## PREFACE BY THE KEEPER OF COINS

THE present Catalogue describes in two volumes (paged continuously) the coinage of the later Roman or Byzantine Empire from the accession of Anastasius I in A.D. 491 to the Fall of Constantinople in 1453. With the exception of some of the specimens arranged under the headings of 'Italian' and 'Provincial' coinages, the coins here catalogued are those that are believed to have been issued by Imperial authority at Constantinople and the other mint-places of the Empire. The coinages of the so-called 'Empires' of Nicaea, Thessalonica and Trebizond, as well as those of the Vandals, Goths, and Lombards, which have often been confused with the true Imperial coinages, are reserved for treatment in a subsequent volume.

The size of the coins is given in inches and tenths, and the weight in English Troy grains. Tables for converting grains into grammes and inches into millimetres, as well as into the measures of Mionnet's scale, are placed at the end of the second volume. Two lists of Emperors, one a brief alphabetical list, the other chronological and more detailed, will be found at the end of the Indexes.

The whole work has been written by Mr. Warwick Wroth, Assistant-Keeper of Coins and Medals, and the proof-sheets have been read by myself and by Mr. G. F. Hill, Senior Assistant in the Department.

H. A. GRUEBER.

BRITISH MUSEUM,  
*February, 1908.*

## INTRODUCTION

### § 1. EXTENT AND ARRANGEMENT OF BYZANTINE COINAGE.

SABATIER, in his well-known work entitled *Description générale des monnaies byzantines*, published in 1862, has dealt with the coinage of the later Roman Empire from the reign of Arcadius onwards. But in choosing this reign as his starting-point he was influenced—as he admits (ch. i, p. 151)—by motives of convenience and the desire to make his book a supplement to Henri Cohen's *Corpus* of Imperial coins. Cohen's descriptions extend to the reign of Romulus Augustulus, but do not embrace the coinages of Arcadius and his successors in the Eastern division of the Empire.

Although collectors and compilers of catalogues have usually followed Sabatier in regarding the reign of Arcadius as the *point de départ* of the later Roman or 'Byzantine' coinage, there is really no historical justification for such a view. It may, no doubt, be convenient for a historian of the later Roman Empire to adopt the year 395 (Arcadius and Honorius) as a starting-point,<sup>1</sup> but (as Prof. Bury remarks<sup>2</sup>) just as there is no question of *two* Roman Empires in the days of Constantius and Constans, so 'the relation of Arcadius and Honorius, the relation of Theodosius II and Valentinian III, the relation of Leo I and Anthemius, were exactly the same as the political relation which existed between the sons of Constantine. However independent one of another, or even hostile, the rulers from time to time may have been, theoretically the unity of the Empire which they ruled was unaffected'.

If this is true of the general political relations of East and West, it is no less true of their financial relations—at any rate so far as coinage is concerned. The coins of both great divisions of the Empire from the reigns of Arcadius and Honorius till the reign of Romulus Augustulus are homogeneous in style, type and fabric, and cannot be profitably studied except as a whole.

The position is simplified when the Emperors of the West (and their mints) disappear from the scene with the resignation of Romulus Augustulus, A. D. 476. This event is coincident with the early part of

<sup>1</sup> Cp. Bury, *Hist. later Rom. Emp.*, i, p. ix.

<sup>2</sup> *Op. cit.*, i, p. vii.

the reign of Zeno (A. D. 474–491), but it seems better to begin a description of the later Roman coinage, not with Zeno but—a few years later—with Anastasius I (A.D. 491–518), who, though he adhered, in the case of his gold money, to the models of his predecessors, instituted an important reform in the bronze coinage and inaugurated the large *folles* (Pl. I. 8, 9) which long remained characteristic of Byzantine coinage.

It may be added that several distinguished numismatists—such as de Sauley (in his valuable pioneer *Essai de Classification des suites monétaires byzantines*, 1836); T. B. Burgon (*Catal. of Pembroke Collection*, 1848, p. 310); Barthélemy (*Rev. num.*, 1863, p. 456); Babelon (*Traité*, i, p. 14), and, apparently, de Salis—have already expressed the opinion that a descriptive catalogue may best begin with the coinage of Anastasius I.<sup>1</sup>

In the arrangement of the coins the important factors are the mint-place, the denomination and the date of issue. An arrangement according to ‘metals’ such as Sabatier adopted can have no scientific justification, and it can hardly be questioned that, both on historical and numismatic grounds, the primary classification, in each Emperor’s reign, must be according to *mints*. Under each mint the coins would probably be arranged most scientifically if they were placed in strict chronological order. Thus, all the coins of year 1 of each Emperor’s reign—of whatever denomination—would be placed together; all those of year 2, of year 3, and so on. But an arrangement of this kind presents some practical difficulties in the case of the catalogue of a large collection; one objection being that the description of each denomination would have to be again and again repeated under each year. It seems best, then,<sup>2</sup> under each mint, to group the coins according to *denominations*, the specimens of each denomination being, of course, arranged chronologically, wherever possible. In this way an important feature—the denomination—is brought into relief, while the chronological sequence is not greatly, if somewhat, obscured.<sup>3</sup> In each reign, therefore, the great bulk of the coinage will be placed first, under ‘Constantinople’; then will follow the coins of Thessalonica; those of the Asiatic mints (Nicomedia and Cyzicus), and then the coinages minted at Antioch, Alexandria and Carthage, in Sicily, and at Rome and Ravenna. Under the mint-heading ‘Constantinople’ (e.g.) we shall have (i) the gold *solidi* (or *nomismata*), *semisses* and *tremisses*, described in their approximate chronological order; (ii) the silver coins; (iii) the bronze coins, which, till the seventh<sup>4</sup> century usually bear their own dates, and can be arranged mechanically year by year.

<sup>1</sup> Cp. also Madden in *Num. Chron.*, 1878, p. 169:—‘the true Byzantine type of coinage commences under Anastasius.’ Cp. Finlay, *Hist. Gr.*, ii, p. 3.

<sup>2</sup> As proposed in a paper on the ‘Study of Byzantine Numismatics’ contributed by the present writer to *Corolla Numismatica* (Oxford, 1906), pp. 325–335.

<sup>3</sup> In a *Corpus* of Byzantine coinage, the arrangement might also be affected by the necessity of noting the different series of *officinae*-marks and even the differences of dies.

<sup>4</sup> Or even the eighth century.

## § 2. HISTORICAL AND NUMISMATIC SUMMARY.

The first ruler whose coins are described in these volumes is Flavius Anastasius, who was proclaimed Emperor in April, 491, in succession to Zeno. Anastasius was an Imperial guardsman (*silentiarius*) and owed his promotion to Ariadne, the widow of his predecessor, whom he married shortly after his accession. There are coins of Ariadne with her portrait, but these were all issued during the lifetime of her first husband.

**ANASTASIUS I,**  
**11 April, 491**  
**—1 July, 518.**

The reign of Anastasius was, on the whole, a prosperous one, though troubled by an Isaurian war, by Bulgarian invasions of Thrace and, especially, by a war with Persia lasting from the summer of 502 till 506, when the Persians restored their conquests in return for a large indemnity. In the religious disputes of his time the Emperor ranged himself on the side of the Monophysites. A rising in 514 in defence of the Orthodox party was headed by the general Vitalian. In the following year Vitalian advanced to Constantinople, defeated the Imperial troops, and compelled the Emperor to come to terms. The coins that have been usually attributed to Vitalian are undoubtedly barbarous pieces of the time of Justin I or later.<sup>1</sup>

**Revolt of Vitalian,**  
**A.D. 514–515.**

Anastasius is described by Procopius (*Hist. arc.*, xix. 2) as *προνοητικώτατος τε ἄμα καὶ οἰκονομικώτατος πάντων αὐτοκρατόρων*. He built for the protection of the Capital the Long Wall stretching from the Sea of Marmora (at Selymbria) to the Black Sea, and rendered service of a rarer kind by giving his personal attention to the details of finance, by abolishing the Chrysargyron, the oppressive tax on receipts that weighed on the humblest of his subjects, and by practising economy in the Court and public expenditure. He was thus able, in spite of the large disbursements of his reign, to leave his successor a treasure of 320,000 pounds of gold.

The great currency-reform of his time was the introduction, in A.D. 498, of the large bronze <sup>2</sup> *folles* of 40 *nummia*, with its smaller denominations of 20, 10 and 5 *nummia* (Pl. I. 7, 10, 11; Pl. II. 1). The new coinage was welcome to the people as taking the place of bronze coins that were usually of very small module, and which had evidently become scarce. It also commended itself by the conspicuous way in which each denomination proclaimed its value on the reverse—**M** = 40; **K** = 20, &c.<sup>3</sup> These

<sup>1</sup> See *infra*, p. 10. The *tremissis* belonging to Mr. J. W. Barron there referred to, is thought (as its owner kindly informs me), by some numismatists who have seen it, to have been altered in the obverse legend, and cannot therefore be claimed as a coin of Vitalian.

<sup>2</sup> In some cases brass rather than bronze: cp. § 3, *infra*.

<sup>3</sup> The passage in the *Chronicon* of Count Marcellinus, under A.D. 498, has been discussed by Mommsen in Pinder and Friedlaender, *Beiträge zur älteren Münzkunde*

coins were struck at the three mints which were in operation under Anastasius—Constantinople, Nicomedia and Antioch. The Imperial gold and silver money, from this reign onwards, is struck chiefly at Constantinople, or at Carthage and in Italy.

Anastasius was succeeded by Justin I, an illiterate man of peasant-birth, but a good soldier and at that time commander of the Imperial Guards. His reign has been described as a mere prelude to the reign of his famous nephew Justinian. In 521 Justinian assumed the Consulship, and by his display of magnificent Games won the favour of the populace.

JUSTIN I,  
1 July, 518  
-1 Aug. 527.

On 1 April, 527, Justinian was created Augustus, and reigned jointly with his uncle till 1 Aug., when Justin died. The coins of the joint rule are now rare, especially the bronze pieces, but the gold coins were probably struck in considerable numbers, as there are two varieties of the solidus, each with its own set of officinae-numerals. The Constantinople mint must have been active during the short period—four months—when these solidi were issued.

Justin I and  
Justinian I,  
joint reign,  
1 April-1 Aug. 527.

The gold coins of Justin I are of rude work, and it is difficult to separate them from the numerous 'barbarian' pieces that bear the name and head of IVSTINVS (see *infra*, p. 21). A silver coin with the name of 'Justin' (*rev.*, FELIX CARTA), assigned by Sabatier to Justin I, is probably a Vandalic piece (*infra*, p. 13, n. 2, and p. 21).<sup>1</sup>

(Berlin, 1851), p. 123 f.; cp. p. 135 f. and in his *Hist. monn. rom.* (ed. Blacas), iii, p. 100; cp. p. 108; see also O. Seeck in *Zeit. f. Num.*, xvii, p. 164; Finlay, *Hist. Gr.*, i, p. 445; Babelon, *Traité*, i, p. 770. The text in Roncallius, *Vet. Lat. Script. Chron.* (1787), p. 305 = *Mon. Germ. H.* xi, p. 95 is:—'Nummis quos Romani Terentianos vocant, Graeci follares, Anastasius princeps suo nomine figuratis placibilem plebi commutationem distraxit.' The text apparently contains several corruptions. Scaliger and later critics read *placibilem* for *placibilem*: for *follares* is read *phollares* (Babelon) or *phollerales* (Scaliger); for *Terentianos* or *terentianos* some read *teruncios* or *teruncianos*; for *commutationem* Nipperdey proposed *computationem direxit*. Mommsen, who was inclined to read *commutationem instruxit*, supposed the passage to mean that Anastasius marked each coin with its respective name (*suo nomine figuratis*), i.e. with its mark of value, M, K, &c., and thereby introduced a change that was welcome to the common people. Pinder and Friedlaender (*Beiträge*, p. 135 f.) declare that *suo nomine figuratis* must mean that Anastasius issued coins stamped with his own name. The words may certainly (and perhaps more easily) bear this latter meaning (subsequently adopted by Mommsen, *Hist. monn. rom.*, iii, p. 101), but the passage thus translated seems to lose its force, because the novelty or reform introduced by Anastasius was surely not the stamping of coins with the Imperial name or monogram—a thing done by his predecessors—but the stamping them with their marks of value in a conspicuous manner. Another reading that has been proposed by Mommsen (*ap.* Pinder and Friedlaender, p. 135) is *implacabilem plebi commutationem distraxit*, i.e. 'die bisherige dem Volke unbequeme Art des Münzverkehrs beseitigte der Kaiser.'

<sup>1</sup> The alleged representation of EUPHEMIA, the wife of Justin I, on the reverse of a small bronze coin of her husband (Sab., i, p. 167, No. 59; cp. *Mém. Soc. arch. St. Pét.*,

The close of the year 527 ushers us into the spacious times of Justinian, of Belisarius and Tribonian. The character of Justinian was one strangely compounded of elements of strength and weakness, and even his ability has been depreciated as of a mediocre type. Yet he was certainly the cause of greatness in others, and was himself inspired with an exalted, or at least grandiose, sense of the dignity of Empire. His great ideals were those of Imperial and Christian unity<sup>1</sup>—ideals to be attained by the re-conquest of the ancient Empire of Rome and by the organization and surveillance of State and Church in every detail.

JUSTINIAN I,  
1 Aug. 527  
-14 Nov. 565.

Yet Justinian, the law-giver and diplomatist, the theologian, the master-builder of church and fortress, the patron of the Arts, hardly here concerns us, and it is remarkable that his coinage so imperfectly reflects the general artistic achievements of his reign. He did nothing to improve its mechanical execution or to vivify its reverse designs, though he certainly made an effort in the direction of portraiture so far as his own head is concerned.<sup>2</sup> But the head of Theodora is absent from his coins, though the representation of an Empress had for centuries been familiar on Roman coins, and though his immediate successor (Justin II) associated his wife with himself on most of his obverses. It is the more remarkable because Theodora had immense political influence and shared to the full her husband's Imperial honours. Her name in inscriptions accompanies that of Justinian; mosaic portraits and statues of her were everywhere displayed.<sup>3</sup>

But Justinian the organizer of victory has left ineffaceable traces on the coinage, and in place of the five mint-centres of Justin I we have the eleven or twelve mints of Justinian. The conquest of northern Africa, of Sicily and Italy, made Carthage, Catina,<sup>4</sup> Rome and Ravenna Imperial mints which will interest us till they are lopped off one by one, through the loss, in the seventh century, of Africa; of Sicily in the ninth century; of Italy in the eighth and the eleventh centuries.<sup>5</sup> We are concerned, moreover, with Justinian on account of the great attention that he paid to

iv, p. 293) is in the highest degree doubtful. I suspect the coin to be a badly preserved example of the piece with *rev.*, Tyche of Antioch, like Pl. IV. 4, *infra*; cp. de Saulcy, *Essai*, p. 11.

<sup>1</sup> Cp. Diehl, *Justinien*, pp. 21, 22.

<sup>2</sup> Justinian's portrait is discussed, *infra*, § 4, Period I.

<sup>3</sup> Diehl, *Justinien*, pp. 52, 53, and his *Figures byzantines* (1906), 'Théodora,' p. 67.

<sup>4</sup> This was probably the mint of Sicily as was certainly the case under later Emperors.

<sup>5</sup> Cp. Bryce, *Holy Roman Empire*, chap. xvii, p. 318 f., ed. 1904. Justinian has been sometimes reproached for making these re-conquests instead of confining himself to the wiser policy of strengthening his Eastern provinces. But, as Prof. Diehl has remarked (*Justinien*, p. 662), he could not foresee the future. Justinian was not a mere Byzantine ruler but, in his own belief, the heir of the Caesars, bound to recover, if he could, his glorious heritage.

economics, at least as understood by him.<sup>1</sup> His reign, in spite of grinding taxation, of devastating plague (A.D. 542), of extravagant expenditure and maladministration of the public finances, witnessed a great development of commerce. His coinage is remarkably abundant and was evidently regularized with care. This was especially the case with the bronze money which, from his twelfth year (i.e. A.D. 538/9) onwards, is made to indicate by regnal years the date of issue, so that at the mints of Constantinople, Nicomedia and elsewhere we can follow the currency year by year.

Constantinople. The principal mint, as at all periods, was at the capital. Under Justinian, though not in most later reigns, the issue of gold was confined to this centre, nor was silver elsewhere coined, except at Carthage. The important city of THESSALONICA, and the Asiatic cities, NICOMEDIA and CYZICUS, continued to issue

bronze on the model of Constantinople.<sup>2</sup>

Antioch. The usual legend on the coins is 'Theoupolis',<sup>3</sup> a name assumed by the city after the disastrous earthquake of 29 Nov. 528.

ANTIOCH. The name 'Antioch' is not found on the coins after this period though of course it was never really superseded by the new name. After the destruction of the city by Chosroes in June 540, it was rebuilt and beautified by Justinian.<sup>4</sup> We shall note in later reigns that in this great city of Greeks, Syrians and Jews, Latin seems to have been imperfectly understood by the Antiochene die-engravers, and even under Justinian the Latin legends are sometimes most barbarously reproduced.

Alexandria. This mint, after having been long dormant, once more comes into operation.<sup>5</sup> It was never important, its coins being usually small bronze pieces, undated, and, as time advances, of barbarous style. The highest denomination is IB (12 nummia).

Carthage. The conquest of Africa necessitated a new coinage, and the establishment of a mint at Carthage, the capital. Carthage had fallen

CARTHAGE. into the hands of Belisarius shortly after his victory at Decimum, 13 Sept. 533. The native chieftains hastened to make their submission, and Belisarius disbursed large sums as presents. It is possible that the issue of a silver coinage may have taken place at once (the coins with CONOS = CONOB, p. 63, *infra*), but the minting of the bronze (marked KART), and, it may be, of the silver, was probably not carried out till about Sept. 534, when the organization of the

<sup>1</sup> Diehl, *Justinien*, p. 534.

<sup>2</sup> Thessalonica, however, has denominations peculiar to itself, *infra*, p. 43.

<sup>3</sup> See the Catalogue, *infra*, p. 53.

<sup>4</sup> Procop., *De aedif.*, ii, 10; v, 5.

<sup>5</sup> The coins assigned by Sabatier to Justin I, seem to be better attributed to Justin II; see *infra*, p. 62, note 2.

new province was proceeding. Africa was placed under a Praetorian Prefect who had his official residence at Carthage. This city was also the residence of the African commander-in-chief (*magister militum*).<sup>1</sup>

It was perhaps in this year (A.D. 534), the date when Belisarius celebrated at Constantinople his triumph for the overthrow of the Vandals and king Gelimir, that the enormous gold medallion, formerly in the French Collection (see frontispiece, vol. I and p. 25, *infra*), was produced, no doubt, at the mint of Constantinople.

Sicily. The conquest of this island by Belisarius followed hard upon his African success. By the end of 535, Sicily became an Imperial province under the governorship of a praetor (*στρατηγός*). Its scanty bronze coinage does not seem to be earlier than A.D. 538.<sup>2</sup>

#### SICILY.

There are numerous gold, silver and bronze coins bearing the name of Justinian which can be identified by style, &c., as the products of an Italian mint. (In some cases ROMA is named on the coins). The difficulty is to determine whether these coins, or any of them, were struck by the Imperial mint-masters.

#### ITALIAN MINTS. i. ROME.

Speaking broadly, and without dwelling on details partly discussed *infra*, pp. 73, 74, it may be said that several considerations lead one to suppose that the whole of these coinages, with the exception of a few bronze and possibly a few gold pieces, are not Imperial but Ostrogothic. A comparison of the heads of Justinian on these coins (silver and bronze) with the heads of the same Emperor on undoubted Ostrogothic coins (i.e. those with the King's name or monogram), suggests that the entire series was issued under the same (Ostrogothic) authority.

From the accession of Justinian in 527 till the taking of Rome by Belisarius in 536 the Imperialists had no foothold in Italy, and it was not till 552, on the defeat of Baduila (Totila) and the Ostrogoths by Narses, that Italy really became Imperial.<sup>3</sup> There was thus ample time and opportunity for the Ostrogothic mints to continue their operations.

If, moreover, we consider the output of the mint of Rome in the reign of Justin II and other immediate successors of Justinian, we find that its issues are exceedingly scanty and chiefly confined to bronze pieces of the denominations XX and X.<sup>4</sup> No doubt a great mass of Ostrogothic coins bearing the name of Justinian long remained in circulation, and even continued to be imitated over a long series of years, but it is certain

<sup>1</sup> See Diehl, *L'Afrique byzantine*, especially pp. 40 f., 97, 116, &c.

<sup>2</sup> The coins are undated, but have the full-face obverse which was first introduced on Justinian's coinage in A.D. 538/9.

<sup>3</sup> The struggle did not even quite end till 555. Gregorovius, *Hist. Rome*, i, p. 483, Eng. trans.

<sup>4</sup> There are some solidi and a tremissis that may possibly be Imperial issues of Justinian, but this is very doubtful; see *infra*, pp. 73, 74.

that the Imperial Roman mint was not important under the immediate successors of Justinian, and it is probable that in his reign it had not assumed a position of any significance.

The only coin assigned in this work to the Roman mint is the bronze piece (p. 70), marked **XX**, which is dated year 26, i.e. A.D. 552/3, the year of the practical conquest of Italy.<sup>1</sup>

Ravenna. This city passed from the Ostrogoths to Belisarius in 539/40, but money does not seem to have been coined there till about fifteen years after this event. The establishment of the Exarchate of Ravenna apparently dates only from the reign of Maurice Tiberius (A.D. 584).

**CHERSON AND UNCERTAIN MINTS.** Cherson and uncertain mints. Justinian had various friendly relations with the interesting city of Cherson,<sup>2</sup> which was an outpost of commerce, an oasis of Hellenic civilization, in a desert overrun by barbarian Huns. Some small bronze coins, no doubt of 5 nummia, have been attributed to it. They bear the head of Justinian, and on the reverse a monogram which may be read as the name of Cherson.<sup>3</sup> This coinage was scanty and unimportant, though it is possible that it may have been supplemented by the somewhat similar bronze pieces described, *infra*, pp. 72-73, under 'Uncertain Mints'.

Corsica and Sardinia, which fell to the Empire along with Africa, seem to have had no independent mints. So long as Carthage remained Imperial these islands doubtless used the coins that emanated from that centre.

Nor do the successes of Justinian in south-eastern Spain (from A.D. 554) seem to have led to the establishment of Imperial mints, for the gold coins with the name of Justinian which are discovered in Spain appear to be chiefly the currency of the Visigoths.<sup>4</sup>

Justinian died on 14 Nov. 565, and his successor was his nephew, Justin II. He was married to Sophia, niece of Justinian's wife, Theodora. The conspicuous events of the reign of Justin II<sup>5</sup> and of his successors Tiberius II and Maurice Tiberius are concerned with the exhausting struggle with the Persians; with the devastation of the Balkan Peninsula by Slavs and Avars; and the conquests (from A.D. 568) of the Lombards in Italy.

<sup>1</sup> Even to this coin Ravenna may have a claim; see *infra*, p. 70, note 1. In 554 the Emperor confided to the revived Senate of Rome the supervision of weights and measures. The governor of Rome at this time was the *praefectus urbis* nominated by the Praetorian Prefect. Cp. Diehl, *Études sur l'administration byz. dans l'exarchat de Ravenne*, p. 125 f.

<sup>2</sup> Cp. Procop., *De aedif.*, iii, 7. See *Byz. Zeitschrift*, iv, 397.

<sup>4</sup> Cp. F. Görres, 'Die byzantinischen Besitzungen an den Küsten des Spanisch-Westgotischen Reiches (554-624)' in *B. Z.*, 1907, p. 515 f. <sup>5</sup> Bury, *Hist.*, ii, p. 67 f.

The general disintegration of the Empire reaches a climax in the reign of Phocas<sup>1</sup> (A.D. 602–610), but in the course of the seventh century the Empire is rescued from destruction and revived by the energy of Heraclius.

During the last four years of his life Justin II was insane, but in a lucid interval in Dec. 574 he created Tiberius II Caesar, and, till the death of Justin II in 578, Tiberius ruled (as a subordinate co-regent) with the Empress Sophia.

Sophia, unlike her aunt Theodora, assumes a prominent place on the Imperial coinage from the very first year of Justin's reign; the usual type of the bronze coins being a group of the Emperor and Empress enthroned (Pl. XI. 8–11). She does not appear on the gold and silver. On the coins of Carthage, not only the effigy but the name of the Empress is added to that of her husband, in the inscription DN IVSTINO ET SOFIE VITA (p. 99, *infra*). Perhaps these figures reproduce actual statues such as those which are known to have stood in public places at Constantinople—statues of Justin II and Sophia, of his daughter Arabia and of Helena his niece.<sup>2</sup>

The Empress  
Sophia.

During this reign all the mints of Justinian continue in operation, and gold coins seem also to have been struck at Ravenna. At the Capital, a new reverse type is introduced on the *solidus*, a seated figure of Constantinople (Νέα Πόλις: Pl. XI. 1). John of Ephesus<sup>3</sup> says that on his 'daries' (i. e. *solidi*) Justin 'introduced a female figure which was generally compared to Venus', but that his successor Tiberius II discontinued this design and, in accordance with the dictation of a vision, caused the Cross to be represented on the reverse of his coins. It seems strange that the armed and draped figure of Constantinople should have been mistaken, even by the most ignorant, for the Goddess of Love, yet John's statement is at any rate correct as to the reverse-type substituted by Tiberius.<sup>4</sup>

The coins of Antioch are remarkable for the entirely barbarous legends of the obverses, which must have been prepared by engravers who were unacquainted with Latin.

At Carthage, the variety of types is noteworthy. We know that in Justin's reign some special care was bestowed on the administration of Africa and the regulation of its finances. Carthage erected statues in honour of this Emperor.<sup>5</sup> The silver coins (Pl. XIII. 3) bear

<sup>1</sup> Bury, *op. cit.*, ii, p. 68.

<sup>2</sup> Unger's *Quellen der Byz. Kunstgesch.*, pp. 251, 263.

<sup>3</sup> iii, 14, trans. R. Payne Smith.

<sup>4</sup> On the *obv.* of his *solidi* Justin II holds the globus surmounted by a Victory offering a wreath: on the *solidi* of Justinian I the Emperor holds the globus cruciger. The Victory introduced by Justin may be compared with the wreath-bearing Victory that surmounted the Imperial throne of Justin II; cp. Corippus, *In laud. Iust.*, iii, 201 f.; Bayet, *L'Art byz.*, p. 94.

<sup>5</sup> Diehl, *L'Afrique byzantine*, p. 458 f.

the legend FELIX RESPVBL(ica) and Justin's panegyrist Corippus declares:—

Felix est totus Iustino principe mundus ;<sup>1</sup>

but probably this particular inscription was suggested by the FELIX CARTHAGO of the Vandalic coinages.<sup>2</sup>

Tiberius II, Constantine,<sup>3</sup> Count of the Excubiti, who had been appointed Caesar by Justin II in Dec. 574, became Augustus and sole Emperor in Sept. 578, in the month preceding the death of Justin II. In the dates on his coins he usually reckons his 'reign' as beginning with his Caesarship, but there is no evidence that decisively proves that he struck money till he became sole ruler and Augustus.<sup>4</sup> His wife Anastasia now received Imperial honours and took the place of his former co-regent, the widowed Empress Sophia (cp. *obv.* of coins of Thessalonica, Pl. XV. 2, Tiberius II and Anastasia).

Tiberius merited praise as a ruler for the attention which he paid to the army and for his remission of taxation throughout the Empire. But his popularity was largely achieved—to the great detriment of the Imperial treasury—by the most extravagant donations to all sorts and conditions of men. One of the most politic of his gifts was the presentation to Chilperic, King of the Franks, of gold coins or medallions each of a pound's weight (cp. *infra*, p. 105).

The election of Tiberius to the (sole) consulship gave occasion at Constantinople and several provincial mints for a new obverse type representing the Emperor in Consular dress. The earliest of these coins belong to 578/9 (regnal year '5'). The bronze coins of this type are large and well struck, and the solidus is of relatively good work (Pl. XIV. 5; XVI. 3; XIII. 20). We have already noticed (p. xix, *supra*) that he introduced a sacred reverse-type—the Cross—on all denominations of his gold money. Another innovation was the introduction of a bronze piece of XXX nummia.

Tiberius died on Aug. 13, 582. A few days earlier (Aug. 5), realizing that he was dying, he had elected as his successor Mauricius, the Count

<sup>1</sup> Corippus, *Paneg. in laud. Anastasii*, l. 33; ed. Partsch. At the *processus* of Justin II's Consulship, the Senate (according to Corippus, *In laud. Iust.*, iv, l. 130 f.) saluted the Emperor-Consul with cries of 'Vincas' and 'Consule te felix, te princeps, floreat orbis'.

<sup>2</sup> Corippus, *Iohann.*, vi (v), 58, 59, 'felix Carthago Iustiniana.' Cp. *Felix Roma* the favourite motto of the Ostrogoth Theodoric: 'Regnante Theodorico Domino nostro felix Roma' (Gregorovius, *Rome*, Book II, chap. ii, pp. 315, 316, Eng. trans.).

<sup>3</sup> The name of Constantine had been bestowed on Tiberius by Justin II when he appointed him Caesar; John of Ephesus, iii, 5, 10, 23; *Chron. Pasch.*, p. 376 A, cited by Clinton, *Fast. Rom.*, p. 834. As to the name on the coins, see *infra*, p. 130 n.

<sup>4</sup> On the difficulties of the dating on the coins see the discussion, *infra*, p. 125.

of the Foederati (barbarian auxiliaries), a good general who had recently returned from the campaign in Persia.

Maurice—who had assumed the additional name of Tiberius—had a reputation for piety and moderation. He was stigmatized as avaricious, but he seems only to have practised a wise economy which contrasted strongly with the lavish expenditure of his predecessor. Until the peace of A.D. 591, the Persian War was a perpetual drain upon his resources, while he was further harassed, during his twenty years' reign, by the struggle with the Avars and Slavs.

MAURICE  
TIBERIUS,  
13 Aug. 582

—22 Nov. 602  
(d. 26 or 27 Nov.).

His unsympathetic treatment of the army, or perhaps his disciplinary zeal, led to a revolt in which the centurion Phocas took a leading part. Phocas marched on Constantinople and Maurice fled to Chalcedon, but was captured and put to death by Phocas on 26 (or 27) Nov. 602.

The mints of this reign continue as before, and the coinage is abundant. At THESSALONICA, the flourishing city where the Prefect of Illyricum resided, the dated coinage extends from the second to the last year of the Emperor's reign, but there are apparently no coins of years 16, 17, 18, i.e. from A.D. 597/8 to A.D. 599/600. It seems to have been in the year 597 that the city experienced a siege at the hands of the Avars.<sup>1</sup>

The coinage of CARTHAGE—partly dated by Indictions—is fairly important. In this reign the Exarch of Africa (in place of the *Magister militum Africae*) is mentioned (A.D. 591) for the first time. The Exarchs were selected judiciously by Maurice, and they governed and defended the country with success against native risings. The insurrection of 595 was the last revolt of the Africans against the Byzantine authority.<sup>2</sup>

The coinage of Rome continues to be very scanty, but that of Ravenna is more important: the Exarch of Ravenna was apparently first created in this reign, *circ.* A.D. 584.<sup>3</sup>

The bronze of Sicily, now marked with the mint-name Catina, becomes more abundant, and was issued during many years of the reign.

The Lombard and Gaulish imitations of the coinages of Maurice<sup>4</sup> lie beyond the limits of this work, though they illustrate the history of his reign. The Duchies of Spolegium and Beneventum had already been formed by Lombard chiefs, and from 584 onwards the Lombardic conquests in northern Italy began to be consolidated and completed. Against the Lombards Maurice sought the help of the Franks, and sent a subsidy of 50,000 solidi to Childebert, whom he saluted as his 'son'.

The somewhat interesting family coinage of Maurice Tiberius must be

<sup>1</sup> Bury, *Hist.*, ii, p. 134 f. Thessalonica was thrice besieged in the seventh century.

<sup>2</sup> Diehl, *L'Afr. byz.*, pp. 478, 482.

<sup>3</sup> Bury's Gibbon, iv, p. 545; Diehl, *L'Exarchat de Ravenne*.

<sup>4</sup> Cp. p. 161, *infra*.

noticed. It consists (i) of bronze coins (Pl. XX. 1) bearing the figures of the Emperor and his wife Constantina (the daughter of Tiberius II, Constantine), and—on the *reverse*—their son Theodosius, represented in youth or manhood. These coins were struck at Cherson, which, though commercially important and tenacious of its old Hellenic independence, was never one of the great mints of the Empire and had apparently issued coins hitherto only under Justinian I.<sup>1</sup> It is probable that Maurice had some special connexion with this city, and that the issue of coins from its mint was intended as a compliment, on one side or the other.<sup>2</sup> (ii) There are silver coins of Carthage bearing the name of Theodosius (Augustus) only. On one type of these (Pl. XX. 3) are three busts which may be best identified as those of Theodosius and of his father and mother.

As to the date of these family coins: Theodosius was born 4 Aug. 584. A few years later (about 589?) he was created Augustus. This is the earliest date at which these coins can have been struck, but unless we are to assume that the representation of Theodosius is purely conventional (a child represented as youth or man), it is better to place the issue a few years later when the precocious Augustus was at any rate about twelve or thirteen. Perhaps the issue of the coins took place about 596/7 when Maurice made a remarkable will by which he bequeathed the Empire to his sons. The share assigned to Theodosius as the eldest was Constantinople and the East. The coins are not likely to have been struck so late as 601/2, because in that year Theodosius was very much in disgrace with his father (who, indeed, chastised him with rods) on account of his connexion with Germanus, who was charged with rebellion against the Emperor. Theodosius was put to death by Phocas in 602, shortly after his father. His mother Constantina was imprisoned, and put to death in 605.

Phocas, who had been crowned Emperor on 23 Nov. 602, shortly before his execution of Maurice Tiberius, was an ignorant and brutal soldier, regarded by his contemporaries as a sort of monster—the ‘New Gorgon’. His very appearance was repulsive, and Cedrenus<sup>3</sup> describes him as short and deformed, with red hair and shaggy eyebrows that met together (but with a shaven chin),<sup>4</sup> and a face disfigured by an ugly scar which darkened in moments of anger. On his coins (Pl. XX. 4, &c.) Phocas

PHOCAS,  
23 Nov. 602  
—4 Oct. 610.

<sup>1</sup> Cp. p. xviii, *supra*.

<sup>2</sup> The inscription in Boeckh, *C. I. G.*, vol. iv, No. 8740, mentions the restoration of the palace (καισάριον) in Bosphorus which Eupaterios, στρατηλάτης καὶ δοῦξ Χερσῶνος, undertook at the expense of a Byzantine Emperor. According to Latyshev (cited *B. Z.*, iv, 1895, p. 397) the Emperor in question is probably Maurice Tiberius and the date A. D. 590.—To the references to the Cherson coins on pp. 158, 159, *infra*, add A. V. Oreshnikov, ‘Chersono-Byzantine Coins,’ printed in vol. iii of the *Transactions of the Moscow Numismatic Society*, Moscow, 1905, Pl. VIII. 5–12.

<sup>3</sup> P. 404 = i, 708, ed. Bonn.

<sup>4</sup> Σύνοφρός τε καὶ τὸ γένειον κειρόμενος.

has an unkempt, almost ruffianly appearance: he is always represented bearded,<sup>1</sup> so that the description of Cedrenus must, in this particular, be inaccurate.<sup>2</sup> We may rely all the more on the testimony of the coins because, in this case, a bearded Emperor is a deliberate innovation on the beardless type of the previous reigns. Moreover, the leaden seals of this Emperor have the same legend and bearded bust as the coins.<sup>3</sup>

During the earlier years of his rule Phocas places on the bronze coins the two standing figures of his wife Leontia and himself, Leontia being usually nimbate.<sup>4</sup> The coinage as a whole was fairly abundant, and was struck at nine mints. Many of the bronze pieces are restruck, chiefly on the coins of Maurice Tiberius.

'The reign of Phocas' (says Gibbon) 'afflicted Europe with ignominious peace and Asia with devastating war.' The peace was that which was concluded with the Avars in 604, when at the same time the Imperial tribute to them was increased. The Persian war was especially disastrous. In 606-607 the Persians overran western Mesopotamia and Syria, and in 608 their army advanced across Asia Minor to Chalcedon so that blazing villages could be seen from Constantinople itself.

The tyranny and stupidity of Phocas increased the disorders of a troubled period. His endeavour to constrain his Jewish subjects to accept the Christian sacrament of Baptism led to serious revolts (A.D. 609) in Antioch and Alexandria.<sup>5</sup> The many conspiracies of the reign were successfully repressed by him, but, finally, on 4 Oct. 610, a new rival, Heraclius, the son of Heraclius the elder, the venerated Exarch of Africa, defeated the Emperor's fleet. The tyrant was put to death, and Heraclius was proclaimed Augustus and crowned by the Patriarch in Constantinople on Oct. 5.

A coinage of solidi (*νόμισματα*), now very scarce, was evidently prepared in haste for circulation with the name of Heraclius. This *νόμισμα* was closely modelled upon the corresponding coin of Phocas, and the portrait is not distinguishable from that of Phocas (see *infra*, p. 184, note 3; Pl. XXIII. 1). But Heraclius soon instituted a new *νόμισμα*

**HERACLIUS,**

5 Oct. 610

-11 Feb. 641.

<sup>1</sup> On the Constantinopolitan semisses and tremisses he is beardless, but the obverses of these denominations are purely conventional and are repeated from reign to reign. On the corresponding Ravenna pieces Phocas is usually given a beard.

<sup>2</sup> Unless possibly it means that the beard on his chin was trimmed [cp. the pointed beard of the coins] but not *clean* shaven.

<sup>3</sup> Schlumberger, *Sigillogr.*, p. 420; Konstantopoulos in *Journal internat. d'arch. num.*, 1903, p. 70. A steelyard weight in the British Museum having the form of a bearded Emperor has been identified with probability, on comparison with the coins, as Phocas: see Dalton, B. M. Cat., *Early Christian Antiquities*, No. 485.

<sup>4</sup> Cp. Gibbon, v, p. 64, ed. Bury:—'The images of the Emperor and his wife Leontia were exposed in the Lateran to the veneration of the clergy and Senate of Rome.'

<sup>5</sup> Of Alexandria there are a number of extremely barbarous coins which appear to belong to this reign.

on which the cross potent (already found on the tremissis of Phocas, but without steps) takes the place of the figure of Victory. From his third year onwards variations in the obverse type in all metals become frequent. Most commonly Heraclius appears with his young son Heraclius Constantine, who was born in May, 612 and crowned Augustus in 613. His son (by Martina, his second wife) Heraclonas, who was born in 615 and crowned Augustus in 638, appears on the coins with his father and elder brother, but not (at Constantinople) before the year 639/40.<sup>1</sup> When the Empress Martina is seen it is in conjunction with her husband and her stepson Heraclius Constantine.

These family groupings are represented quaintly but not without a touch of artistic feeling (see Pl. XXIII. 7, 10; XXIV. 10), and it may be said that the engraving of the gold and silver coins of Heraclius (at any rate at Constantinople) is throughout fairly neat and skilful. Heraclius himself, according to the description in Cedrenus,<sup>2</sup> was a man of middle height, strongly built and broad-chested, with fine eyes and yellow hair: he had a long bushy beard, but when he became Emperor he shaved. The coins represent him in A.D. 610 with a pointed beard like Phocas,<sup>3</sup> but shortly afterwards with a close beard (Pl. XXIII. 1 and 2). From about 629/30, the twentieth year of his reign, he presents a grotesque appearance with a long flowing beard and a moustache of enormous extension (Pl. XXIII. 9).

The earlier years of the reign of Heraclius were times of grievous disaster for the Empire. Persia was, indeed, a *vetus hostis*, but its hostility was now productive of unexampled misfortune. Phocas had lost Mesopotamia; but Asia Minor was now overrun by the Persians right up to Chalcedon. Syria was attacked, and in 611, Antioch, and in 614, Jerusalem were captured.<sup>4</sup> A precious relic, the Holy Rood, was carried off to Persia. The new coin-legend, *Deus adiuta Romanis*, first adopted on the silver of 615,<sup>5</sup> must have had an almost pathetic significance. In 617 the Persians captured Alexandria and robbed the Empire of 'Egypt', the granary of Constantinople. But in 622 there came a change. Heraclius had proclaimed a crusade which was welcomed with something like national enthusiasm. The churches of Constantinople lent their plate and treasure, and the free doles of corn to the populace were discontinued. The Emperor himself commanded in person, and by a long series of campaigns lasting from 622 to 628<sup>6</sup> completely shattered the power of Persia.

<sup>1</sup> On coins of Rome (p. 243, *infra*) Heraclonas appears A.D. 622/3.

<sup>2</sup> Bury, *Hist.*, ii, p. 208.

<sup>3</sup> No doubt a fancy portrait; see p. xxiii, *supra*, and *infra*, p. 184, note 3.

<sup>4</sup> Pernice, *L'Imp. Heraclio*, p. 64, note.

<sup>5</sup> Τοῦτω τῷ ἔτει (615) γέγονεν ἀπὸ νόμου νόμισμα ἐξαγράμμον ἀργυροῦν, καὶ βασιλικαὶ ῥόγαι δι' αὐτοῦ γεγόναι καὶ κατὰ τὸ ἥμισυ τῆς ἀρχαιοῦτος, *Chron. Alex.*, vol. i, p. 706, ed. Bonn.

<sup>6</sup> So Pernice, *op. cit.*, p. 57. In 626 a formidable but unsuccessful attack was made upon Constantinople by the Persians allied with Avars and Slavs.

In 628 the Persian King Chosroes died. His son made submission to Heraclius and peace was established. In the following year (629) the Empire was again in possession of Egypt and of the other provinces of which Persia had deprived it. The Holy Rood was given back to Heraclius and was solemnly reinstated by him at Jerusalem (A.D. 629).<sup>1</sup> The long cross seen on the coins of A.D. 629/30 in the hands of the Emperor may perhaps be not a mere cruciform sceptre but the Rood itself (Pl. XXIV. 5; XXVII. 20; *infra*, p. 234).

But a power more formidable than the Persian was already rising, and at a time when the Empire was exhausted by long warring and drained by new taxation, the great Islamic movement under Mohammad had to be reckoned with. In 634 the Arab conquest of Syria began. Damascus, Antioch and Jerusalem fell into the hands of the Saracens, and by 638 the conquest was complete. The Arab invasion of Egypt was reserved for the last melancholy years of the reign of Heraclius, and its capital Alexandria did not fall till some time after his death, which took place on 11 Feb. 641.

During this long and momentous reign no less than twelve mints were in operation, but no important changes were made in the coinage beyond the issue of the 'silver Hexagram' (= double miliaresion), a piece of six scripula, extant specimens of which weigh a little over 100 grains Troy. A curious feature of the bronze coinage, probably significant of an ill-supplied treasury and of careless administration, is the constant evidence of restriking. Instances in which new *flans* were prepared for the coinage of Heraclius are probably exceptional; the general rule being to utilize as *flans* any older coins that came to hand, especially those of Tiberius II Constantine, Maurice Tiberius and Phocas. Restriking has been noticed in previous reigns, but under Heraclius it was particularly extensive and slovenly. Little or no attempt is made to obliterate the first types, and the original dates and mint-names are often more conspicuous than those impressed by Heraclius. Sometimes the old coin restruck by Heraclius has itself been originally restruck. In Sicily, the large **M** coins of the fifth and sixth centuries (Anastasius I—Justinian I) and certain coins of Heraclius himself, struck at various mints, were reissued with no alteration beyond two countermarks which showed the reigning Emperor's head and the name of 'Sicily' (Pl. XXVIII. 3, 4, &c.). A curious parallel may be found in the history of the English coinage under George III, when the government of the day—as a makeshift for a much-needed new issue of five-shilling pieces—put into circulation a great mass of Spanish dollars, countermarked either with G. R. (Georgius rex) or with a small head of George III.

Of the twelve mints, the most important was CONSTANTINOPLE, where

<sup>1</sup> On the date of the restoration of the Rood, see Pernice, *op. cit.*, pp. 317 f., 174 f.

a long and nearly unbroken series of dated coins was issued from the first to the thirtieth year of Heraclius. In bronze, the Mints of Heraclius. only important denomination was the follis (marked **M**). The succession of the types can be studied conveniently on the dated bronze pieces of this mint. In years 1 to 3 we find Heraclius alone; from year 3 to 5, Heraclius and his son Heraclius Constantine; from year 6 to 19, the group of Heraclius, Heraclius Constantine and Martina. In year 20 (= A. D. 629/30) there is a new variety—Heraclius in *military* dress and Heraclius Constantine. In year 30 (A. D. 639/40) we find the three figures of Heraclius, Heraclius Constantine and Heraclonas.

CARTHAGE in this reign is also a mint of considerable importance. Heraclius as the son of an exarch of Africa had a peculiar regard for the province, and at one time contemplated the substitution of Carthage for Constantinople as his capital. Under Heraclius, Africa was prosperous and peaceful, though towards the end of his reign the disorganization of the province had already begun, and the Berbers and other native peoples were asserting their independence.<sup>1</sup> The African coins present several peculiarities, especially the representation of Heraclius and his eldest son in the guise of Consul. The first appearance here, circ. A. D. 629, of a Greek legend—**EN TOΣTO NIKΑ**—is also noteworthy.

ALEXANDRIA has a varied and somewhat curious coinage. The capture of the city by the Persians took place at the end of A. D. 617,<sup>2</sup> but in 627/8 the Persians evacuated Egypt, and the Imperial supremacy was restored and confirmed by the peace of 629. It is strange that there should be coins (see *infra*, p. 224, **M**) that bear dates from 622/3–623/4, and thus fall within the period of Persian rule. The undated coins (*infra*, p. 224; Pl. XXVI. 7, 8) with the star and crescent on the obverse are also remarkable,<sup>3</sup> and these symbols may perhaps commemorate the victory over the Persian king Chosroes, whose emblems they were;<sup>4</sup> and if this is the right interpretation the coins were probably struck in 628, the year of the death of Chosroes, or in 629.

The Persian invasion of Egypt was to be followed, after some years interval, by the still more important attack of the Arabs. This latter invasion began in Dec. 639,<sup>5</sup> and in June 641 (i. e. a few months after the death of Heraclius) Alexandria was attacked. It capitulated in Nov. 641, and was finally evacuated by the Romans in Sept. 642. At the end of 645 the city was retaken by the Romans, but was finally regained by the

<sup>1</sup> Diehl, *L'Afr. byz.*, p. 517 f. In Spain, most of the Imperial possessions were lost in A. D. 616 and again 621–631; Diehl, p. 531.

<sup>3</sup> Notice also the crown with cross in crescent on No. 276, p. 224, *infra*.

<sup>4</sup> Cp. Froehner, *Annuaire de la soc. franç. de Num.*, 1890, p. 472 f.

<sup>5</sup> Butler, *op. cit.*, for this and the following dates.

Arabs in the summer of 646. It will thus be seen that there was opportunity for the intermittent activity of the mint of Alexandria during the earlier years of Constans II, the successor of Heraclius. I have not, however, ventured definitely to assign coins to his reign, though, as indicated, *infra*, p. 227, some of the more barbarous pieces described under 'Heraclius I, Alexandria' may have been issued A.D. 641-646, and thus during the reign of Constans. It seems likely that with the Arabian conquest in the summer of 641 the mint came to an end. Yet it is just possible that some of the coins with apparently barbarous legends, ΠΑΝ, ΠΟΝ, &c. (*infra*, p. 227), may have emanated from Alexandria even under the domination of the Arabs; for under the new rulers the old civil administration of Egypt was, on the whole, maintained unaltered, and many official posts were even filled by Coptic Christians.<sup>1</sup>

The coinage of Rome is insignificant; that of Ravenna in gold, silver and bronze of much greater importance. In Sicily we have already observed (p. xxv, *supra*) the issue of old *folles* stamped with the Emperor's countermark. The smaller denominations in bronze were struck at Catina.

Antioch (Theopolis), captured first by the Persians in A.D. 611,<sup>2</sup> and then by the Arabs in 636,<sup>3</sup> issued no coins under Heraclius, though once so prolific a mint. The only exception is formed by the coins of year 7 (= A.D. 616/7) with the inscription SEYSY, apparently a blundered rendering of 'Theopolis'.

The old mints of Thessalonica, Nicomedia and Cyzicus continued in operation, and two other places now strike for the first and last time under Byzantine rule—Isaura Palaia, which issued coins of year 8 (= A.D. 617/8), and a Cypriote mint, doubtless Constantia, which struck in year 17 (= A.D. 626/7) or perhaps as early as year 15 (= A.D. 624/5).

Heraclius by his will left the administration of the Empire to his two sons Heraclius Constantine and Heraclonas, and to the Empress Martina. Heraclius Constantine died, after a few months' reign, on 24 May, 641. In September, Constantinus (III), called also Constans (II),<sup>4</sup> the young son of Heraclius Constantine and grandson of the great Heraclius, was chosen Emperor. He was crowned in October, and Heraclonas and his mother, Martina, were deposed.

HERACLIUS  
CONSTANTINE  
AND  
HERACLONAS.

<sup>1</sup> Butler, *op. cit.*, p. 450. Fustat Misr, not Alexandria, was now the capital of Egypt.

<sup>2</sup> Bury's Gibbon, v, 69 f.

<sup>3</sup> Bury, *Hist.*, ii, 267 n.; Bury's Gibbon, v, 437 n.

<sup>4</sup> His baptismal name was Heraclius, changed at his coronation to Constantinus. This last was evidently his official name, Constans being a popular appellation (Bury's Gibbon, v, 176 n.; Kaestner, *De Imperio Constantini III* (1907), p. 24). On the coins he is always 'Constantinus', but to avoid possible difficulties in the numbering of the many Emperors named Constantine, and in accordance with the usage of most modern historians (following Theophanes), the Emperor has here been spoken of as Constans II.

There are no coins that can, with any certainty, be assigned to this period between the death of Heraclius in Feb. 641 and the coronation of Constantinus III (Constans II) in October of the same year.

The coinage of Constans II is closely modelled on that of his grandfather, Heraclius, and in various series he associates himself with the

**CONSTANS II**  
(**CONSTANTINUS**  
**III**), Sept. 641  
—Sept. (?) 668.

figures of his son Constantine IV, Pogonatus (Augustus from A.D. 654), and his younger sons Heraclius and Tiberius. His coins were struck at five mints only—Constantinople, Sicily (Catina or Syracuse), Carthage, Rome and Ravenna—as compared with the twelve mints of Heraclius; in other words, Thessalonica, Nicomedia, Cyzicus, Antioch and Alexandria<sup>1</sup> have ceased to coin, as well as the short-lived mints of Isaura and Cyprus.

The gold coinage issued at the Capital is abundant and well struck and the number of dies employed is very remarkable. The bronze coinage, on the contrary, is very badly struck, and the types are usually impressed on earlier coins, which are sometimes the large coins of the sixth century cut up into two or three pieces. The chief denomination is the follis (marked **M**) which is now of small module: on most of these coins the inscription *ἀναθέωσις* occurs (see *infra*, p. 266 n.).

The Carthage mint continues to be of considerable importance, though after the Arab invasion of 647 the Imperial domination of Northern Africa began to be seriously threatened. Sicily, in place of the old sixth-century coins which Heraclius had made current by his countermarks, has now types of its own, but even these are generally restruck on earlier money.

Under the rule of Constans, a man of energetic and independent character, the territory of the Empire was not materially curtailed, though in the earlier part of his reign Cyprus was attacked, Rhodes plundered and Armenia lost. Alexandria was razed to the ground in A.D. 646.<sup>2</sup> In 658/9 Muaviah the Caliph made peace with the Emperor. In 663 hostilities were renewed and the Arabs made yearly invasions of Asia Minor.

<sup>1</sup> Some of the barbarous Alexandrian coins catalogued under Heraclius I may possibly have been struck in the early years of Constans II; see *supra*, p. xxvii.

<sup>2</sup> In A.D. 647 GREGORY the Patrician, Governor of Africa, revolted and assumed the purple. According to Ibn Abd-el-Hakam he struck coins with his own effigy (Kaestner, *De Imp. Constant.*, p. 34; Diehl, *L'Afr. byz.*, p. 557). Some small silver coins have been sometimes attributed to him (*Rev. belge*, 1856, p. 191, cp. p. 492; 1857, p. 22; Helbing Sale Cat., 13 May, 1907, lot 170 and plate. The *obv.* has a crowned Imperial bust.

O  
Rev., 4+R. The attribution does not seem to me certain, and the style of the obverse  
E

appears to be later than the time of the African Gregory. Two specimens in the British Museum are assigned to the series of Beneventum: one of these formed part of the large collection of *Italian* coins purchased by the Museum in 1847 from Baron Kolb.

Constans was unpopular in the Capital, and his famous *τύπος*, which forbade all discussion as to the nature of the will and the nature of the energy of Christ, though intended to make for peace, seemed to his subjects to treat with contemptuous indifference the burning theological issues of the day.<sup>1</sup> In 662 he left Constantinople never to return. On his way to Italy he visited Athens, and it is likely enough that he and his courtiers brought with them the numerous gold coins that in our own time have been discovered buried at the site of the Asklepieion.<sup>2</sup> After ravaging the territory of the Dukes of Beneventum, which he was unable to recover for the Empire, Constans took up his residence at Syracuse, where he lived till 668, when he was assassinated by his bathing-attendant. He had reigned twenty-seven years.

His son Constantine IV had, since 654, been associated with his father as Augustus, and it is from this year that Constantine reckons his regnal years when—as is only exceptionally the case—

**CONSTANTINE IV,  
POGONATUS,  
Sept. 668–Sept. 685.**

a date is inscribed on his coins. He is said to have acquired the nickname Pogonatus from the circumstance that when he left the Capital for Sicily to avenge his father's death his face was smooth, but when he returned he had grown a beard. On the coins we find both beardless and bearded types, but 'Pogonatus' is an epithet more suitable to the enormous beards of Heraclius and Constans II than to the short close beard of Constantine as shown on his coins (Pl. XXXVI).

During this reign the Bulgarians settled to the south of the Danube (their kingdom was established A.D. 679), and the Slavs more than once besieged Thessalonica, now no longer an Imperial mint. But the life-and-death struggle was with the Caliph Muaviah and the Saracens. A great siege of Constantinople, extending over the years 672–677, was successfully resisted, and the army and fleet of the infidel suffered disastrous defeat. In 678 peace was made with the Caliphate on honourable terms, and Constantine, who played something of the heroic part of Heraclius and Leo the 'Isaurian', received the congratulations of the western world. It is probably not without significance that on the obverses of his coins this Emperor is represented—almost throughout—as an armed warrior. The design is borrowed from the earliest type of the solidi of the great Justinian (itself modelled on a type found in preceding reigns), and the characteristic feature is that the Emperor holds a spear and a shield (adorned with the device of a horseman attacking a prostrate enemy). On the second type of the solidi of Justinian I (and afterwards on the solidi of his successors) the Emperor holds the globus cruciger instead of the spear, but Constantine IV only exceptionally lays aside his spear for the globus.

<sup>1</sup> Bury, *Hist.*, ii, 304.

<sup>2</sup> Svoronos, in *Journ. internat. d'arch. num.*, 1904, p. 143 f.

Constantine's bronze coins struck at the Capital are of about the same large module as those of Justinian I, though it may be suspected, perhaps, that old coins of Justinian have been restruck with the types of the later Emperor. His Sicilian coins are like those of his father Constans. His Carthage coinage, though showing (on the thick solidi) traces of barbarism, continues to be important: in spite of the Arab invasion of Africa in 669, and of the foundation of Kairouan, south of Carthage, the Imperialists still held their ground, and at the end of the seventh century, Carthage and Hadrumetum and many citadels of the interior were still in their hands.<sup>1</sup>

In the acts of his reign and on many of his coins, Constantine IV is associated with his younger brothers Heraclius and Tiberius, but he deposed them from their Imperial position, *circa* 680. The extraordinary demand made by the army of the Anatolic district that Constantine should associate his two brothers in his rule because—being believers in the doctrine of the Trinity—they wished to be governed by a trinity of Emperors, may perhaps throw light on the feeling that inspired the frequent representation on Imperial coinage of groups of *three* (e.g. Heraclius and family and later Emperors).

Constantine died in 685, leaving his throne to his eldest son Justinian II, who was then sixteen, and who had been associated with his father (though not apparently on the coins) since 680.

Justinian II was successful in a war with the Bulgarians, but in 692 he quarrelled with the Caliph Abdalmalik, and the Imperial arms suffered defeat in Cilicia and Cappadocia at the hands of the Saracens.

Justinian employed as his ministers two men, Stephanus and Theodotus, whose rapacity and extortionate dealing—not alien to a certain strain of cruelty in his own character—made him immensely unpopular. In 695 he was overthrown by the general Leontius and banished with his nose slit,<sup>2</sup> or at any rate branded, to Cherson.

**JUSTINIAN II**  
(first reign),  
Sept. 685–695.

**LEONTIUS,**  
695–698.

Leontius reigned three years, and like most of the ephemeral monarchs who ascended the Imperial throne, probably issued coins, though none are known to be extant.<sup>3</sup>

With regard to the coinage of Justinian II during the period 685–695 it may be noticed that he introduced some interesting types, notably the head of the Saviour (in two forms), which now appears for the first time on the Imperial coinage (Pl. XXXVIII. 15–17).<sup>4</sup> In one of his coin-legends

<sup>1</sup> Diehl, *L'Afr. byz.*, p. 580.

<sup>2</sup> Hence his nickname Rhinotmetos.

<sup>3</sup> A leaden seal reading *Deus aiuta Leontii Aug. Romion* is attributed to Leontius by Mordtmann in *B. Z.*, 1906, p. 614.

<sup>4</sup> There is, previously, an isolated case of the representation of the figure of Christ

the Emperor describes himself as *Servus Christi*; on other coins the word PAX is conspicuous. His mints are Constantinople, Carthage and Syracuse.

There are no coins (at any rate in the British Museum) belonging to the Ravenna mint, though bronze money may well have been struck there, as was certainly the case in one or two later reigns.

But the issue of the great bulk of the gold coinage of Ravenna (distinguishable by its bracteate-like fabric) seems to have ceased with the reign of Heraclius or Constans II.

**Coinages of Central and Southern Italy in the 7th, 8th and 9th centuries.**

Under Justinian II the coinage of Italian mints differs greatly in style and fabric from that previously issued by the Lombards (in the north of Italy) and by the Imperialist authority at Ravenna.<sup>1</sup> This Italian coinage continues throughout the eighth century and during the ninth till the time of Theophilus and Michael III, i.e. *circ.* A.D. 842. It consists of solidi and tremisses which, as a rule, reproduce the types of the Imperial coinage of Constantinople, reign by reign. But it may be distinguished from the Constantinopolitan money by the following criteria:—1. The coins are rudely engraved in high relief, and type and legend are very rough to the touch, almost, one might say, as if designed to be fingered by a blind man. They nearly always show some trace of barbarism, especially in the frequent blunders of the inscriptions. 2. The gold is often much alloyed either with silver or with baser metals: some of the coins have the appearance of electrum, others of silver, more or less debased. 3. Various letters and a star are often found in the field of the reverses.

These coins have been much neglected by numismatists, though de Salis, in arranging the British Museum collection, has rendered a useful service in bringing a number of them together under the heading of 'the Italian class'. I have arranged many others in the same way, but the great difficulty is to determine at what mints, and by whom, these pieces were struck. Their general provenance seems to be Italy, Central and Southern, and many bear a remarkable resemblance to the gold coins of the Lombard Duchy of Beneventum.<sup>2</sup> This ducal coinage of Beneventum

on a rare solidus of Marcian, struck *circ.* A.D. 450. On the *rev.*, the Saviour, wearing the nimbus cruciger, stands blessing the bride and bridegroom, Pulcheria and Marcian; see G. Macdonald, *Coin Types*, p. 234; Pl. IX. 8, solidus in Hunter Museum; cp. Dressel in *Zeit. f. Num.*, xxi, p. 247 f.

<sup>1</sup> Even before the time of Justinian II there are gold coins, inscribed with the names of Constans II and of Constantine IV, which are not of the 'bracteate' fabric but resemble the Italian coins with the name of Justinian II here referred to.

<sup>2</sup> On the Beneventum coinage see Keary, *Coinages of Western Europe*, p. 99; Blanchet, *Nouv. manuel de num.*, II, p. 212; Engel and Serrure, *Traité de num.*, i, pp. 35, 288. The coins of the Principality of Salerno may also be compared, but these do not

took its rise under Romoald II, *circ.* A.D. 698, and consists of imitations of the solidi of Justinian II, whose bust and legends (much blundered) are copied by Romoald and his successors. Grimoald III, the contemporary of Charlemagne, first places his own name on the Beneventine coins instead of the blundered name of Justinian II.<sup>1</sup>

The provenance of the Italian coins now under discussion, and their resemblance to the Beneventum coinage, seem to authorize us in describing them as a coinage of Central and Southern Italy. They can hardly have formed part of the Beneventine currency, though another Lombard Duchy, that of Spoleto,<sup>2</sup> in Central Italy, might be a possible claimant. On the whole, it seems best to regard these coins—or at least certain groups of them—as Imperial issues minted at Rome and in the South Italian possessions of the Empire in the toe and heel of the peninsula. The barbarous style and blundered lettering are difficulties in attributing many of the coins to Rome; on the other hand (as Prof. Oman has pointed out to me) the style of the earliest Papal coins (those of Adrian I, A.D. 772–795; *rev.* R M)<sup>3</sup> recalls the style of these Italian gold coins. Probably only a careful study of the provenance of these coins—such as could best be made by an Italian numismatist—will enable us to determine their classification. Meanwhile, I have catalogued all these pieces under the heading Central and Southern Italy, even though they are not demonstrably of Imperial mints; at the same time assigning specifically to Rome those specimens which by their style and from the presence of letters in the field seem to suggest this attribution.<sup>4</sup>

begin till the time of Siconolfus, A.D. 839–849: see Engel and Serrure, i, p. 291 and F. Gaetano, *Le Monete delle Zecche di Salerno*, Salerno, 1891.

<sup>1</sup> The coins before Grimoald III are assigned to different Dukes according to the letters and symbols found in the field of the coins.

<sup>2</sup> The earliest pieces hitherto assigned by numismatists to the Duchy of Spoleto are coins of Guido (d. 894): Gneccchi, *Bibliogr.*, p. 368. It may be also remarked that the earliest coins of the Duchy of Naples—another conceivable claimant—are assigned by A. Sambon to the time of Leo III the Isaurian, A.D. 717. They are followed, but probably not till *circ.* 821, by the money of the later Dukes: Engel and Serrure, *Traité*, i, p. 293 f. The coins now in question are certainly not of the Lombard Kingdom of North Italy, where coinage inscribed with the kings' names probably begins with Grimoald, A.D. 662, and is continued by his successors of the seventh and eighth centuries. This regal Lombardic coinage is of *thin*, bracteate-like fabric. On the coinage of Central and Southern Italy, especially in the tenth and eleventh centuries, see J. Gay, *L'Italie méridionale*, Paris, 1904, p. 587 f. During those centuries there are abundant references in extant documents to the Byzantine solidi (*solidi Romanati*; *soteriki*, i.e. with the type of the Saviour; *skyphati*) as forming a medium of exchange in Italy, side by side with the local silver coins such as the *tari* of Amalfi. These solidi must have been the ordinary solidi minted at Constantinople, for our Central and Southern Italian class of gold coins does not seem to have been minted subsequently to *circ.* A.D. 842.

<sup>3</sup> Engel and Serrure, *Traité*, i, p. 284.

<sup>4</sup> Some portions of this section are expanded from my article in *Corolla numismatica* (1906), p. 330 f.

In 698 Leontius, the supplanter of Justinian II, was dethroned and banished to a monastery by the admiral Apsimar, who, as Emperor, assumed the name of Tiberius (III). During his reign the Imperialists took the offensive against the Saracens, invaded Northern Syria, and were victorious in Cilicia. We have coins of Tiberius III struck at Constantinople, Syracuse, and (in bronze only) at Ravenna.

**TIBERIUS III,**  
**APSIMARUS,**  
**698-705.**

A few gold coins may be also, possibly, assigned to Carthage in 698, the year in which that city was finally taken by the Arabs.<sup>1</sup> After this capture, which was followed in a few years (A.D. 709) by the surrender of Septem (Ceuta), the Roman rule, and, with it, the Roman official coinage, ceased to exist in Africa. In spite of this, we find

**Coinage of Africa.**  
**'Provincial**  
**Coinage.'**

in the reign of Tiberius III, and in many subsequent reigns, till as late as the time of Basil I (died 886), a series of gold and bronze coins which bear Imperial types, and which by their provenance, style and blundered inscriptions seem to proclaim themselves as of African origin, or at least as modelled on coins of the old Carthaginian mint. The coins of this series are generally in high relief and often of alloyed gold (in these respects resembling the Italian coins discussed on p. xxxi), but they have other peculiarities; the heads, for instance, are very stiffly drawn, and the face presents the appearance of a mask. Count de Salis, who partially arranged the series of these coins in the British Museum, has labelled it 'African'. But it seems, on historical grounds, highly improbable that all these coins can have been minted in Africa and exclusively used there. I have therefore catalogued them (whether Imperial or non-Imperial) under the purposely vague title of the 'Provincial Coinage'. It is possible that this coinage may have been in use in Sardinia, while Sicily has, *a priori*, a still better claim, and there is some little evidence as to the Sicilian provenance of the coins.<sup>2</sup> Another alternative is that some of the coins may have supplemented the Arab issues in Africa, or have been struck by native tribes who had been previously accustomed to use the Imperial money issued at Carthage.<sup>3</sup>

Tiberius III was reigning only in fancied security. In 704 the dethroned Justinian managed to escape from Cherson, and in 705, with the aid of the Bulgarian army, made himself master of the Capital where, in the Hippodrome, he put to death the two usurpers,

**JUSTINIAN II**  
**(second reign),**  
**705-711.**

<sup>1</sup> On the chronology, Diehl, *L'Afr. byz.*, p. 582 f.

<sup>2</sup> e.g. various coins of this class, chiefly of the eighth and ninth centuries, which came to me at the British Museum for examination (in 1905) were found mixed with Byzantine and other coins that were undoubtedly of Sicily.

<sup>3</sup> The Arab coins in use were those of the Omayyad Caliphs (A.D. 661-750) and the Abbasid Caliphs (A.D. 750, &c.). Then, the coinage of the Aghlabids in Tunis, &c. A.D. 800-909. (Also the Idrisids of Morocco, A.D. 788-985.)

Leontius and Tiberius III, Apsimar—'treading', as it was said in scriptural language, 'upon the Lion and the Asp.'

Justinian caused his young son Tiberius to be crowned Augustus, and associated him with himself on all the coins struck after his restoration. These coins were struck only at the Constantinople mint. There are no coins of Syracuse or Ravenna. In 705 Syracuse had been attacked by the Arabs and great spoils taken from it: from this time the issue of Sicilian coinage appears to have ceased, unless the 'Provincial' coinage just referred to (p. xxxiii) is to be regarded as Sicilian. The Ravenna mint ceased to coin in the reign of Leo III (A.D. 717-741).

Justinian II was put to death in 711 by the Armenian Bardanes, called Philippicus, who had induced the army to revolt and seize Constantinople. The little Tiberius, a child of about six years, was torn from the altar to which he clung for safety and brutally killed. Such was the pathetic end of the last representative of the great House of Heraclius, once the bulwark of the Empire against its Persian and Arab foes.

Philippicus, as Emperor, proved himself a mere man of pleasure, who paid no attention to public affairs. He was dethroned in June, 713, as the result of a conspiracy, and his eyes were put out.

**PHILIPPICUS,**  
**BARDANES,**  
**Dec. 711-June 713.**  
On the obverse of his coins Philippicus is represented as holding in addition to the usual globus an eagle-headed sceptre (Pl. XLI. 11). It is tempting to connect the appearance of this sceptre with the story<sup>1</sup> that Philippicus had been banished by Tiberius III because of a dream in which Philippicus was seen with his head overshadowed by an eagle—an omen betokening future sovereignty. But on these coins Philippicus seems to be represented as *Consul*, this eagle-headed sceptre being a characteristic of the representations of Heraclius, Phocas, and their predecessors in their consular capacity: it is found also on the well-known consular diptychs.

The coins of this reign are chiefly of Constantinople, but the solidus (Pl. XLI. 14) described, *infra*, ii, p. 359, No. 9, is undoubtedly Italian, and was apparently struck at the Roman mint. It must have been issued in the usual course immediately after the accession of the Emperor, for we know that as soon as it was ascertained at Rome that Philippicus was a heretic and a monothelite, there was a violent popular outbreak. The people refused to recognize his acts of sovereignty, and declined to use the solidi bearing his effigy:—*hisdem temporibus cum statuisset populus Romanus nequaquam haeretici Imperatoris nomen, aut chartas, vel figuram solidi suscipere.*<sup>2</sup> A new Duke of Rome sent by the Exarch

<sup>1</sup> Bury, *Hist.*, ii, p. 357.

<sup>2</sup> *Lib. Pontif.*, 174; Diehl, *L'Exarchat de Ravenne*, p. 362; Gregorovius, *Rome*, ii, pp. 208-212, Eng. trans.; Wroth in *Corolla Numismatica* (1906), p. 331.

on behalf of Philippicus was resisted by the former Duke, Christopher, and expelled from the city.

Anastasius II, the successor of Philippicus, was overthrown in 716, after a short reign, by the soldiers of the Theme Opsikion. As an orthodox Emperor he was welcomed by the people of Rome who had just rejected his predecessor, and his coins were struck at Rome as well as at Constantinople. On the coins, his private name 'Artemius' appears in conjunction with his assumed Imperial name 'Anastasius'.

**ANASTASIUS II,**  
June 713–Jan. 716.

The place of Anastasius was taken by Theodosius III, an obscure commissioner of taxes, of Adramytium in Mysia, who under the stress of a great Saracen onslaught upon the Empire soon abdicated in favour of the distinguished general Leo, who was proclaimed on 25 March, 717.

**THEODOSIUS III,**  
Jan. 716  
–25 March 717.

Leo III, generally known in history as the Isaurian, though, as a native of Germanicia in Commagene, he was really a Syrian, was, like Heraclius and Constantine IV, one of the heroic defenders of the Empire and Christendom against the Moslem. From the great siege of Constantinople, which took place in the first year of Leo's reign, A.D. 717–718, the Saracens retired discomfited—with the great army of the Caliph decimated and his armada shattered. 'The date 718 (says Bury) is really oecumenical', and Leo is more important in history than Charles Martel.<sup>1</sup> Under Leo and his House the Empire now begins to acquire that new vigour which, in the ninth and tenth centuries, was to animate its still more expansive life under the dynasty of Basil the Macedonian.

**LEO III**  
the 'Isaurian',  
25 March, 717  
–18 June, 741.

Leo was a great reformer. He reorganized the army, developed the system of the Themes,<sup>2</sup> and devoted attention to finance. By the issue of his *Ecloga* (a legal handbook written in Greek) and of military, agricultural, and maritime codes<sup>3</sup> he rendered notable service to his subjects, to whom Roman law and the Latin language had ceased to be intelligible.<sup>4</sup>

The great iconoclastic movement—the centre of interest in this reign and in many succeeding reigns—was inaugurated by Leo III in 726 by

<sup>1</sup> Leo's decisive battle over the Saracens at Akroenos in 739 is also noteworthy: see W. M. Ramsay in *Studies in hist. and art of the Eastern Provinces* (1906), p. 288.

<sup>2</sup> On this subject, see, besides the well-known essay of Gelzer, Lombard, *Constantin V*, p. 82 f.; Diehl, in his *Études byz.*, pp. 276–292 ('Un trait caractérise essentiellement le régime des thèmes; c'est la réunion entre les mains d'un même gouverneur des pouvoirs civils et militaires,' p. 277).

<sup>3</sup> Leo's connexion with the two last-named codes is not, however, ascertained with certainty; cp. Lombard, *op. cit.*, p. 84 f.

<sup>4</sup> The coins, however, continue to bear Latin legends.

his decree commanding the total abolition of images, but it concerns us here only in one of its minor manifestations—its influence on the Imperial coin-types. Ever since the time of Tiberius II Constantine, the reverse type of the coins, whenever it was not a mere mark of value (M, K, &c.), had consisted of a representation of the Cross. Towards the close of the seventh century Justinian II made an innovation by introducing two interesting heads of the Saviour, with a cross shown behind the head. Justinian's successor (Tiberius III) once more displayed the cross on his coins, but there can be little doubt that but for the reforming zeal now directed against both iconolatry and mariolatry, the experiment of Justinian II would have been repeated and improved on, and that those figures of the Saviour, of the Virgin, and the Saints, which are common on the later Byzantine coinage would have appeared much earlier and probably in greater variety.

On his coins Leo retained the cross, with the symbolism of which he had no quarrel, for we know that when the great image of Christ was removed from the Palace gateway—to the outrage of a popular feeling which (according to the point of view adopted) we may account either devout or superstitious—he caused a simple cross to be set up in its stead. Under his successor (Constantine V) the coinage becomes more secularized,<sup>1</sup> and the ingenious device is adopted of placing the head of an Imperial personage on *each* side of the coin, instead of merely placing both the heads on the obverse and a religious device on the reverse. Constantine V is known to have set up in Constantinople many statues, in gold and silver, of himself, some of which, if Nicephorus<sup>2</sup> is to be trusted, occupied the site of images of the Saviour.

In 720 Leo III had crowned his infant son Constantine V (born 718). De Salis and others have denied the existence of any coins belonging to this joint rule, but certain pieces representing Constantine beardless and Leo bearded seem to have a good claim to fill the lacuna.<sup>3</sup> The gold coinage of the Emperor Leo is fairly abundant, but his bronze, and still more the silver<sup>4</sup> money is now extremely rare and can never have been very plentiful. At Ravenna, only bronze pieces were struck, probably at the beginning of the reign; but the coins that can be assigned to Rome and to the Central and South Italian class are fairly numerous. In what I am obliged to call vaguely the 'Provincial' class, there are solidi obviously modelled on the earlier products of the Carthage mint.

<sup>1</sup> The Emperor, however, holds a cross, and the cross is the reverse type of the silver coins.

<sup>2</sup> Cp. Lombard, *op. cit.*, p. 101.

<sup>3</sup> Cp. vol. ii, p. 366, No. 8, *infra*.

<sup>4</sup> Finlay (*Hist.*, i, p. 450; cp. ii, p. 32) would attribute silver coins usually given to Leo V, to Leo III in conjunction with Constantine V, but he has not examined the numismatic difficulties in his proposed arrangement.

Leo died in 741 and was succeeded by his son Constantine V, a good soldier and a vigorous and intelligent statesman, who has too long suffered in the eyes of posterity from being known mainly through the distorting medium of biographers who were his theological opponents.<sup>1</sup> Like his father, he joined eagerly in the iconoclastic movement, with which (in the later part of his reign) he coupled a crusade of his own against monasticism—undertaken probably quite as much on political and social as on religious grounds. He was successful in defending his frontiers, and beat back the Slav, the Saracen, and the Bulgarian. In Italy he fared less well, and the year 751 is memorable for the taking of Ravenna by the Lombards under Aistulf and the overthrow of the Exarchate, which then passed by the donation of the Frank King Pepin to the Pope. In 773 Charlemagne destroyed the kingdom of the Lombards and sided with the Pope, Hadrian I, who was the first successor of St. Peter to strike a coinage independently of the Emperor.

CONSTANTINE V,  
COPRONYMUS,  
18 June, 741?  
—14 Sept. 775

Constantine maintained the finances of the Empire in a flourishing condition,<sup>2</sup> though we hear much of his brilliant court and costly largesses, and of public works, such as the restoration of the aqueduct of Valens. On both sides of his coins he continues the practice that long subsisted of representing the heads and figures of various members of the Imperial family. His coins retain the head of his father, Leo III, and in A. D. 751 he introduces the head and name of the newly-crowned 'Leo the younger', i. e. Leo IV, his son by Irene, daughter of the Chagan of the Khazars.

At Constantinople, in addition to the gold and silver money, there is a fairly plentiful issue of bronze, most of which is dated in the thirtieth year of his reign = 749/50 A. D. The custom of dating the bronze coinage had fallen into desuetude, and it is doubtful if it was revived in later reigns.<sup>3</sup> The coinage of the 'Provincial' class is also abundant, and the bronze coins with the title ΔΕΣΠ[ΟΤΗΣ] are well struck.<sup>4</sup> The coinage of RAVENNA had long since dwindled down to the issue of a few bronze pieces, and had apparently come to an end even before the Lombard conquest of A. D. 751. The Imperial coinage struck at ROME, on the other hand, is somewhat important, in spite of the inauguration (already referred to) of a purely Papal currency and of the break between Pope and Emperor, which practically dates from *circ.* 756. What we have called the Central and South Italian class ceases to be of importance after the death of Constantine V, though Naples and Calabria and Sicily still adhered to the Empire.

<sup>1</sup> See A. Lombard, *Constantin V*, Paris, 1902; especially chap. ii, 'La légende de Constantin V.'

<sup>2</sup> Lombard, *op. cit.*, p. 101.

<sup>3</sup> See *infra*, § 6, under 'Dates.'

<sup>4</sup> On the use of *δεσπότης*, see p. xl n., *infra*.

The earlier part of the reign of Constantine V was disturbed by the rising of Artavasdes, the son-in-law of Leo III, who seized the capital and assumed the Imperial crown, which he also shared with his son Nicephorus. Both father and son were captured ere long and blinded by Constantine, but the coins figured in Pl. XLV exist as rare memorials of their reign. Fig. 16 is a neatly-engraved solidus of Constantinople, but Figs. 18 and 19 are of the Roman mint, and are closely modelled on the Roman solidi of the previous reign (Leo III jointly with Constantine V). The strange conjunction, in the case of Fig. 18, of Artavasdes with his rival Constantine V is perhaps due to nothing more than the error of an engraver, who more or less mechanically copied the reverse of a solidus of Leo III and Constantine V.<sup>1</sup>

Leo IV (nicknamed the Khazar), who had ruled jointly with his father Constantine V since A.D. 751, became sole ruler on Constantine's death in 775. His health was weak, and special measures were taken to secure the succession<sup>2</sup> to Constantine VI, his son by Irene, the beautiful Athenian. On 24 April, 776, this son, a child of about six, was crowned at Constantinople, the governors of the themes and all classes of the citizens having already sworn allegiance to him. Constantine VI is associated with his father on all the coins issued by Leo IV, and appears on the solidi, e.g. Pl. XLV. 21, as his throne-fellow. The figures are of nearly equal size and height, but the chubby face of the child-Emperor is quaintly contrasted with the father's conventional oval visage and 'beard of formal cut'.

The gold and bronze money of this reign further displays the heads of Leo III and Constantine V, identified by the coin-legends as the 'grandfather' and 'father' of Leo IV.

On the death of Leo IV, 8 Sept. 780, the boy Constantine VI and his mother Irene began their joint reign. The whole soul of Irene was possessed by ambition, but it was the ambition (as Finlay drily remarks) of reigning alone, not of reigning well. It was not, indeed, till 790, when Constantine was about twenty, that he tried to break loose from his mother's control. Irene was then deposed by the soldiers, and her favourites were dismissed, though in Jan. 792 she was again restored by Constantine to her old position.

<sup>1</sup> It may be noted that there are some Papal documents dated by the years of Artavasdes.

<sup>2</sup> Bury, *Hist.*, ii, p. 478.

The rule of Constantine and his mother lasted till 797 when, on Aug. 15, Irene caused her son to be deposed and blinded. She then ruled—the sole occupant of the throne and the last representative of the 'Isaurian' dynasty—for about five years, until in 802 (31 Oct.) she was herself deposed by Nicephorus, her treasurer, and finally died in banishment in Lesbos.

On the coins of the joint reign, the heads of the two rulers are always associated. In the case of the gold coins of her sole reign the Empress adopts the unusual practice of placing her own bust on the reverse as well as on the obverse (Pl. XLVI. 10). She appears in a robe embroidered, like the consular dress of the Emperors, with a lozenge pattern and holds a cruciform sceptre and the globus; but the portrait is highly conventional, and does not materially differ from the portrait of her son. The bronze coins of Irene and, no doubt, some of her gold pieces were probably employed for the *ὑπατεία* or consular donative which Irene liberally distributed to the people on the Easter Monday (1 April) of 799, the day on which she went in procession from the Church of the Apostles to the palace.<sup>1</sup> This procession, we are told, was carried out with unusual pomp. 'The Roman world (says Gibbon) bowed to the government of a female; and, as she moved through the streets of Constantinople, the reins of four milk-white steeds were held by as many patricians, who marched on foot before the golden chariot of their queen.'

In style and types the coinage of Constantine and Irene follows the stereotyped model of the earlier 'Isaurian' rulers, i.e. it displays only Imperial busts and figures.<sup>2</sup> Yet a new departure in coin-decoration might well have been expected from Irene, for she reversed the policy of her iconoclastic predecessors, and at the Seventh Oecumenical Council, held (at Nicaea) in 787, the figure of the holy cross and holy images (especially figures of Christ, the Virgin, angels and holy men) were declared to be lawful in stone or any other material, inasmuch as they stimulated those who beheld them to think of the originals.

The annals of the two reigns include disastrous campaigns against the Bulgarians, and the payment to the Arabs of a great tribute of gold pieces to purchase peace for Asia Minor.<sup>3</sup> But the most remarkable event of Irene's reign took place on the Christmas Day of 800, when the Pope (Leo III) crowned Charles the Great, King of the Franks, as Roman Emperor. The allegiance of successive Popes to the Imperial throne had

<sup>1</sup> *Ῥίψασα ὑπατείας ἐν τῇ μέσῃ πολλήν*, Cedr., vol. ii, p. 28, ed. Bonn. Coins were liberally distributed on the occasion of a coronation—three gold solidi, three silver coins and three 'obols' in purses (*ἐπικόμβια*), or there were distributions of *νομισματα* (*solidi*): cp. Codin., *De off.*, cap. 17, p. 88, Bonn; ib., p. 98; cp. Comm. in Codin., pp. 355, 356, *ὑπατεία* of semisses, tremisses and newly-struck solidi.

<sup>2</sup> Except the silver coinage, of which the cross potent long remained the usual type.

<sup>3</sup> Haroun-er-Rashid was Caliph in A.D. 786.

long been weakening. Now came the absolute and final breach, and we have henceforth to deal mainly with an eastern, as distinct from a western, Roman Empire.

It is probably significant that there are, apparently, no Imperial coins struck at the mint of Rome under Constantine V,<sup>1</sup> the scourge of monks and image-worshippers, nor are any found under Constantine VI and Irene, though (in 785) these rulers were gratefully hailed by the Pope as a new Constantine the Great and a new Helena.

Nicephorus, Irene's successor, reigned alone till Dec. 803, when he crowned his son Stauracius. On the solidi of his sole reign he had

**NICEPHORUS I,**

**STAUACIUS**

(his son),

Dec. 803

-2 Oct. 811.

restored the cross potent as the reverse type, but the solidi of the joint reign display an Imperial head on each side, after the model of his iconoclastic predecessors. On these latter coins Nicephorus has the title of βασιλεύς, his son being described as δεσπότης.<sup>2</sup>

The ex-treasurer turned his attention chiefly to finance. He imposed new taxes and tributes but practised a well-judged economy as a set-off to the extravagance of his predecessor. In this reign Haroun-er-Rashid again overran Asia Minor, and was again bought off by an indemnity. But the most interesting political event is the treaty of Nicephorus (A.D. 803) with Charlemagne, defining the limits of the eastern and western Empires. The authority of Charlemagne over Rome, the Exarchate of Ravenna, and the Pentapolis was acknowledged by Nicephorus, while at the same time the western Emperor admitted the supremacy of his eastern 'brother' over the maritime parts of Dalmatia and the south of Italy.

The cessation of the (eastern) Imperial coinage at Rome has already been noticed, but we still find under Nicephorus and in a few subsequent reigns solidi of Italian origin bearing Imperial types. These pieces have a quasi-barbarous appearance, and are of base gold, or electrum, but they presumably represent a currency issued for the use of Byzantine subjects in the south of Italy.<sup>3</sup> Nicephorus was killed during a campaign in Bulgaria on 26 July, 811; Stauracius then reigned till October 2, when he was deposed by Michael I, Rhangabe, the husband of his sister Procopia.

<sup>1</sup> At least of his *sole* reign.

<sup>2</sup> Δεσπότης had already first appeared on the 'Provincial' bronze of Leo III, where it is applied to Leo himself and to his son Constantine V. Again, on the corresponding coins of Constantine V, it is applied to the deceased Emperor Leo III and to the reigning Emperor Constantine V. On the coins of Nicephorus I, δεσπότης has more the sense of 'Prince', 'heir-apparent', and is applied to the Emperor's son, while βασιλεύς is reserved for the father.

<sup>3</sup> Cp. p. xxxii, *supra*.

A few months after his accession Michael crowned his son Theophylactus, who appears with him on the coins. But Michael's incompetent conduct of the Bulgarian war led to the deposition of both father and son, after about two years' rule (813). Michael, although, like Irene, a supporter of the image-worshippers, made no change in the types of the coinage: the head of Christ which Sabatier and others have described as appearing on his solidi clearly belongs to the coinage of Michael III.<sup>1</sup>

Leo V, the Armenian, the competent officer who had been chosen by the army to replace the weak Michael I, drove back the Bulgarians when they appeared before Constantinople, and after the death of Krum (815), their formidable ruler, concluded a thirty years' peace with King Omortag.

Leo restored the discipline of the army, purified the civil administration, and enforced a stricter dispensation of justice. But the trimming policy of the 'Chameleon' (as he was called) on the image-controversy pleased nobody, and at last the Council of 815 re-established the Acts of the Council (754) of Constantine V ordering the removal of images and pictures.

Leo's coins are of the usual character, and on nearly all he is associated with his son Constantine. He met his death in his own chapel on Christmas Day, 820, at the hands of conspirators who proclaimed the distinguished general Michael of Amorium his successor, and banished Constantine to a monastery.

Early in his reign Michael II crowned his son Theophilus, and all the known coins appear to have been issued in their joint names.<sup>2</sup> Michael died a natural death in Oct. 829, but his reign had been marked by many disasters.<sup>3</sup> Crete was lost to the Arabs in 826, and held by them till an Eastern Emperor (Nicephorus Phocas) long after (961) recovered it; Sicily, often attacked in the eighth century, was now again invaded by the Arabs (827), who began gradually to settle there, with Palermo as their chief military centre, though the conquest was not completed till 878, in the reign of Basil I.

<sup>3</sup> Thomas the Slavonian, in the course of his remarkable rebellion, 822-Oct. 824, was crowned at Antioch, but there is no evidence that he struck coins.

Theophilus was an iconoclast of a rather violent type, but some sympathy may be felt with his passion for building, and his taste for the acquisition of gems and embroidery, and all the productions of goldsmith and silversmith. The famous golden tree with its (mechanically) roaring lions and its melodious birds was an elaborate toy in which he delighted. More important was his reconstruction and improvement of the sea-walls of the capital, and his pride in this useful undertaking is proclaimed with unexampled frequency by inscriptions on the walls.<sup>1</sup> Theophilus was unfortunate in his wars with the Saracens, and lost Amorium, his family city, to the Caliph Motassem. In this reign the coinage that we have attributed to the South Italian possessions of the Eastern Empire apparently comes to an end. The 'Provincial' coinage ceases in the next reign but one, i.e. under Basil I.

Some space ought here to be devoted to discussing the family history of Theophilus in connexion with the coins. The wife of Theophilus was THEODORA, 'the Paphlagonian', and legend, wearing only, it is to be feared, the mask of history, declares that he chose her (as Paris chose the loveliest goddess) by presenting her—one among many fair competitors—with a golden apple. The marriage (however brought about) probably took place in A.D. 821,<sup>2</sup> during the lifetime of his father Michael II. There were several children of this union whose names occur on coins in conjunction with Theophilus, and these coins may be classified as follows:—

1. With the head of Theophilus alone.
2. Heads of Theophilus and Theodora and their three daughters (all otherwise known), Thecla, Anna and Anastasia (Pl. XLVIII. 14).<sup>3</sup>
3. Theophilus in conjunction with a 'Michael' (always *bearded*) and a 'Constantine' (always *beardless*).
4. Theophilus and Constantine (the latter, *beardless*).
5. Theophilus and a *beardless* 'Michael.'

Of these series, No. 2 (Pl. XLVIII. 14) is, in many ways, the most interesting and important. This coin can hardly have been struck during the lifetime of Michael II (with whom Theophilus was then associated as 'prince'), because Michael II (Emperor) finds no place upon it. The *earliest* possible date of its issue must therefore be Oct. 829, when Theophilus became Emperor after his father's death. From the fact that only the *female* household of Theophilus is represented thereon, it may be

<sup>1</sup> Van Millingen, *Byz. Const.* (Walls), pp. 182, 183.

<sup>2</sup> Brooks in *B. Z.*, x (1901), p. 540 f.

<sup>3</sup> Mary, another female relation of Theophilus is sometimes supposed (Brooks in *B. Z.*, x, p. 544) to have been his eldest daughter; by others (E. K. in *B. Z.*, xi (1902), p. 256) to have been his sister. She does not figure on the coins. There is also a Pulcheria named as the daughter of Theophilus. She is likewise absent from the coins.

fairly assumed— as Schlumberger has suggested<sup>1</sup>—that at the time when the coin was struck Theophilus and his wife had not been favoured with male offspring. Yet Theophilus had sons. The young Constantine on Nos. 3 and 4 in our list, though often said to be ‘unknown to history’ is evidently the ‘Constantine, son of Theophilus,’ of whom there is a bare mention in the *De Cerimoniis*.<sup>2</sup>

The bearded Michael on No. 3 has been sometimes assumed to be a son (otherwise unknown) of Theophilus. As he is represented *bearded*, his birth would have to be placed soon after the marriage of Theophilus (A.D. 821). But from our argument about the ‘family’ coin (No. 2), it results that Theophilus had no male children till after *circ.* 829. This bearded Michael, therefore, was probably not the son of Theophilus, nor do we know that he was his brother. I fall back, then, on the simple hypothesis that he is Michael II, the deceased father of Theophilus, who is placed on the coin (as was the practice under the Isaurian dynasty) in commemoration, and perhaps also to range symmetrically with previous types. It is, indeed, noticeable that this bearded Michael only appears as one of the family group of three, and not *alone* with Theophilus, as does the young Constantine (No. 4).

The *beardless* Michael (No. 5) is clearly the well-known son of Theophilus who became Michael III, and earned the unenviable nickname of ‘the Drunkard’. He was born late in his father’s reign (A.D. 839), and was only three when Theophilus died.

The course of events I suppose to have been as follows. At the time of his accession in 829, Theophilus had no sons. For a time he reigned alone, but in a year or two (*circ.* 832?)<sup>3</sup> a son Constantine was born, and was associated in the Empire. This son died, or was displaced, probably in or before 839, when Michael (III) came into existence, Michael being crowned in 840 and associated with Theophilus on the coins.

In the coinage some innovations were made by Theophilus. He restored the cross (now the patriarchal cross) on some specimens, and on the *folles*, an inscription—in this case ΘΕΟΦΙΛΕ ΑΥΓΟΥΣΤΕ ΣΥ ΝΙΚΑΣ—takes the place of the familiar mark of value Μ.<sup>4</sup> He also introduces on coins the legend Κύριε βοήθει τῷ σῷ δούλῳ so familiar on Byzantine seals and other monuments.<sup>5</sup> On some of his coins Theophilus describes himself and his son Constantine as the δοῦλοι of Christ: Justinian II, on his solidi, had called himself *Servus Christi*.

<sup>1</sup> *Mélanges d'arch. byz.*, i, p. 141 f.

<sup>2</sup> Const. Porph., *De Cerim.*, ii, 42 = vol. i, p. 645, ed. Bonn:—ἕτερον λαρνάκιον πράσινον, ἐν ᾧ ἀπόκειται Κωνσταντῖνος ὁ υἱὸς Θεοφίλου. The difficulty naturally found by Mr. E. W. Brooks (who cites this passage, *u. s.*) as to Constantine being sometimes *bearded* is caused only by a mistake of Sabatier’s: Constantine is always *beardless* on the coins.

<sup>3</sup> Cp. Brooks, *loc. cit.*, p. 544.

<sup>4</sup> This mark of value is continued only on the ‘Provincial’ bronze.

<sup>5</sup> Schlumberger, *Sigillographie*, pp. 29–35, 42, 43, &c.

Theophilus died in Jan. 842, leaving his child Michael III to the care of his widow Theodora, who proved a prudent and economical regent.

**MICHAEL III,**  
'the Drunkard'

20 Jan. 842

-23 Sept. 867.

**THEODORA**

(widow of

Theophilus),

regent till 856.

At the opening of the reign solidi were issued with the head of Theodora (styled ΘΕΣΡVΗΑ) on one side, and on the other the little Emperor and his sister Thecla robed as 'Augusta' (Pl. XLIX. 14). On a solidus struck when the Emperor was a few years older, the busts only of Michael and Theodora appear, and the reverse presents the head of the Saviour (Pl. XLIX. 16). The reappearance of this last-named type is clearly due to the action of Theodora, who

restored the worship of images, and brought the great controversy to an end by the overthrow of the iconoclasts. The divine image had been first introduced by Justinian II, A.D. 685-695, but was not destined to reappear on the coins till the reign of Michael III. There can be little doubt that it is reproduced from one of the old coins of Justinian II (Pl. XXXVIII. 16), though the encircling legend is somewhat altered. The sacred head is not nimbate, but the cross is seen behind it.<sup>1</sup>

In 856 Theodora retired from the regency, and her daughter Thecla and the two daughters Anastasia and Anna, who once figured on a coin of Theophilus (Pl. XLVIII. 14), were at this time, or earlier, banished to a monastery.

Michael himself had grown up dissolute and sottish; he plunged eagerly into the contests of the Hippodrome, and lived on familiar terms with the charioteers: with his boon companions he mimicked the sacred rites of the church and the solemn religious processions.

A noteworthy incident in this reign is the appearance in the Bosphorus of a new enemy, the Russians, who attacked Constantinople (A.D. 860), though they were finally driven off. It has already been stated that the 'Provincial' coinage comes to an end in the ninth century (reign of Basil I), but a mint for several centuries dormant, that of Cherson in the Crimea, now displays some activity. Its coins are all of bronze, and are of very rude workmanship and design. This important commercial centre had been, from the time of Justinian II till the reign of Theophilus, governed by a president, *πρωτεύων* or *πρωτοπολίτης*, and a council of senators. Theophilus had in A.D. 833 sent thither a *strategos*, and an Imperial officer of this name thenceforward ruled there, with the *πρωτεύων* and senate in subordination.<sup>2</sup>

<sup>1</sup> A similar head of Christ appears on a ring of Basil, the great chamberlain (*παρακοιμώμενος*), who is in all probability identical with Basil (I), afterwards the colleague of Michael III: Schlumberger, *Mélanges d'arch. byz.*, i, p. 39 f. Cf. Cabrol, *Dict.*, s. v. Anneaux, p. 207.

<sup>2</sup> Schlumberger, *Sigil.*, p. 235; Bury, *Hist.*, ii, p. 357; Koehne, *Mus. Kotschoubey*, i, p. 200 f.

The end of the worthless Michael came on 23 Sept. 867 when, 'in the hour of intoxication and sleep,' he was murdered at the instigation of his familiar companion, the grand chamberlain Basil (I), whom he had associated with himself in the Empire since May, 866.

Basil, the groom and horse-tamer, who had risen to be a high court official and co-emperor, was the founder of the great Macedonian dynasty which was destined to rule the Eastern Empire for nearly two centuries. Though not himself a great soldier or a man of culture, he was of acute and vigorous intelligence; he recognized the immense opportunities of his position, and possessed the usefully kingling art of choosing his agents wisely. He was a great builder and restorer of churches. He improved the navy; revived in his handbook (the *πρόχειρος νόμος*), and in the *Basilica*, planned by himself and completed by Leo VI and Constantine VII, the neglected laws and law-books of Justinian, and—a hardly less useful service—strove to regulate the public expenditure and to lessen the grievous burden of taxation.

BASIL I,  
the Macedonian,  
24 Sept. 867  
–29 Aug. 886.

By the fall of Syracuse in 878 Sicily was finally won by the Arabs, but a compensation to the Empire may be said to have been found in the Imperial successes in southern Italy. In 875 Bari had surrendered and became the military centre of the eastern Empire in the west. The Arabs were driven out of Calabria, and the new theme of Longobardia was formed. These successes had, however, no influence on the coinage, and the 'Provincial' issues<sup>1</sup> cease to be struck after this reign, having dwindled down to little more than a currency of bronze. But the appearance is now to be noted at Naples of local coins bearing the name of the Emperor Basil.<sup>2</sup> The rude bronze of Cherson remained the solitary example of a currency issued beyond the walls of the Capital.

The Constantinopolitan money of Basil I is fairly abundant and neatly executed. Attention was evidently paid to the regular issue of the bronze currency, though cases of restriking occur. On the reverse of the solidus, which Basil must have struck about the time of his coronation, he introduces for the first time the figure of the Saviour enthroned ('Iesus Christus, rex regnantium'), whose head had already appeared on the money of Michael III.<sup>3</sup> His sons Constantine, Leo VI, and Alexander, all appear on the coins in association with their father, and there is an interesting solidus (Pl. L. 13) of Basil with Constantine (his son by his first wife Maria) and Eudocia, Basil's second wife. Such family groups were represented in mosaic on the walls of the palace

<sup>1</sup> The provenance of some specimens suggests that they may have circulated in Sicily and Italy.

<sup>2</sup> Engel and Serrure, *Traité*, i, p. 295; *Rev. Num.*, xiv, p. 245.

<sup>3</sup> The head of Christ is also found on the exceptional four-solidus piece of Basil I (Pl. L. 10).

of Basil, and are found in the Paris MS. of the Homilies of Gregory of Nazianzus.<sup>1</sup>

Basil died on 29 Aug. 886, from an injury received while engaged in his favourite pastime of hunting. He was succeeded by Leo VI, the

LEO VI,  
the Wise,  
29 Aug. 886  
-11 May, 912.

Wise, who passed as his son, though generally supposed to be the son of Michael III by Eudocia Ingerina, who had been the mistress of Michael before she became the wife of Basil I. Leo's long reign and that of his son Constantine VII, Porphyrogenitus (died 959), carry us onward far into the tenth century. Leo and Constantine were not men of strong character or great rulers, but most scholars feel a kindness for these literary Emperors—punctilious and pedantic though they were—to whom we owe the *Tactica*,<sup>2</sup> the *De Cerimoniis*, and the *De administrando Imperio*.<sup>2</sup> The writers themselves, like other encyclopaedic compilers of their age had, no doubt, something more than a literary aim, namely, the desire of rendering the wisdom and experience of the past practically useful to their contemporaries—of producing in fact some *κοινωφελὲς ἔργον*.<sup>4</sup>

The administration of Leo was lax and incapable, and this Emperor, as Finlay has remarked, typified a bad feature of Conservatism—its 'idle spirit'. In some respects he much resembles 'the British Solomon', James I. If the army, as one may judge from the *Tactica*, was well organized and well officered, the military history of the reign is a record of disaster. Bari, in South Italy, was lost, at least temporarily, to the Langobards of Beneventum; Thessalonica, the second city of the Empire, was captured by the Saracens (904), and the invasion of Bulgaria, then ruled by a powerful king, Symeon, was unsuccessful. The Islamite pirates of the Aegean still continued a scourge of the Empire. Yet the Empire, as a whole, was not materially affected, and in the east the Empire of the Caliphs was breaking up, just as the Empire of Charles the Great had broken up in the west. The Bulgarians were being converted to Christianity and were settling down. One characteristic feature of the period of the Macedonian dynasty is the growth, in the provinces, of powerful families and their mutual strife, which tended to the weakening of the throne.

Basil I had died, leaving his sceptre to his sons Leo VI and Alexander, who had already been crowned in his reign. Little brotherly love subsisted

<sup>1</sup> Bayet, *L'Art byz.*, p. 156 (ed. 3).

<sup>2</sup> The *Tactica* is doubtless of the reign of Leo VI, if not actually from his own pen. See Mitard in *B. Z.*, xii (1903), p. 585; Bury's Gibbon, vi, p. 515 f., citing Oman's *Art of War*. Some writers (cp. Krumbacher, *Byz. Lit.*, pp. 636, 721) had assigned the work to Leo III, the Isaurian. Cp. Neumann, *Weltstellung* (French trans., p. 51 n.).

<sup>3</sup> On this treatise, Bury in *B. Z.*, 1906, p. 517 f.

<sup>4</sup> C. Neumann, *Weltstellung*, &c., French trans., p. 23.

between them,<sup>1</sup> and Alexander, a mere lover of pleasure without kingly tastes or habitudes, naturally fell into the background. The names of the two brothers are found at times conjoined in lapidary inscriptions as late as A. D. 904, but it has been thought<sup>2</sup> that after some years Leo practically reigned alone. It does not seem likely, however, that Alexander was ever formally displaced, for he was assigned by Leo as the guardian of his young son Constantine VII, and he himself for a time struck coins as sole ruler (Pl. LII. 1).

Turning to the coinage of Leo's period, we find Leo and Alexander associated only on the bronze money, but we have coins of Leo alone struck in gold, silver, and bronze. Sp. Lambros has supposed that the coins with the name of Leo alone were struck subsequent to A. D. 904, but an examination of the whole series (see *infra*, p. 448 f.) suggests, though not very strongly, that Leo's 'sole' coins belong to the beginning and middle rather than to the end of his reign. As the predominant partner Leo may have thought it sufficient, as a general rule, to place his sole name on the coinage, and the absence of the name of Alexander need not perhaps necessarily imply that he was not, at least nominally, co-emperor at the time.

Leo's coins follow the model of his predecessor Basil I, but he introduces (Pl. LI. 8) a new and important type—the Virgin MARIA. This type is a bust of the Virgin *orans*, and it is interesting to compare with it the ivory in the Berlin Museum, whereon the Blessed Virgin is represented as crowning the Emperor Leo.<sup>3</sup>

In 911 Leo crowned Constantine VII, his son by his fourth wife Zoe, and the young Emperor is portrayed on the solidi then struck—a tall, slim figure, almost equal in height to his father, though he was but six years old (Pl. LI. 9). This is an instructive instance of the conventionality of the coin-types when representing the younger members of the Imperial family.

Leo VI died on 11 May, 912, and was succeeded by his brother Alexander, the guardian of the young Constantine VII. It seems likely that Alexander, during his year's reign, struck coins in all three metals, but the only extant pieces are some rare solidi of Constantinople and rare bronze of the Cherson mint. On these coins the existence of Constantine VII is ignored, and on the solidus Alexander puts himself under the protection of a saint, no doubt his namesake, St. Alexander, who is represented placing the Imperial crown on his head (Pl. LII. 1). This

**ALEXANDER,**

type of a saint, or, more often, the Saviour or the Virgin, bestowing the crown upon Imperial personages becomes sufficiently common on coins and other monuments in later times, and on the solidus of Romanus I, struck *circa* A. D. 927, we find Romanus crowned by the Saviour (Pl. LIII. 2), as Alexander was by St. Alexander.

We pass on to the long reign of Constantine  
**CONSTANTINE VII, VII, Porphyrogenitus.** For the first six years  
**PORPHYROGENITUS,** after the death of his guardian Alexander, Con-  
**6 June, 913** stantine was under the tutelage of his mother  
**-15 (?) Nov. 959.** Zoe and other regents, and the coins are issued  
in the name of mother and son.

During the next period, from A. D. 919 to 944, Constantine still remains in the background, and new co-emperors come forward to share his honours. The ruling spirit is Romanus I, Lecapenus (father of Constantine's wife Helena), who was crowned Emperor at the end of 919. Prof. Bury has remarked<sup>1</sup> that Romanus has been unjustly represented as a man of weak character. In foreign politics and war he was successful, and by his important law of 935 he attempted to stop the growth of enormous estates in Asia Minor, and their pernicious absorption of the small agricultural farmers.

In 921 Christopher (died 931), the son of Romanus I, was crowned co-emperor, and in 924 the two younger sons of Romanus, namely Stephen and Constantine, were likewise raised to Imperial rank. We possess coins of all these rulers: on some pieces, Constantine VII takes a secondary position; on others, he does not appear.

Romanus I was deposed by his sons Stephen and Constantine, 16 Dec. 944, but they were themselves shortly afterwards (27 Jan. 945) banished to the island-monastery to which they had consigned their father. 'Old Romanus (to quote Gibbon's version of his authority) met them on the beach with a sarcastic smile, and after a just reproach of their folly and ingratitude, presented his Imperial colleagues with an equal share of his water and vegetable diet.'

Constantine VII was at last independent. For about two months he reigned alone, and at this time doubtless issued the solidus and the numerous bronze coins which show his head bearded (Pl. LIII. 7). It is interesting to observe that nearly all these last-named pieces are struck on the bronze money of Romanus I, which had probably been hastily called in and put out of circulation. In April 945 Constantine crowned his son Romanus II, and placed his head on the coins.

Constantine was among the kings who reign but do not rule; yet his mild manners and the absence of great disasters under his government

<sup>1</sup> Bury's Gibbon, v, p. 209; cp. p. 215 n.

endeared him to his subjects. As a man of cultivation, as author, painter, architect, connoisseur and patron of the arts, he stands conspicuous among Byzantine emperors.<sup>1</sup> He died in Nov. 959, and was succeeded by Romanus II, the son for whose behoof he had written the *De administrando Imperio*, very much as Lord Chesterfield wrote his Letters to his son. Romanus, like Philip Stanhope, proved a disappointing pupil. He grew up indeed handsome and fascinating, but, as Emperor, had only the interests of a man of pleasure. It is strange that we seem to have no coins of his reign<sup>2</sup> beyond the trivial currency of Cherson. He died at the age of twenty-four, leaving his wife, the beautiful but unscrupulous Theophano, regent for his young sons Basil II and Constantine VIII.<sup>3</sup>

**ROMANUS II,**  
15 (?) Nov. 959  
-15 March, 963.

**THEOPHANO**  
(widow of  
Romanus II),  
regent, 16 March  
-15 Aug. 963.

This regency lasted a few months only, till 16 Aug. 963, when Nicephorus II, Phocas, the most distinguished soldier of his time, became Emperor, and in the following month married Theophano, of whom he was deeply enamoured. The young Emperors, Basil and Constantine, though necessarily kept in the background, were not ousted from their position. On the coins, Nicephorus appears alone, except in the case of the solidus, Pl. LIV. 4, whereon he is represented with Basil II; and this piece we may conjecture to have been struck immediately after his accession, in order to show that he was the guardian, not the supplanter, of the young Emperors. On the solidi with his sole name the bust of Nicephorus is associated with the effigy of the Virgin.

**NICEPHORUS II,**  
**PHOCAS,**  
16 Aug. 963  
-10 Dec. 969.

Under Nicephorus II and his great successors, John Zimiscees and Basil II, the Empire reached the zenith of its military glory. Already under Romanus II Nicephorus had recovered (A.D. 961) for the Empire the island of Crete, which had been so long the stronghold of the Saracen Corsairs. In 962 he had been victorious over the Saracens in Cilicia, and taken Aleppo from its Emir Sayf-al-dawla, the redoubtable Hamdanid dynast. Further successful campaigns in Cilicia and northern Syria followed later, leading up to the capture in 969 of the great city of Antioch, which was henceforth to remain, almost continuously, in the hands of the Imperialists for more than a century. In 965 the fleet under Niketas had recovered Cyprus from the Saracens.

The great military services of Nicephorus had made him popular at the time of his accession, but his religious policy alienated ecclesiastic

<sup>1</sup> Rambaud, *L'Empire grec au dixième siècle—Constantin Porphyrogénète*; Bayet, *L'art byz.*, p. 117 f.; A. van Millingen, *Byz. Const.* (The Walls), p. 112.

<sup>2</sup> See *infra*, p. 468.

<sup>3</sup> If the bronze coin that has been described (cp. *infra*, p. 470) as bearing the name of Theophano is correctly read, it probably belongs to the period of her regency.

and monk,<sup>1</sup> and the imposition of taxation, necessitated by a succession of important campaigns, aroused the discontent of the laity. Cedrenus<sup>2</sup> and Zonaras<sup>3</sup> tell us that he tampered with the coinage, and issued two kinds of νομίσματα (solidi); one, of the usual weight and fineness, in which payment of taxes had to be discharged; another, of diminished weight, which had to be accepted in payments made by the Treasury. The latter coin is stated to have been called τεταρτηρόν or τεταρτερόν. This was probably not its official denomination, but its popular nickname—as if we were to speak of a debased English *sovereign* as a *crown* (i. e. five-shilling piece). It is further stated that the Emperor refused acceptance, except at a discount, of the solidi of his predecessors.

Now with respect to the debasement of the coinage, it is important to observe that the extant νομίσματα of Nicephorus are of the usual weight and, so far as is known, of the ordinary fineness. There is thus no evidence to support the statement that the Emperor issued base money. Suspicions to the effect that the solidus was only a quarter of what it purported to be may have been rife among the subjects of Nicephorus at a period when he was unpopular and when—during a time of famine—he, or his brother Leo Phocas, was suspected of buying up corn to sell it at an enhanced price, and the historians may have confounded suspicion with fact.<sup>4</sup> The whole story of debasement and of the issue of more than one kind of νόμισμα has probably been antedated, for it would be true of some of the successors of Nicephorus.<sup>5</sup>

The end of the great soldier, and stern, ascetic ruler was tragic. On a December night of the year 969, as he slept alone on a tiger's skin spread in a corner of his palace, he was attacked by a band of assassins and murdered. The chief conspirator was another distinguished general, John Zimisce, the Armenian, and the Empress Theophano, who had become his lover, was privy to the act.

Zimisce was at once proclaimed Emperor by his friends, but as the price of his consecration in St. Sophia's he had to promise the Patriarch to repeal the ecclesiastical legislation of his predecessor, and to banish the guilty Theophano. This remarkable soldier, who is described as short of stature but of great bodily strength and beauty, carried on the work of Nicephorus in the East, and his campaigns of 974 and 975 justified his own boast that 'all Phoenicia, Palestine, and

<sup>4</sup> Cp. Paparrigopoulos, *Hist. du peuple grec*, iv, 151-153, cited by Schlumberger, *Un Emp. byz.*, p. 539.

<sup>5</sup> Of his namesake Nicephorus III, Botaniates, for instance. Cp. also the statement of Zonaras (xviii, 22) about Alexius I, cited *infra*, p. lxii.

Syria were delivered from the tyranny of the Unbelievers and had become obedient to the Romans'. But his great service to the Empire was his complete overthrowing of the Russians who, under Sviatoslav, had invaded Bulgaria, and were threatening Constantinople itself. As a further result of this Bulgarian war (A. D. 970-972), Bulgaria—or, rather, the *Eastern* kingdom of Bulgaria—was annexed to the Empire, and the Imperial frontier was once more extended to the Danube. The marriage (in 972) of Theophano the younger<sup>1</sup> (daughter of Romanus II and Theophano) to Otto (II), son of the Emperor Otto I, brought the Eastern Empire, in this reign, into intimate relations with the Western.

John had been proclaimed as guardian of the two young co-emperors, Basil II and Constantine VIII (sons of Romanus II), but their names do not appear upon the coinage, though their existence is implied in the inscription (= τοῖς βασιλεῦσι) on the silver coin, No. 7, p. 476, *infra*. John's gold and silver coins are not now very common, though he gained popularity by his charitable distributions, and by the unusual lavishness of his largesses. He abolished the *kapnikon*, a hearth-tax that had been instituted by the unpopular Nicephorus I.<sup>2</sup>

In the choice of types, John, who was known for his piety and for his approval of monasticism, seems to have been influenced by his devotion to the Blessed Virgin. He engraves on his solidi the bust of Mary, who places the crown on his head, while the *Manus Dei* is stretched over him in blessing. The remarkable silver coin, Pl. LIV. 14,<sup>3</sup> which there is good reason for attributing to this Emperor, may have been struck in 972, when he celebrated at Constantinople his triumph after the victories in Bulgaria, and displayed the *ikon* of the Theotokos that had been captured during the war.

There are no bronze coins bearing John's name or effigy,<sup>4</sup> and this is true also of his successors until Constantine X Ducas (A. D. 1059) once more issued bronze money with the Imperial name. We have, however, the formal testimony of Scylitzes that John first issued (in A. D. 972) bronze coins with the head of the Saviour

**Anonymous bronze  
coinage of John I  
and his successors.**

and a religious inscription in Latin, and that a similar practice was followed by his successors:—προσέταξε δὲ καὶ ἐν τῷ νομίσματι καὶ ἐν τῷ ὀβολῷ εἰκόνα ἐγγράφεισθαι τοῦ Σωτῆρος, μὴ πρότερον τούτου γενομένου· ἐγράφοντο δὲ καὶ γράμματα ῥωμαϊστὶ ἐν θατέρῳ μέρει ὧδέ πη

<sup>1</sup> Represented on an ivory plaque, see *infra*, p. lix n.

<sup>2</sup> Schlumberger, *L'Épop. byz.*, i, p. 183.

<sup>3</sup> The British Museum specimen has unfortunately suffered injuries which distort the face of the Virgin and the head of the Infant Christ.

<sup>4</sup> The bronze of Cherson, however, bears the monogram of John I and (later) of Basil II.

διξιόντα· Ἰησοῦς Χριστὸς Βασιλεὺς Βασιλέων. Τοῦτο δὲ καὶ οἱ καθεξῆς ἐτήρησαν βασιλεῖς.<sup>1</sup>

There are extant a large number of bronze coins bearing a sacred type and legend as described by Scylitzes (or with similar types and legends), which must undoubtedly be assigned to John and his successors. An attribution of these types to various Emperors has been attempted in this Catalogue,<sup>2</sup> and is discussed in detail *infra*, p. 480 f. A clue to the arrangement is afforded by the restrikings, and by noting the varying ornamentation of the nimbus of the Saviour.

John died suddenly on 10 Jan. 976, on his return from the East, and Basil II and Constantine VIII (the sons of Romanus II) were now left as joint Emperors. Their busts appear side

**BASIL II and  
CONSTANTINE VIII,  
976-1025.**

by side on the gold and silver coins, but Constantine was the faint Imperial shadow of his brother Basil—the ascetic warrior, abrupt of speech, who was feared rather than loved, and indifferent to all the refining influences of art and literature.<sup>3</sup> The person of Basil is known to us from a description in Psellus and from the miniature representing him as a soldier in the Venice Psalter.<sup>4</sup> His portrait on the coins seems conventional, or of little value as a likeness.

In the earlier years of his reign—for we may speak of it as *his*—Basil was absorbed by the serious rebellions of Bardas Phocas and Bardas Skleros. But in 991 he entered on the task of his life, the subjugation of the Bulgarian nationality in both its eastern and western kingdoms. The great struggle continued under Czar Samuel and his successors, and did not close till 1018, when Basil—'Bulgaroktonos'—celebrated his triumph at Constantinople. By the subjugation of the Slavs and—a more doubtful policy—the annexation of Armenia, the Empire acquired a greater extent of territory than it had possessed since the days of Justinian I, but its greatness culminated with Basil II.

In the Constantinopolitan coinage the only feature of interest is the adoption, probably towards the end of the reign, of a new fabric for the *nomisma* (Pl. LVI. 4). This fabric is thin and spread, and tends

<sup>1</sup> Cedren., vol. ii, p. 413, ed. Bonn; Finlay (*Hist.*, i, p. 451) remarks on the first part of this passage that its plain meaning is that 'John I made a change in the type of the gold *nomisma* and of the copper *obolos* which had previously been distinguished by the portrait of the Emperor'. The facts are that on all the extant gold and silver of John his name and head appear, though with the addition of the Virgin. On the bronze, the Imperial name and head are, for the first time, omitted, and a religious type and inscription take their place.

<sup>2</sup> On the lines proposed in my article in *Corolla Num.*, p. 333 f.

<sup>3</sup> Schlumberger, *L'Épop. byz.*, Parts I and II.

<sup>4</sup> Reproduced in colours in Schlumberger, *Un Emp. byz.*, p. 304. On the coin-portrait, see *infra*, § 4, Period V. Basil II (with Constantine VIII) appears also in the miniature of the Bari MS. figured in Schlumberger, *L'Épop. byz.*, iii, 801.

to become concave on the obverse,<sup>1</sup> forming the *nummi scyphati* so often mentioned in documents of a later age. The concavity appears more distinctly in the following reign; and for a considerable period the fabric of the old *nomisma* or *solidus*, thick and of small module, subsists beside the thin and concave fabric of the new *nomisma*.<sup>2</sup>

**NUMMI  
SCYPHATI.**

In this reign the coinage of Cherson comes to an end, and the date of its cessation is doubtless the year 989, when the old Greek city—‘dernier débris du grand naufrage du monde hellénique’—the intermediary between the trade of Constantinople and Southern Russia, was taken by Vladimir, son of Sviatoslav.<sup>3</sup> Cherson was, indeed, restored to the Empire when Vladimir married the sister (Anne) of the two Basileis and embraced Christianity, but there is no indication that its coinage was continued after the Russian capture of the city.

**Coinage of  
Cherson ends.**

Constantine VIII, left to rule alone by the death of Basil II in Dec. 1025, was an idler<sup>4</sup> who committed the chief offices of government to his eunuchs. In his expenditure he was lavish, and the gold coins of his three-years’ reign are of three different types. He died 11 Nov. 1028, the last male representative of the great Macedonian House. Just before his death he had compelled Romanus Argyrus, a Byzantine noble, to marry his second daughter Zoe,<sup>5</sup> and Romanus duly succeeded to the throne.

**CONSTANTINE VIII  
(alone),  
15 Dec. 1025  
–11 Nov. 1028**

The coinage of Romanus III is not abundant. There are apparently no silver coins, and the *nomisma* is known only of a single type. This type departs from the model of his predecessor, and the obverse shows the Emperor crowned by the Theotokos (Pl. LVII. 13). The Virgin Mother seems to have been specially invoked as his patron—as she had been by an earlier ruler, John I, Zimiscees. In her honour he built at Constantinople the church and convent of St. Mary Peribleptos, and the ikon of the Mother of God which served as the standard of the Emperors was embraced by him with tears and kisses in a moment of peril in his unfortunate campaign in Syria (A. D. 1030).<sup>6</sup>

<sup>1</sup> The side bearing the Emperor’s name and figure may be conveniently described as the obverse.

<sup>2</sup> The *nomisma* of concave fabric is of *heavier* weight than the flat *nomisma*; see further, *infra*, p. lxii.

<sup>3</sup> On the date, Schlumberger, *L’Épop. byz.*, i, p. 758.

<sup>4</sup> On his character, Schlumberger, *L’Épop. byz.*, i, 334, 335; iii, p. 2 f.

<sup>5</sup> On Zoe, Schlumberger, *op. cit.*, iii; Diehl, *Études byz.*, p. 70, and his *Figures byzantines*, chap. x.

<sup>6</sup> Psellus, *Hist.*, 334 (p. 31, ed. Sathas, 1899).

Romanus died in 1034, and was succeeded by Michael IV, an able and handsome court-officer, for whom Zoe had, while still the wife of

**MICHAEL IV,**  
**THE PAPHLAGONIAN,**  
**12 April, 1034**  
**-10 Dec. 1041.**

Romanus III, conceived a passion, and whom she now married without a moment's delay. In this reign, the increase of the taxes and their arbitrary collection led to a revolt of the Bulgarians and Servians, and the independence of Servia began now (1040) to be tacitly recognized. An attempt to reconquer Sicily from the Saracens was undertaken by the brave George Maniakes with Normans and Varangians in his army, but was not successful, though Messina was stormed (1038). Michael died 10 Dec. 1041.

Zoe caused to be crowned as Emperor, Michael V (the nephew of Michael IV), her 'son' by adoption. On 18 April, 1042, the adopted son

**MICHAEL V,**  
**KALAPHATES,**  
**14 Dec. 1041**  
**-21 April, 1042.**

sent Zoe into exile, but as the result of a popular outbreak Michael was deposed and Zoe restored to the throne. The only coin that has any claim to belong to Michael V is that figured in Pl. LVIII. 5, a nomisma showing the Emperor crowned by the Virgin. The Emperor's head may be compared with the portrait of him that appears in the MS. of Zonaras at Modena,<sup>1</sup> representing his face as long and oval with a somewhat long beard and moustache.

For a few months Zoe shared the government with her younger sister Theodora, and though no coins have been identified as of their joint rule,

**ZOE AND**  
**THEODORA,**  
**21 April-11 June,**  
**1042.**

it is not improbable that such pieces were issued. Psellus describes the two Empresses seated side by side on the throne, and states that they made immense largesses to the multitude.<sup>2</sup> Theodora (according to Psellus) was calm and restrained. Zoe passed rapidly from the transports of joy to the depths of gloom. Zoe was extravagant and lavish, while Theodora husbanded her resources.<sup>3</sup> Their portraits appear in the Modena MS. of Zonaras,<sup>4</sup> and they were represented, conventionally, on the crown of 'Constantine Monomachus' now in the National Museum of Pesth.<sup>5</sup>

On 11 June, 1042, Zoe, who was now sixty-two, took to herself a third husband, the handsome Constantine Monomachus, who was

<sup>1</sup> Schlumberger, *L'Épop. byz.*, iii, p. 532.

<sup>2</sup> Cp. Schlumberger, *op. cit.*, iii, 388, 389. Type 1 of the nomisma of Theodora's sole reign, *infra*, p. 505, might be assigned to her joint reign, were there in existence a corresponding nomisma with the portrait of Zoe. Or, the two Empresses may have been represented side by side.

<sup>3</sup> Cp. Schlumberger, *op. cit.*, pp. 391, 392.

<sup>4</sup> Schlumberger, *op. cit.*, p. 541.

<sup>5</sup> C. de Linas, *Hist. du trav. à l'Exp. univ. de 1867*, p. 121 f. (in colours); N. Kondakoff, *Hist. . . . des émaux byz.*, p. 228 (243 f. in German ed.); Molinier, *L'orfèvrerie*, p. 52.

crowned Emperor the next day. Their court was frivolous, not to say scandalous, and the Emperor, who was little interested in military affairs, was prodigal in his expenditure, pleasure-loving and somewhat Bohemian in his tastes. Yet the reign of Constantine IX was fertile in important events, and even the Emperor has his serious side, as evidenced by

CONSTANTINE IX,  
MONOMACHUS,  
11 June, 1042  
-11 Jan. 1055.

his encouragement of literary men—among them, the ‘humanist’ Michael Psellus—and by his re-institution of the University of Constantinople. Philosophy and Law were once more to be studied, and the Law (declared the Emperor) was no longer to remain as obscure as an oracle. It was to be hedged round by science, and the professional lawyers were to be recruited only from the students of the University.

It was in this reign that the great schism of the churches of east and west took place (1054), and it was under Constantine that the permanent settlements of the Normans in Apulia (*circ.* 1042) and their capture of Otranto (1055) practically crushed the Byzantine power in Southern Italy; while the attacks of the Seljūk Turks began to weaken the structure of the Empire in Asia.<sup>1</sup> Yet, at the time, the future gravity of these attacks could hardly have been foreseen: the prestige of the Eastern Empire was, indeed, still considerable, and Armenia was completely under its control.<sup>2</sup>

The nomismata that may be assigned to Constantine IX are of no less than five types, and it is important to notice that, until the reign of Alexius I, we have to do with nomismata of two distinct fabrics<sup>3</sup>: (i) the thick small coins resembling the earlier solidi (Pl. LVIII. 6–8); (ii) coins of the thin, spread *concave* fabric that had been introduced by Basil II and Constantine VIII (Pl. LVIII. 9–12). The usual weight of (i) is about 62 grains; the weight of (ii) is about 68 grains. The old (flat) nomisma was thus reduced in weight, but the new (scyphate) nomisma retains the original weight (about 68 grains) of the old solidus or nomisma. Both classes seem to belong to the Constantinopolitan mint—though very likely to different officinae—and they probably represent the same denomination. Of course, if Class I (62 grains) passed current as a nomisma, the government was a gainer by its issue. It may be conjectured that one class was more especially used as the currency of widely extended commerce, while the other class chiefly circulated in the capital. A study,

<sup>1</sup> Finlay, *Hist.*, ii, pp. 433, 434.—Cp. Diehl, Introduction to French trans. of Neumann's *Weltstellung des byz. Reiches*, p. 5:—‘La bureaucratie civile, jalouse des barons et de l'armée, devint toute puissante au palais, et elle crut, en tenant les généraux en suspicion et en désorganisant l'armée, avoir évité à tout jamais la révolution. Le règne de Constantin IX . . . marqua le plein triomphe de ce système.’

<sup>2</sup> Neumann's *Weltstellung*, &c., pp. 66, 67 (French trans.).

<sup>3</sup> The two nomismata had been first introduced under Basil II and Constantine VIII.

if it could be made, of the usual provenance of each of these classes of nomismata would probably throw light on the cause of their contemporaneous issue. The silver coins bear interesting types of the Virgin (Pl. LIX. 3, 4, 5) who, on one denomination, is expressly identified as the Virgin of Blachernae, Η ΒΛΑΧΕΡΝΙΤΙΚΑ. Another silver coin supplies an instance, very rare on coins, of a metrical inscription:—*Δέσποινα σώζοις εὐσεβῇ Μονομάχον*. This is an iambic trimeter of the kind usually found on the metrical *Bullae*.<sup>1</sup> A coin of Romanus IV (*infra*, p. 525) is inscribed with a hexameter line.

It may be added that the Empress Zoe does not appear on the coins whether alone or in conjunction with her husband. Possibly the position of the beautiful Skleraina—herself created Augusta—may have caused a difficulty, though we know that wife and mistress lived together in the Imperial palace on strange terms of amity.

Constantine IX died on 11 Jan. 1055. Zoe had died in 1050, and her aged sister Theodora—she was now seventy—once more made her appearance upon the Imperial stage, and was proclaimed Empress, even before the dying sovereign had expired.

The Empress took an active part in the administration, but died after a short reign on 31 Aug. 1056, the last representative of the Macedonian House. Her gold coins show her adorned with a profusion of jewellery, and wearing elaborately embroidered robes (see Pl. LX. 1-3, and p. 506, *infra*, note 1). Her sister Zoe is said to have disdained both jewellery and brocaded dresses.<sup>2</sup> Theodora's coins are of neat and careful workmanship, particularly the standing figure of the Saviour (Pl. LX. 4-7), which has been supposed to be a reproduction of the image of the Saviour of Chalce (part of the Imperial palace), which stood above the gate.<sup>3</sup>

Theodora nominated as her successor Michael VI, Stratioticus, once an able soldier, but now old and incapable. The army soon rose against him, and proclaimed as Emperor Isaac Comnenus, a member of the great family of the Comneni who had acquired rich estates in Asia Minor. Michael abdicated on 31 Aug. 1057,<sup>4</sup> and the next day Isaac was crowned in St. Sophia.

<sup>1</sup> See Froehner in *Annuaire de la Soc. franç. de Num.*, 1882, p. 44; 1884, p. 312 f.

<sup>2</sup> Schlumberger, *L'Épop. byz.*, iii, p. 392.

<sup>3</sup> See Dumont in *Rev. Num.*, 1867, p. 195, where a silver coin, with *obv.*, the Virgin; *rev.*, standing figure of ΙC XC Ο ΧΑΛΚΗΤΗΣ, is published. Dumont thinks it may belong to the time of John III, Ducas, Vatatzes, Emperor of Nicaea. The coin was formerly in the Photiades coll. and is described in Photiades *Cat.*, No. 676.

<sup>4</sup> His portrait in the Modena MS. of Zonaras, figured in Schlumberger, *op. cit.*, iii, p. 533. (Portrait of Isaac I, *ib.*, p. 540.) The type of an angel—apparently the archangel Michael—on Michael's coins is novel (p. 509, type 2, *infra*).

Isaac's energy was directed to financial reform, and to curtailing the expenditure at court. But he was weakened by illness, and near the end of the year 1059 he followed the example of his predecessor and abdicated. Zonaras and Scylitzes record that Isaac caused himself to be represented on his gold coins with a drawn sword in his hand (see this type, Pl. LX. 12), and they take this representation to be an act of vainglory on the part of the Emperor, who thus seemed to ascribe his good fortune in securing his throne not to Providence but to his personal prowess. But Isaac does not seem to have been a man of the stamp of Hybrias the Cretan, and it is probable that these authors are merely echoing the sneers of persons who wished to ridicule the Emperor—disappointed courtiers, for instance, to whom Isaac's reforms were naturally not palatable.<sup>1</sup> For though the representation of an Emperor with a drawn sword was an innovation, it was not a startling one. Constantine IX (died 1055) had already been shown (on his silver coins) holding a sword in its sheath; and on two types of his nomisma Isaac I himself likewise holds his sword ensheathed.<sup>2</sup> To represent the sword *withdrawn* from its sheath was, therefore, only to develop slightly a motive already familiar.

On his only known silver coin Isaac used the epithet 'Orthodox', one not found on the coins of other reigns.

Constantine X, the Cappadocian noble who succeeded Isaac I, has been called by Finlay 'an avaricious pedant'. This may be a crude characterization, but it is certain that his policy was anti-military, and that his chief efforts were directed to replenishing the treasury at all hazards. The Senate, the bureaucratic classes, and the clergy who supported the Emperor against the military and land-owning classes, believed, or affected to believe that the age of wars was over. Part of the army was disbanded; pay was lowered, and the upkeep of stores and munition neglected. Yet at no time was a great Imperial army more needed. The gravest danger arose from the Seljûk Turks under Togril-bey and his successor Alp-Arslan. In 1064 the Seljûks had captured Ani, the ancient capital of Armenia, and their numberless raids and invasions laid Asia Minor waste. In 1065 a new

<sup>1</sup> Cedren., vol. ii, p. 641 ed. Bonn:—αὐτίκα τῷ βασιλικῷ νομίσματι σπαθηφόρος διαχαράττεται, μὴ τῷ Θεῷ τὸ πᾶν ἐπιγράφων ἀλλὰ τῇ ἰδίᾳ ἰσχύϊ καὶ τῇ περὶ πολέμου ἐμπειρίᾳ. The versified account of Ephraemius is to the same effect; p. 140 ed. Bonn.—Similarly also Zonaras, *Ep.*, xviii; vol. iii, pp. 665, 666 ed. Bonn (τῷ νομίσματι ξιφῆρη ἐαυτὸν ἐνεχάραξε). But Zonaras, in another passage (*Ep.*, xviii; vol. iii, p. 667 ed. Bonn) about Isaac, seems to take the drawn sword (τὸ ξίφος γυμνόν) as symbolizing the Emperor's drastic and over-hasty methods of making reforms.

<sup>2</sup> Cp. Maedler, *Theodora, Michael Strat., Isaac Komnenos*, p. 45 n.

enemy, the Uzes, broke into Bulgaria. In 1064 Belgrade had fallen into the hands of the Magyars.

The coinage of this unfortunate and ill-judging ruler is abundant. We may note especially, that in the course of his reign he abolished the 'anonymous' bronze coinage that had subsisted since the time of John I, Zimisceus (*supra*, p. li), and substituted one with the Imperial name and effigy. The time-honoured practice of using old *flans* for the bronze currency was not, however, discontinued.

Constantine X died in May, 1067, and for a few months his widow Eudocia carried on the government with two of her sons—Michael VII and Constantine. She struck a nomisma (Pl. LXI. 10) with her own figure (which had already appeared on one of the bronze coins of Constantine X) placed between her two sons.

In December (1067) Eudocia took a husband in the person of Romanus (IV), Diogenes, a Cappadocian noble famed for his valour. But he was as impetuous as brave, and rashly hurried an undisciplined army into the field. He made head against the Seljüks in Armenia, Cappadocia and Syria, but in the fateful battle of Manzikert, in Armenia, the Byzantine army suffered a crushing defeat at their hands (A.D. 1071). The same year is also memorable for the taking of Bari by the Normans under Robert Guiscard, and the ending of the long-lived domination of the Eastern Empire in Italy.

During the three or four years of his reign Romanus issued coins remarkably varied in type. On one of his nomismata he placed his own portrait (alone); on another the portrait of himself and Eudocia in conjunction. A third (Pl. LXI. 11) is a family-coin, showing, on the *reverse*, the three stepsons of the Emperor (the sons of Constantine X by Eudocia), and on the *obverse*, a figure of the Saviour crowning the Emperor and his wife. This subject—Christ crowning Romanus IV and Eudocia—is familiar to students of art from the ivory (the cover of an Evangelium) in the Bibliothèque Nationale, Paris. The ivory is of far higher artistic merit than the coin, as may be discerned from the mild and gracious aspect of the Saviour and the easy action of the arms in blessing, which are extended nearly horizontally and not raised as on the coin.<sup>1</sup>

<sup>1</sup> Molinier, *Hist. des arts appliqués, &c.*, vol. i, 'Ivoires,' p. 97; Babelon, *Guide illustré au Cabinet des Médailles*, Paris, 1900, fig. 145 and p. 318; Diehl, *Études byz.*, p. 119; Venturi, *Storia dell' arte ital.*, ii, p. 583. On the coin, the Christ stands on a rectangular footstool or platform which, on the ivory, is itself raised on a basis of omphalic form. On the ivory, the Emperor and Empress are nimbate as well as the Christ. The coin-types are reproduced on a leaden piece (presumably a seal) figured by De Marchant, *Mélanges de num.*, letter iv; Pl.; No. 2, and by Sabatier, *Iconographie*, Pl. suppl. 24, No. 1.—The motive of the Saviour blessing two Imperial persons is found, in the tenth century, on the ivory plaque of the Musée de Cluny,

On one of the silver coins (Pl. LXII. 2) occurs a beautiful figure of the Blessed Virgin holding (in her left arm) the Infant Jesus. This has been thought to be the Virgin called the Conductress—**Η ΟΔΗΓΗΤΡΙΑ**—who is familiar from other works of Byzantine art, such as the Spitzer ivory.<sup>1</sup> The legend of this piece forms a hexameter verse:—*Παρθένε σοι πολὺαῖνε δὲ ἤλπικε πάντα κατορθοῖ.*<sup>2</sup>

After Manzikert, Romanus IV became the prisoner of Alp-Arslan, and a revolution at Constantinople soon disposed of both Emperor and Empress.

Michael VII, Ducas (the eldest son of Eudocia and Constantine X), was now proclaimed Emperor. His reign was a period of disaster and revolt. The Emperor, a pupil of Michael Psellus, amused himself with rhetoric and verse-making, but was careless of affairs of State. The Seljūk hordes continued to pour into Asia Minor, and the Seljūks of Rūm or Iconium, under Suleiman, now became an independent power. At last, Nicephorus III, Botaniates, one of the pretenders to the throne, was proclaimed Emperor at Constantinople on 24 March, 1078, and Michael retired to the monastery of the Studium.

**MICHAEL VII,  
DUCAS,  
Aug. 1071  
—24 March, 1078.**

The reign of Nicephorus was short and troubled. His expenditure was wasteful, and we know from the testimony of extant coins that he debased the nomisma, which is often struck in alloyed gold or electrum. As to the personal appearance of the Emperor: what purports to be a portrait appears in the MS. of Chrysostom in the Bibliothèque Nationale, Paris,<sup>3</sup> but his portrait on the coins is evidently conventional, and is practically identical with the head of Michael VII as found on coins. Nicephorus, on his silver coins, placed beside his own the bust of his wife, the Empress Maria, the widow of Michael VII, who had represented her on some of his coins.

**NICEPHORUS III,  
BOTANIATES,  
25 March, 1078  
—1 April, 1081.**

Three rebellions of this reign (including that of Nicephorus Bryennius) were put down by the aid of the general Alexius Comnenus, nephew of the former Emperor Isaac I, Comnenus; but in the crushing of a fourth rebellion, that of his brother-in-law Nicephorus Melissenus, Alexius refused

representing Christ blessing the Emperor Otto II and his wife Theophano, the daughter of Romanus II and the famous Theophano: Schlumberger, *Un Emp. byz.*, p. 651.

to take part. This pretender was proclaimed Emperor at Nicaea, and struck a silver coin with his name as *δεσπότης* (*infra*, p. 539; Pl. LXIII. 11). But Alexius Comnenus, a much abler rival, was now himself a candidate for empire; on 1 April, 1081, he entered and plundered Constantinople, and Nicephorus III retired to a monastery. Melissenus was given the title of Caesar, but ceased to be of political importance.<sup>1</sup>

The accession of Alexius I, Comnenus, a representative of one of the great feudal families, put an end to a period of anarchy and weakness.<sup>2</sup>

ALEXIUS I,

COMNENUS,

2 April, 1081

-15 Aug. 1118.

During his long reign this able Emperor had to contend against Norman, Patzinak, Turk, and Crusader, yet his organizing skill and his subtle, if unscrupulous, diplomacy constantly stood him in stead. The decadence of the Empire was at least arrested by

Alexius, as it was afterwards by his successors John II and Manuel I.

His earlier years, 1081-1085, were occupied with the war in Illyria and Thessaly against the Normans, under the famous Robert Guiscard, Duke of Apulia, but the danger of the Norman invasion passed away with the death of Guiscard in 1085. A struggle with the Seljūk Turks, and with the Patzinaks, who were at last annihilated at the battle of the Leburnion in 1091,<sup>3</sup> filled the years 1084-1092. The First Crusade began in 1095. Europe (as Gibbon says) was 'precipitated on Asia', and Constantinople was almost swept away by the impetuous deluge. Alexius with great adroitness avoided a conflict with these hordes of western warriors: he regarded them as mercenaries in his pay, and tried to win their chiefs by costly presents.<sup>4</sup> Some of the Imperial possessions in Asia Minor were won back by the Crusaders, and the war with the Seljūks, 1110-1117, ended in favour of the Emperor.

One of the great tasks of Alexius was the creation of a navy and the strengthening and reorganization of the military forces, especially in the cavalry arm. Over his army Alexius exercised absolute control, and usually took the command in person. A vast increase in the public expenditure was the result of these military necessities; the subjects of Alexius groaned under the burden of taxation, and endured the numberless losses and vexations brought about by a systematic debasement of the currency.

Diehl, *Introd. to Neumann's Weltstellung* (French trans.), p. 6; cp. note, p. lv, n., *supra*, as to the state-policy under Constantine IX.

<sup>3</sup> They were finally extinguished under his successor, John II, A.D. 1123.

<sup>4</sup> Chalandon, *Essai sur le règne d'Alexis I*, chap. vi.

Alexius was about thirty-three at his accession, and is described as a man of short stature, with broad chest and shoulders. His bust and full-length figure often occur on the coins, but the portrait seems to be conventional. He is represented also on seals<sup>1</sup> and in a MS. of the Vatican.<sup>2</sup> In the earlier part of his reign he associated with himself Constantine Ducas, the son of Michael VII, Ducas; but Constantine does not appear on the coins, for the pieces assigned by Sabatier (ii, p. 194) to Alexius I and Constantine are doubtless of Alexius III and Saint Constantine. In 1092 Alexius associated his eldest son John (II) in the Empire, and it was no doubt on this occasion that he put forth a *nomisma* (Pl. LXV. 1) bearing figures of himself, his wife Irene,<sup>3</sup> and John. His famous daughter Anna Comnena does not appear on the coins, though her seals are extant.<sup>4</sup>

The coinage of Alexius I presents many varieties of types—the bust, or the full figure, holding the cross, the labarum or a jewelled sceptre. But there is no bold departure in the designs. The interest of his coinage lies in the metals and denominations.

(i) *Bronze coinage* (Pl. LXV. 9–16), consisting mainly of small pieces of irregular shape and thick fabric. Extant specimens weigh from about 50 to 70 grains. (This is probably the *folles*.)

(ii) A *silver coin* (Pl. LXV. 2–6), nearly identical in size and fabric with the bronze just described. The weight of the specimens in the British Museum is about 60 grains; no doubt the *miliaresion*. There are also flat, thin coins in silver; the British Museum specimen weighs 32 grains.

(iii) *Nomisma*. This is found in various metals:—

Type 1 in gold.

Type 2 in bronze.

Type 3 in gold and in electrum.

Types 4 and 5 in base silver or billon.

Type 6 in electrum.

Type 7 in gold and in billon.

<sup>1</sup> On the seals of Alexius, see Schlumberger, *Mélanges d'arch. byz.*, i, pp. 263, 264; *Sigillogr.*, p. 79; and p. 423 (*rev.*, seated Christ); p. 638; Sorlin-Dorigny in *Rev. arch.*, 1877, pt. i, p. 82; Birch, *Seals in British Museum*, v, p. 4; Konstantopoulos in *Journ. internat. d'arch. num.*, 1905, p. 214 f. (Alexius and family).

<sup>2</sup> See the reproductions of Cod. gr. Vat., No. 666, in Chalandon, *op. cit.*, frontispiece and p. 50.

<sup>3</sup> The standing figure of Irene occurs in enamel in the *pala d'oro* of St. Mark's, Venice: see Veludo in Pasini, *Il tesoro di San Marco*, Pl. XV–XX; Venturi, *op. cit.*, p. 645 f.

<sup>4</sup> See Schlumberger, *Mélanges d'arch. byz.*, i, p. 267; *Sigillogr.*, p. 641, and in *Rev. num.*, 1905, p. 339 f. Cp. *Comptes rendus de l'Acad. franç.*, 1905, p. 142 (ring of Irene? wife of Alexius I).

It is certain that Alexius was reduced to great straits for money. Early in the reign he had recourse to the precious vessels of the churches, and from the doors of one church he stripped the gold and silver plating; he also melted down various public monuments made of bronze.<sup>1</sup> And he was easily led on by the example of his predecessors to the adulteration of the nomisma.

The changing fortunes of the nomisma may here be briefly recapitulated. We have seen that as far back as the tenth century, Nicephorus II, Phocas, was accused, though apparently unjustly, of tampering with this coin. Under Constantine VIII (1025-1028) we find *two* gold coins, both presumably intended to pass as nomismata though one is inferior in weight to the other. These coins are (*α*) a scyphate piece (first introduced by Basil II) with the weight of 68-70 grains<sup>2</sup>; (*β*) a small thick coin of the weight of 62-63 grains. These two coins continue to be struck down to the reign of Michael VII, Ducas (1071-1078), but after his time the gold coin of 62-63 grains ceases to be issued.

Among the extant nomismata of Michael VII there are some specimens struck in pale gold or electrum, and even in silver and billon.<sup>3</sup> Already, therefore, the debasement of the gold nomisma was being attempted. The nomisma-coinage of the next Emperor, Nicephorus III (1078-1081), the predecessor of Alexius I, is particularly shameless, specimens in pure gold being of exceptional occurrence, while the majority of pieces are in electrum or base gold. The part that Alexius himself played can be made out fairly well from the following statement in Zonaras, which we can confront with the testimony of the coins themselves:—

Οὗτος ὁ βασιλεὺς καὶ τὸ νόμισμα κεκιβδηλευμένον παρὰ τῶν πρὸ αὐτοῦ εὐρηκῶς χάλκεον ἔθετο, ᾧ εἰς τὰ τῆς βασιλείας ἐκέχρητο ἀναλώματα, τοὺς δέ γε φόρους διὰ χρυσίων δοκίμων εἰσέπραττε, πῇ δέ γε καὶ δι' ἐτέρων, χρυσίων μὲν κάκεινον, ἀλλ' ἡμιχρύσων, ἔστι δ' οὗ καὶ διὰ τῶν χαλκέων ἐδασμοφόρει (Zonaras, *Ep.*, xviii, 22=vol. iii, p. 738, ed. Büttner-Wobst, Bonn<sup>4</sup>).

The changes introduced by Alexius involved not merely the debasement of a single denomination (the nomisma), but the setting up side by side of nomismata of varying intrinsic value. Thus, there was the old *gold* nomisma, of 68-70 grains, which tended to become electrum; there was the new *silver* nomisma, which tended to become billon; and finally, the new *bronze* nomisma. All this produced a hopeless confusion in accounts and furnished fresh opportunities of exaction to the collectors who farmed the

<sup>1</sup> *Rev. num.*, 1866, p. 36 f., on Nicetas.

<sup>2</sup> i.e. the weight of the nomisma (solidus) of earlier reigns.

<sup>3</sup> See p. 530, *infra*, note 1.

<sup>4</sup> Büttner-Wobst translates:—‘Hic rex cum solidum a decessoribus suis adulteratum repperisset, aeneum fecit, quo in regni expensis uteretur; in vectigalibus vero probos aureos exigebat, aliquando etiam nummos semiaureos, interdum aeneos.’

taxes. For instance, the collector of the supplementary taxes (the *δικέρατον*, *ἐξάφολλον*, &c.) sometimes tried the device of reckoning fractions and small payments as if twelve *miliaresia* still went (as formerly) to the *nomisma*. Thus, for a tax of  $\frac{1}{2}$  *nomisma* *six* *miliaresia* were demanded, though the *nomisma* was at this time only worth four<sup>1</sup> *miliaresia*. The contributory thus paid six *miliaresia* instead of two, or (in the new money) one whole *nomisma* + two *miliaresia*.

In large transactions, as e.g. in his treaty with Bohemund, Prince of Antioch, Alexius agreed that his own payments should be made in 'Michaels',<sup>2</sup> i. e. in the *nomismata* coined by Michael VII, thus putting his own money and that of his predecessor *hors de combat*. A subsidy paid by Alexius to the German Emperor Henry IV was discharged in silver coin, a proof, as Finlay has remarked,<sup>3</sup> that Byzantine silver money was formerly not so rare as it now for the most part is.<sup>4</sup>

John II—'Kalojoannes',—who was left by his father's death sole Emperor, has the distinction of being probably the most amiable ruler that ever occupied the Byzantine throne.<sup>5</sup> His reign was not inglorious, and in fortunate campaigns against the Seljūk Turks he extended the boundary of the Empire east and west. But he neglected to restore the fleet, and the Venetians, who now traded direct with the Christian principalities in Syria, and were rapidly becoming the trading rivals of Constantinople, plundered with impunity Rhodes and other islands and coasts of the Empire. In the end, John was forced to renew the commercial privileges of the Venetians in Constantinople (A.D. 1126).

JOHN II,  
COMNENUS,  
15 Aug. 1118  
—8 April, 1143.<sup>6</sup>

The coinage of this reign of nearly twenty-five years is varied, and there are at least seven types of the *nomisma*.<sup>7</sup> Two of these types are entirely in billon, and two others are chiefly in electrum. There are three types, however, usually struck in gold, and it would seem that John—

<sup>1</sup> Or perhaps five.

<sup>2</sup> Finlay, *Hist.*, iii, p. 63 n., and p. 123; Chalandon, *op. cit.*, p. 248; Ducange, s. v. *Michaelitae*.

<sup>3</sup> *Hist.*, iii, p. 74.

<sup>4</sup> On the tax-collecting and the difficulties caused by the new coinage, see an excellent section in M. Chalandon's *Alexis I*, pp. 299–309, founded partly on the model accounts for the revenue-collectors of Alexius I (published, Zachariae von Lingenthal, *Ius Graeco-Romanum*, pt. 3, p. 385 f.).—On the expressions *νόμισμα τραχύ*, *τραχύ ἄσπερον νόμισμα*, which apparently designate the *nomisma* in silver, see Svoronos, *Journ. internat. d'arch. num.*, ii, p. 352 f. According to Svoronos, *νομ. τραχ.* is a translation of *nummus asper*, i. e. a coin fresh from the mint, and rough to the touch because not yet worn smooth by circulation. *ἄσπερος*, as applied to coins (especially to the silver of the Emperors of Trebizond), afterwards—it is suggested—meant 'white' or 'silver' money.

<sup>5</sup> Finlay, *Hist.*, iii, p. 130.

<sup>6</sup> On the chronology, &c., of this reign, E. Kurtz in *B. Z.*, 1907, p. 69 f.

<sup>7</sup> No silver coins, apart from the silver *nomisma*, appear to be extant.

while maintaining the electrum and billon nomismata—made an effort to improve on the gold nomisma of his father Alexius I. The Virgin crowning the Emperor is a frequent type, and the figure of a saint—St. George—is introduced (Pl. LXVII. 12<sup>1</sup>). The warrior-saint wears a cuirass and sword; his hair is curly and his head nimbate.<sup>2</sup>

John II was succeeded by his youngest son Manuel I, Comnenus, a man of extraordinary physical endowments; a Samson who could tear a stirrup in two<sup>3</sup> and whose lance and buckler not even Raymond 'the Hercules of Antioch' could wield. He was a good soldier, but had more the temper of a knight-errant who loved fighting and adventure for their own sake. He was enamoured of Western civilization and delighted in tournaments. Both of his wives were western princesses, and he married his son Alexius to Agnes, daughter of the French king Louis VII.

Manuel's reign of thirty-seven years was spent in incessant warfare. He invaded Hungary and won the battle of Zeugmin. He repulsed the Normans under Roger of Sicily. He was involved in a naval contest with the Venetians, but had finally to restore their trading privileges, which he had tried to suppress. In his struggle with the Seljûks he failed to re-conquer Asia Minor. If in his dealings with the warriors of the Second Crusade Manuel showed considerable discretion, his general foreign policy was grandiose and Utopian; thus, he sought from Pope Alexander III, who was at enmity with Barbarossa, a union between the Eastern and Western churches, a condition being that he should be crowned Emperor of the West. At the same time he neglected to make radical internal reforms—a heroic task, no doubt—and the opportunity of reform was rapidly passing away.

His coinage is varied and abundant, there being at least eight types of the nomisma in the precious metals, and five types of the nomisma in bronze or a mixture of bronze. There are also at least eight types in the ordinary bronze coinage. Gold is not frequently employed for the nomisma, but only a very pale electrum, which is often hardly distinguishable from silver. According to Nicetas<sup>4</sup> he coined bad nomismata to deceive the Crusaders. These may, however, have been only the ordinary bronze or billon nomismata of the time, and Manuel of course was not responsible for the first introduction of the nomisma in bronze.

<sup>1</sup> An earlier but isolated representation of a Saint on coins occurred in the time of Alexander, see *supra*, p. xlvii.

<sup>2</sup> The curly hair and cuirass—sometimes a tunic—are found on other monuments. The Saint, however, usually stands holding a spear and shield: see Schlumberger, *L'Épop. byz.*, i, p. 13; ii, pp. 49, 132, 273; cp. Dalton, *Cat. of Early Christian Antiquities*, s.v. 'Saints'. St. George is found with spear and shield on the coins of Manuel I (Pl. LXX. 16).

<sup>3</sup> So at least says an Arab author.

<sup>4</sup> i, 5; cp. Ducange, *Gloss.*, s.v. Manlat.

As his predecessor had introduced St. George on the coinage, Manuel introduced St. Theodore and St. Demetrius. The head of the youthful Christ, inscribed 'Emmanuel' (Pl. LXVIII. 15), may perhaps have been chosen as suggesting the name 'Manuel'.

Manuel I was succeeded by his son Alexius II, a boy of thirteen, but in Oct. 1183, Andronicus (I, Comnenus), a cousin of Manuel and grandson of Alexius I, was associated with him as joint ruler. In Sept. 1184, Andronicus put Alexius to death and reigned alone.

**ALEXIUS II,**  
**COMNENUS,**  
**24 Sept. 1180**  
**—Sept. 1184.**

The sole reign of Alexius II lasted about three years, and it would seem probable that even in that anarchic period coins were struck in his name. No extant pieces can, however, be attributed to him with any certainty, for all the coins inscribed 'Alexius' show a *bearded* head, and we should expect, even amid the conventionalities of Byzantine coinage, that he would be represented as beardless. However, to the single year (1183–1184) during which Alexius II reigned *jointly* with Andronicus I, some of the coins inscribed with the sole name of 'Andronicus' may possibly belong.

Andronicus Comnenus is one of the most striking, though not one of the most important, figures who occupied the Imperial throne. He has been described as a Byzantine Alcibiades, and he was, indeed, in character, as many-sided as his Athenian prototype. He had the same ambition, the same intellectual gifts and personal charm, combined with an almost equal want of moral stability. Viewed from some aspects, he may be portrayed as a blood-stained tyrant and a traitor to his country. But he appears also as a romantic adventurer at Turkish courts, and even as a prison-hero. He was, no doubt, a profligate, but (as Mr. Finlay puts it) 'a sober and abstemious profligate.' Certainly he had many qualities of a statesman, and in his brief reign, when he was nearly seventy years old, carried through with iron will reforms which, if begun earlier or continued later, might have propped a falling state.

**–12 Sept. 1185**  
**(alone).**

These reforms were chiefly in finance, judicature, and general administration. He lightened the taxes and paid the tax-collectors large salaries, that so they might be less tempted to extortion. He abolished many useless posts that had previously been sold to the highest bidder, and appointed to the judicial bench men of professional knowledge and high character. Like Basil II and other great Emperors, he tried to curb the feudal nobility, whose vast estates had been acquired to the detriment of the small proprietor. His interference with the public spectacles, and his abolition of court-festivities, were likewise excellent in theory, but probably hardly expedient: certainly these measures earned

for the reformer immense unpopularity, and the people came to have a peculiar detestation of any aged man who wore the forked and pointed beard that was characteristic of Andronicus.<sup>1</sup>

On 12 Sept. 1185 (when Andronicus had reigned alone but one year), a rising of the mob of Constantinople set on the throne Isaac Angelus, a survivor of the great family of the Angeli, which Andronicus had ruthlessly suppressed. Andronicus was not only dethroned, but put to death with refinements in the way of torture and indignity that can hardly be described.

In his coinage, Andronicus had made no innovations. His nomisma is of gold, electrum, and bronze, but seems to be scarce in the two first metals. When Andronicus was dethroned, great stores of gold, silver, and copper, both coined and in bullion, were found in the palace.<sup>2</sup>

Isaac II, in his love of pleasure, and inattention—amid a luxurious court—to public business, recalls king Charles II, though he had, probably,

ISAAK II,  
ANGELUS,  
12 Sept. 1185  
—8 April, 1195.

less natural ability than the English monarch. His reign was signalized by a great rebellion of the Wallachian and Bulgarian peoples between the Haemus and Danube: a new monarchy, the Wallachian, was formed, and the great work of Zimisceus and Basil was brought to naught. Cyprus, also, was lost to the Empire, and the rebel ISAAC, DUCAS COMNENUS, ruled there as 'Emperor' (1184–1191), and issued coins<sup>3</sup> until he came into ill-advised collision with Richard the Lion-hearted, who seized the island and gave it to Guy de Lusignan.

The revolt of THEODORE MANKAPHAS (1189 and later), who became master of the country round Philadelphia, and likewise assumed the title of Emperor, requires some mention here, as, according to Nicetas,<sup>4</sup> he struck silver money with his own effigy. But this coinage has not been identified with certainty.<sup>5</sup>

Isaac II is accused by Nicetas of debasing the currency,<sup>6</sup> but it must be said that his extant money is not worse than that of his predecessor Andronicus I, the nomisma being in gold, pale electrum, billon, and bronze.<sup>7</sup>

<sup>1</sup> See this beard represented on the coins of Andronicus I, *infra*, p. 583, No. 1, and Pl. LXXI. 3, 4.

<sup>2</sup> Nicetas, 223; cp. Finlay, iii, p. 220; E. Miller in *Rev. num.*, 1866, p. 40.

<sup>3</sup> His rebellion had begun in the previous reign. See *infra*, p. 597, on his coinage.

<sup>4</sup> *Hist.*, p. 522, ed. Bonn:—ἀργύρεον κέκοφε νόμισμα τὴν οἰκίαν ἐγχαράξας ἐν αὐτῷ στήλιν.

<sup>5</sup> A silver nomisma (*obv.*, Imperial figure crowned by the Virgin; *rev.*, bust of Christ) is assigned to Mankaphas by Thomsen *Cat.*, No. 809, Pl. I; but the legend of the *obv.* seems very indistinct.

<sup>6</sup> P. 584, ed. Bonn:—ἀλλὰ καὶ τὸ ἀργύριον κιβδηλεύσας ἀδόκιμον τὸ νόμισμα κέκοφε.

<sup>7</sup> The archangel Michael appears on his coins (Pl. LXXI. 16) wearing a cuirass and not the long robes in which he is often represented in Byzantine art.

Isaac II was deposed (8 Apr. 1195) by his brother Alexius III, who blinded him and kept him in prison.

Alexius III was another weak Emperor, heedless of public business. At his accession he made a lavish distribution of honours, titles, and money, and was ready (it was said), if requested, to pile Athos upon Olympos. His coinage is abundant and, like that of Isaac II, includes the *nomisma* in gold, pale electrum, and inferior metals. But the taxation that he authorized was crushing; the army and navy were out of gear; roads, bridges, and aqueducts were left in a ruined state, and in spite of the magnificence and wealth of the capital, the general condition was one of national demoralization.<sup>1</sup>

His reign ended on 17 July, 1203, when a great blow fell upon the Empire with the first capture of Constantinople by the Venetians and the warriors of the Fourth Crusade.

The Crusaders brought forth Isaac II from his prison and restored him to the throne in conjunction with his son Alexius IV. No coins are known of this joint reign, which lasted rather more than six months.

A rising in the capital against the Franks was headed by Alexius V, who was crowned 5 Feb. 1204, and stood manfully at his post till the final great storming and capture of Constantinople by the Crusaders on 12 April (1204). A *nomisma* in bronze (Thomsen *Cat.*, No. 811) and a bronze coin (Sabatier, Pl. 58, 14<sup>2</sup>) have been assigned to this brief reign, but both attributions are perhaps open to doubt.

The great orgy of plunder—the pillage of shrine and reliquary; the destruction of priceless works of ancient art, was followed by the establishment of the new line of Latin Emperors.<sup>3</sup>

Yet neither Baldwin, Count of Flanders, nor his successors, who reigned till 1261, appear

to have assumed the Imperial right of coinage. The few bronze coins which Sabatier and others have ascribed to these Emperors bear no Imperial name and belong rather (as I have endeavoured to show<sup>4</sup>) to the time of Alexius I and the *First* Crusade.<sup>5</sup> M. Schlumberger has well

<sup>1</sup> E. Pears, *Fall of Constantinople*, pp. 102 f., 113.

<sup>2</sup> A specimen of this coin in the British Museum reads ΔΕCΓ, the rest of the legend being quite obscure. It is perhaps of the Empire of Nicaea.

<sup>3</sup> E. Gerland, *Gesch. des lateinischen Kaiserreiches von Konstantinopel*, 1905, &c.

<sup>4</sup> *Infra*, p. 554.

<sup>5</sup> Yet it would appear from Nicetas, that bronze coins were minted *circa* 1204, made

suggested<sup>1</sup> that the coins current under the Latin Emperors, 1204–1261, were the silver coins of Venice, and that the mints were controlled by Venetians.<sup>2</sup> This is probable enough when we consider the commercial importance of Venice at Constantinople; the predominating part that she played in diverting the Fourth Crusade to the capture of the Capital, and the large share that she enjoyed from the spoils of the divided Empire (Crete, the Aegean Islands, &c.)

The Empire was now split up into a number of feudal principalities, and into the so-called ‘Empires’ of Nicaea (1204–1261), Thessalonica (1223–1234), and Trebizond (1204–1462). The coins issued by these ‘Emperors’ are of the familiar Byzantine types and fabric,<sup>3</sup> but as the description of them lies beyond the scope of these volumes, we must again take up the story of the Empire in the year 1261, when Michael VIII, Palaeologus, the last Emperor of Nicaea, ousted Baldwin II, the last Latin Emperor, and himself reigned at Constantinople as monarch of the restored Eastern Empire.

Michael VIII, the first of the dynasty of the Palaeologi, was crowned on 15 Aug. 1261. He ruled over a shrunken Empire, shorn of its ancient glories, and was the last Emperor of any conspicuous political and military ability. Under the Palaeologi, Constantinople, though no longer—in face of Italian competition—the commercial emporium of the world, still remained a centre of artistic and intellectual culture, but the two centuries of their rule are marked by the decadence of the Empire as a whole.<sup>4</sup>

Michael’s gold nomismata (Pl. LXXIV. 1–4) represent on the obverse the kneeling Emperor supported by St. Michael from bronze statues melted down: see Nicetas, *De Signis*, pp. 856 and 859. Ἰὼν καὶ ταῦτα [statues in the Hippodrome, &c.] κεκόφασιν εἰς νόμισμα, ἀνταλλασσόμενοι μικρῶν τὰ μεγάλα, κτλ.

<sup>1</sup> *Num. de l’Orient lat.*, p. 274.

<sup>2</sup> The principal denomination in the Venetian coinage was the silver *Ducato* or *Matapan*, more often called the *Grosso*. This coin was instituted by Enrico Dandolo the Doge (A.D. 1192–1205) who took so prominent a part in the capture of Constantinople. (See N. Papadopoli, *Monete di Venezia*, i, 1893, p. 84.) The Venetian gold ducat (*Zecchino d’oro*) was not known in the period of the Latin Empire, for it was first coined in A.D. 1284.

<sup>3</sup> Those of Trebizond (silver ἄσπρα) are less distinctively Byzantine.

and crowned by the Saviour. The reverse type is still more original, and represents (as Pachymeres has recorded) the city of Constantinople. The representation is conventional, and consists of the encircling walls, flanked by towers arranged in groups of three. Only the inner wall, the main bulwark (τὸ μέγα τεῖχος) of the city, is reproduced. The outer wall (τὸ ἔξω τεῖχος), which was separated from the inner by a moat, and flanked by towers of lesser height, has not been indicated by the engraver.<sup>1</sup> In the centre is a figure of the Virgin *orans*. It is conceivable that the idea of this type may have occurred to the Emperor when, just before his coronation, he entered Constantinople through the Golden Gate with the image of the Virgin Hodegetria borne before him, or when his attention was directed—as it soon was—to the restoration of the walls of the city guarded by God or by the Mother of God.

Pachymeres<sup>2</sup> states that he debased the coinage more than his predecessors, but an analysis has shown that some (at any rate) of his gold pieces are not inferior in fineness to the gold coinage of an earlier thirteenth-century ruler, Theodore II, Lascaris, of Nicaea, which are '16 carats fine and 8 alloy'.<sup>3</sup> Some extant specimens, however (see, e.g., Michael VIII, *infra*, No. 3), have a brownish colour, which suggests the presence of a considerable alloy of copper.

Michael VIII was succeeded by his son Andronicus II, who had already been joint ruler (from A.D. 1273?), and had probably issued bronze coins (see *infra*, p. 613, note) in conjunction with his father.

**ANDRONICUS II,**

**11 Dec. 1282**

**-24 May, 1328.**

The long reign of Andronicus II lasted till 1328, and witnessed the rising power of the Ottoman Turks under Othman, and the incursion of the Grand Company of the Catalans who, if they drove off the Seljûks, made conquests on their own behalf and to the Empire's detriment. Moreover, from 1321 till 1325, a civil war went on between Andronicus II and his grandson Andronicus III.

The coinage may be divided into four Periods. In Period I, A.D. 1282-1295, Andronicus II ruled alone. He struck gold nomismata, much alloyed, generally it would seem with copper.<sup>4</sup> On these he retains as the reverse type the View of Constantinople, and with some appropriateness, because he himself afterwards undertook (in 1317) a general repair of the fortifications of the Capital. On the *obverse*, the Emperor appears

<sup>1</sup> See Van Millingen, *Byzantine Constantinople* (The Walls), and cp. the map (frontispiece) of Bondelmontius, A.D. 1422, showing the circuit of the walls; cp. *Journal of the British School at Athens*, xii (1905-6), Pl. I. 2; p. 214 (Hasluck).

<sup>2</sup> Lib. vi, cap. 8 = vol. ii, p. 493, ed. Bonn, and Svoronos's comment, *Journ. internat. d'arch. num.*, ii, p. 347; Finlay, *Hist.*, iii, pp. 320, 352.

<sup>3</sup> H. P. Borrell in *Num. Chron.*, iv, 1841, p. 21.

<sup>4</sup> The lowering of the standard of fineness is recorded by Pachymeres; see Finlay, *Hist.*, iii, pp. 320, 397.

prostrate before the Saviour (Pl. LXXIV. 10-12), and this figure of Andronicus recalls the figure of an Emperor (before the enthroned Saviour) in a well-known mosaic of St. Sophia.<sup>1</sup>

In Period II, 1295-1320, Andronicus II is associated on the coins—as he was in the Empire—with his son Michael IX. On the gold nomisma

**MICHAEL IX,**

21 May, 1295

-12 Oct. 1320

(with

**ANDRONICUS II).**

(Pl. LXXV. 2) Christ is seen in the act of blessing or crowning the joint rulers.<sup>2</sup> We note at this time, or a little later, traces of Western influence on the coinage. The silver coin is in fabric and type a servile copy of the Venetian *grosso* or *matapan* (Pl. LXXV. 17), and some of the bronze

coins have a Western look due to the adoption of the *circular* inscription and the type of the cross pattée or potent with pellets in its angles (Pl. LXXV. 16).

The coinage of Period III, Oct. 1320-1325, is not easily to be identified. On the death of Michael IX in 1320, Andronicus II was again left sole Emperor. Some of the coins assigned to Period I may perhaps, therefore, belong to this later period of his solitary rule. There is, again, the possibility that his grandson Andronicus III—though not actually crowned Emperor till Feb. 1325—may have been associated with Andronicus II during this period; and, on this hypothesis—not, however, a very likely one—some of the coins assigned to Period IV would belong to Period III.

**ANDRONICUS II,**

2 Feb. 1325

-24 May, 1328

(with

**ANDRONICUS III).**

In Period IV, 1325-1328, Andronicus II and Andronicus III are associated as Emperors. The coins that have been assigned to them usually bear—perhaps purposely—the rather vague inscription **AVTOKRATOPES PWMAIWN**.

**ANDRONICUS III**

(alone),

24 May, 1328

-15 June, 1341.

In May, 1341, on the abdication of Andronicus II, Andronicus III became sole ruler. His coinage is scanty, and no gold coins appear to have been struck.<sup>3</sup> It was in this reign that Orkhan, the son of Othman, captured Nicomedia and Nicaea, and completed the Turkish conquest of Bithynia.

Andronicus III was succeeded by his son John V, Palaeologus, a boy of nine. His long reign brings us near to the end of the fourteenth century, and is marked at every stage by loss of territory and financial distress. The real Emperor<sup>4</sup> of the early part of this period was the Servian monarch Stephen Dushan who styled himself 'Car and Autokrator of the Servians and Greeks, the

<sup>1</sup> Bayet, *L'Art byz.*, 3rd ed., p. 53, fig. 12; Salzenberg, Pl. XXVII.

<sup>2</sup> The nomisma (Pl. LXXV. 3) representing, apparently, the Empress Irene with her husband and their son Michael IX should be noticed.

<sup>3</sup> The coin, No. 1, p. 629, *infra*, often described as of gold, is really of silver (gilt).

<sup>4</sup> Cp. Gelzer in Krumbacher's *Gesch. Byz. Lit.*, p. 1057.

Bulgarians and Albanians'. Later, the Sultan Murad I, the successor of Orkhan, extends the Turkish borders to the Balkans, and John V becomes his vassal.

The dynastic troubles and changes of this period are likewise manifold. At the very outset of John's reign he was opposed by a rival Emperor in the person of John VI, Cantacuzenus, the Grand Domesticus, now chiefly interesting to us as an historian, and for the part that he played in hastening the invasion of the Turks.<sup>1</sup> After a long civil war, John VI was formally acknowledged Emperor in 1347, but abdicated in 1354.

**JOHN VI,  
CANTACUZENUS,  
26 Oct. 1341  
(re-crowned Feb.  
1347)—Dec. 1354.**

Other Imperial figures flit across the scene. MATTHEW, the son of John VI, was made joint Emperor with his father in 1353. MANUEL II (see further, *infra*), the second son of John V, was crowned joint Emperor in 1373. ANDRONICUS IV, the eldest son of John V, temporarily ousted his father from the throne in 1376, and ruled as Emperor.

**ANDRONICUS IV,  
18 Oct. 1376—1379.**

It is disappointing to find the coinage of this whole period so scanty. The unearthing of a hoard, or a more careful examination of the very obscure coinage of the Palaeologi, may modify our views, but at present it would seem that there was no issue of gold money from 1341 to 1391, while even some of the coinages attributed by Sabatier and other numismatists to John V may perhaps have to be withdrawn; for instance, the bronze and silver pieces inscribed ΠΟΛΙΤΙΚΟΝ (p. 632, *infra*) seem to be rather tickets than coins.

**Coins of the reign  
of JOHN V.**

There are no coins that can be readily attributed to John VI or to his son Matthew, though there are some pieces that may be assigned, if not without hesitation, to Manuel II (in conjunction with his father, John V), and to the rebellious son, Andronicus IV.

The known straits of the Imperial Treasury, and the shabby make-shifts of a court where (as at the coronation in 1347) gilded leather took the place of gold, and glass of precious stones,<sup>2</sup> seem to find expression in the mean currency of the period. It may well be suspected that throughout this long reign of John V the Imperial mints almost ceased to be operative, and that the currency of the dwindling Empire was mainly furnished by the abundant issues of Venice and Genoa, its great and intrusive rivals.<sup>3</sup>

<sup>1</sup> Cp. Jorga in *B. Z.*, 1906, p. 222. M. Diehl (*Études byz.*, p. 232) says:—'Jean Cantacuzène, vrai Byzantin, au meilleur sens du mot comme au pire: intelligent, instruit, un des plus habiles politiques de son temps: écrivain de mérite, l'un des plus distingués de son siècle; mais ambitieux à l'excès, sans scrupules, dénué de sens moral autant qu'un Borgia, et avec cela capable de sentiments mystiques, et qui finira dans la paix du cloître sa longue existence troublée.'

<sup>2</sup> Parisot, *Cantacuzène*, p. 228.

<sup>3</sup> Cp. Diehl, *Ét. byz.*, p. 240 f., 'La colonie vénitienne à Constantinople à la fin du XIV<sup>e</sup> siècle.'

A serious effort to restore the Imperial coinage was evidently made by John V's son and successor, Manuel II, an able, magnanimous and accomplished man, worthy of a wider Empire than one that had shrunk almost to Constantinople, Thessalonica, and a province of Peloponnesus. He restored the gold nomisma, retaining the familiar type of the View of Constantinople, but this coin is now, from whatever cause, extremely scarce, and the bulk of Manuel's extant currency consists of silver pieces which must have been issued in considerable quantities. There are three or four denominations of the silver, the highest of which, judging by the similar coins of Manuel's successors, was intended to weigh about 135 grains.<sup>1</sup>

In his struggle with the Turks, Manuel sought aid from the West, and is now, as then, an interesting figure to Frenchmen and Englishmen.

**JOHN VII,**  
**4 Dec. 1399-1402**  
 (with **MANUEL II**).

In 1400 he was in London, the guest of King Henry IV. During his absence (till 1402) his nephew John VII was regent and co-emperor, and John is probably the Emperor who figures on a bronze coin of Manuel II (*infra*, p. 639). The Turkish pressure on the Empire was at last relieved by the invasion of Timūr, the famous Khan of the Mongols who, in the great battle of Angora, A.D. 1402, defeated Sultan Bayezid, and for a time annihilated the Ottoman power. The Empire had thus a breathing space till 1422, when the Turks—with renewed hostility—laid siege to Constantinople. In the following year Manuel, stricken by apoplexy, retired to a monastery, to die two years later.

Manuel's son John VIII continued the silver coinage on his father's model. It is now not uncommon, but no gold money is known.<sup>2</sup> John's

**JOHN VIII,**  
**PALAEOLOGUS,**  
**1423-3 Oct. 1448.**

long reign was passed in peace, but in ignoble peace as a vassal of the Turks. In 1423 his brother, the governor of Thessalonica, sold this city to the Venetians, and seven years later it was annexed by the Turks. John's efforts on behalf of the Empire were chiefly confined to the restoration of the walls of the Capital, and to seeking aid from the Pope against the Unbeliever. In 1438 he attended the Council of Ferrara (a Council continued at Florence), and as the price of such assistance as the Pope afforded him agreed to the union of the Eastern Church with the Church of Rome. It was doubtless in 1438 and at Ferrara that Vittore Pisano made the wax model that he utilized for his well-known medal of the Eastern Emperor.<sup>3</sup> Pisano's medal (see Frontispiece to

<sup>1</sup> On the silver coinage of this period cp. Finlay, *Hist.*, iii, p. 490 n.

<sup>2</sup> A gold bulla of John VIII is published by Schlumberger, *Mélanges d'arch. byz.*, i, p. 184, No. v, Pl. X. 4.

<sup>3</sup> G. F. Hill, *Pisanello*, p. 106 f.; Pl. 29.

vol. ii of this work) shows the Emperor's head in profile, wearing a tall, helmet-like head-dress, with a jewelled apex and a great brim of strange device. And it is interesting to compare this portrait by the first and greatest of the Renaissance medallists with the portrait produced by the latest of the Byzantine mint-engravers, who had inherited traditions reaching back to Constantine and even to Augustus (Pl. LXXVII. 7-13). The coin-portrait of John may, perhaps, be set aside by some numismatists as purely conventional, since it closely resembles that of his aged father, Manuel II. But this resemblance may be due to a family likeness, and I think we may discern on the coin some attempt at reproducing the mild, grave, *insouciant* expression of Palaeologus, which is rendered with such artistic delicacy on the medal.<sup>1</sup>

Of Constantine XI, John VIII's brother and successor, no coins have been identified.<sup>2</sup> It is hard to believe that he struck no money. If his coronation, through taking place at Sparta, did not involve the customary largesses, his subsequent entry into Constantinople must have done so, and coins must have been needed even in the few troubled years that followed. Constantine,

CONSTANTINE XI,  
1 Nov. 1448  
(crowned Jan. 1449)  
-29 May, 1453.

one of the best and bravest of the Palaeologi, was confronted by Mohammad II, 'the most commanding personality among the whole race of Ottoman Sultans.'<sup>3</sup> A cause of quarrel was soon found by the ambitious Sultan, and the actual siege of the great city guarded of God began in April, 1453. On 29 May the cannon of the Turks made its fatal breach in the walls, and the enemy poured into the city over the dead bodies of the Emperor and his gallant companions. The next day the Sultan<sup>4</sup> entered Constantinople, and the dome of St. Sophia rang with the cry 'Mohammad is the prophet of God.'<sup>5</sup>

The great edifice of Empire had long been tottering, yet even to

<sup>1</sup> Compare also with the head-dress on the medal, the crown on the coin, which is shaped like a helmet and surmounted by a pearl. In addition to Pisano's medal there are two contemporary representations of John VIII: (i) The bas-reliefs on the bronze doors of St. Peter's at Rome by Averlino (called *Filarete*). These reliefs show the Emperor at the Council of Ferrara-Florence; his departure from and return to Constantinople. (ii) Bronze bust, life-size, in the Museum of the Propaganda, Rome, closely resembling the medal by Pisano. Lazzaroni and Muñoz (*Comptes rendus, Académie des Inscriptions*, 1907, pp. 300-309, cp. their monograph *Filarete*) ascribe it to Filarete, A.D. 1439. Cp. also Hill, op. cit., p. 111 n.

<sup>2</sup> His gold bullae are extant and there is a fine specimen in the Vienna Museum, engraved, Von Sallet, *Münzen und Medaillen*, Berlin, 1898, p. 105; see also Schlumberger, *Mélanges d'arch. byz.*, i, p. 64; cp. *B. Z.*, 1905, p. 743, citing Sp. Lambros.

<sup>3</sup> Oman, *The Byzantine Empire*, p. 343.

<sup>4</sup> The bronze coins with Greek inscriptions attributed in Sabatier, Pl. 64, 4, 5 to Mohammad II are now recognized as the money of the Danishmend Dynasty: see Casanova in *Rev. num.*, 1896, p. 217 and Schlumberger, *Mélanges*, i, p. 10.

<sup>5</sup> Oman, op. cit., p. 349.

the student who has attentively observed the leading features of its history, art and coinage, the fall seems to come with suddenness. A familiar landmark of the world's history is removed; and the glory of Byzantium fades almost like the 'insubstantial pageant' of the magician.

### § 3. DENOMINATIONS AND WEIGHTS.

At all periods the coinage in gold was of the first importance, and extant specimens in this metal are very common. Coins in silver, on the other hand, are now rare, though they were probably fairly abundant in antiquity (cp. p. lxiii, *supra*). The bronze coinage was entirely re-organized by Anastasius I in 498, and under his successors, till about the time of Constantine IV, formed no unimportant part of the state-currency.

#### GOLD.

The chief coin is the *solidus* or, as usually named in Byzantine authors, the *nomisma*.<sup>1</sup> The weight of this coin varied but little through the long period of its existence. It is always (when struck at the Capital) of more than 60 grains, and the heaviest extant specimens usually weigh from 68 to 70 grains.<sup>2</sup> The fineness of the Constantinopolitan *nomisma*—so far at least as the eye can discern, and in the absence of a systematic series of analyses—is well maintained almost till the reign of Michael VII (A. D. 1071), when the *nomisma* tends to become an *electrum* coin. Somewhat later, under Alexius I, the *nomisma* (as explained *supra*, p. lxi) was issued in several different metals simultaneously, but there was evidently

<sup>1</sup> I am not able here to enter into a detailed account of the varying names, or nicknames, borne by the *solidus* and other Byzantine coins at different periods (*Romanati*; *Michalati*, &c.). This subject would alone require a little treatise to itself. Some material may be found in Du Cange's Dissertation on Byzantine Coins; in an article in *Revue archéol.*, 1876, xxxii, p. 283; in Svoronos, *Journ. d'arch. num.*, ii, p. 345, &c.; A. Engel, *Recherches sur la numismatique . . . des Normands de Sicile et d'Italie*, Paris, 1882, pp. 72–75 (*nummi schifati*; *besantii*; *Romanati*, &c.); Diehl, *Études byz.*, p. 249 (*hyperpre*; cp. Svoronos, op. cit., ii, pp. 362, 345 n., *ὑπέρπυρον νόμισμα* = the *solidus*; Schlumberger, *Principautés Franques du Levant*, p. 7; Kubitschek in *Num. Zeitschrift*, xxix, 1897 (1898), p. 163 f., on the *solidus*, &c., in Egypt). For the world-wide use of the *solidus* in the time of Justinian I there is the testimony of Kosmas Indicopleustes, cited by Mommsen, *Gesch. des röm. Münzwesens*, p. 817.—On the 'bezant' as money of account in Cyprus and on the *bisante bianco* of Cyprus (the last-named not an Imperial Byzantine coin), see N. Papadopoli, *Le Monete di Venezia*, ii, p. 484.—On the name 'bezant' applied (twelfth and thirteenth centuries) to Arab gold coins (*dinars*), see P. Casanova in *Rev. num.*, 1897, p. 535.

<sup>2</sup> Specimens that attain 70 grains are, however, decidedly uncommon. A *solidus* of Justin I weighs 70.3 grs. A gold *nomisma* of John II weighs 74.2; one of Alexius III, 74.6; Manuel II, 72.5. The *solidus* of the 'Provincial' and 'Italian' coinages weighs less than 68, viz. 60–65 grs., and is often much alloyed. Throughout this section the weights cited (unless otherwise stated) are those of coins in the British Museum.

an attempt made to preserve at least one type of it unalloyed. The wide European circulation of the 'bezants' (*nomismata*) was probably one reason why the standard of fineness was protected from a more rapid deterioration.

From the time of Anastasius I till the period of Constantine V, the solidus is accompanied by two small divisions, the half (*semissis*) and the third (*tremissis*). After the last-named reign these divisions were not issued with the same regularity, and in the tenth century they entirely disappear.

#### SEMISSIS AND TREMISSES.

The *semissis* always exceeds 30 grains, and the *tremissis* 20 grains. The usual weight of the *semissis* may be stated as from 34 to 35 grains, and the weight of the *tremissis* as from 22 to 23 grains.<sup>1</sup> The weights of these divisions point to a solidus of about 70 grains.

In the reign of Basil II and Constantine VIII, i. e. about the beginning of the eleventh century, we find (as already noted, p. liii) the curious phenomenon of a heavy and light *nomisma* side by side. The *light* coin bears a general resemblance to the old solidus in fabric, but weighs, at the most, only 63 grains.<sup>2</sup> The *heavy* coin is of a novel (cup-shaped) fabric, but maintains the weight of the familiar solidus—68 to 69 grains.

#### LIGHT AND HEAVY NOMISMA.

The light *nomisma* disappeared under Alexius I (*circa* A. D. 1081) or under his predecessor, leaving the heavier scyphate coin in possession of the field. The curious scyphate form has never been satisfactorily explained, and is usually supposed to have been adopted for some mechanical convenience in striking. Yet we find that flat coins (in bronze and silver) of the usual fabric continue to be struck at the same time as the scyphate pieces, and I would suggest that the original reason for the adoption of this peculiar fabric was simply in order to distinguish the heavy from the light *nomisma*. It would be thus a device of the kind that we sometimes find in modern coinages when a nickel coin is issued with a hole in its centre, in order that it may be readily distinguished from any contemporary silver coins which it resembles in size and colour.

#### SILVER.

The silver coinage, on account of its comparative rarity, cannot be thoroughly studied until something like a *Corpus* of extant specimens is available; it may be useful, meanwhile, to set forth in detail the weights of representative coins, mainly those in the British Museum.

#### SILVER.

<sup>1</sup> The *semissis* rarely weighs quite 35 grs., though this weight is found under Constans II. The *tremissis* sometimes slightly exceeds 23 grs., as 23.2 (Constans II); 23.5 (Constantine IV).

<sup>2</sup> This weight occurs under Michael VII. The usual weight is 62 grains, a little more or less.

The chief mint is Constantinople. Carthage, Ravenna, and Rome also coin in this metal, but their issues, as a rule, consist only of pieces of the lowest denominations. The principal coin, till the time of Heraclius, was the *miliaresion* (*miliarense*), which had been introduced by Constantine the Great, and which, after being struck in succeeding reigns, continued to be issued by Anastasius I and his immediate successors. Its normal weight approaches 4.55 grammes, i. e. over 70 grains Troy.<sup>1</sup>

In the following lists the weights (unless otherwise stated) are in Troy grains.

ANASTASIUS I. 29.3 (*siliqua*; ? normal about 40). 1 gram. 42—1 gram. 28 = 22—20 grains (*half-siliquae*).<sup>2</sup>

JUSTIN I. 61.4 (pierced); 60.8, 52; also 44.0 gram. (= 68 grains) in French coll. (*miliaresion*). 2 gram. 22—2 gram. .09 (= 34—33 grains) in French coll. (*half-miliaresia*).<sup>3</sup> 29.4, 27.9 (*siliquae*).

JUSTINIAN I. 75.5, 64.8. Specimens in French Coll. 67 to over 68 grains Troy: Dieudonné, in *Rev. num.*, 1899, p. 196; Babelon, *Traité*, I, p. 571 (*miliaresion*). The small coins of Carthage weigh 19.3, 15.3, 10.1, each of these being of a different type.

Of the four following reigns there are (at least in the British Museum) only coins of small denominations, as follows:—

JUSTIN II. 16 (Constantinople mint); 18.4 (Carthage mint).

TIBERIUS II. 17.7, 9.7 Carthage; 7 Ravenna. (A large silver medallion, Photiades *Cat.*, Pl. I, No. 225).

MAURICE TIBERIUS. (No Constantinople silver); 14.5, 12.3 Carthage; 5.6 Ravenna.

PHOCAS. (No Constantinople silver; cp. p. 164, note 2, *infra*). 9.5 Carthage (injured); 6.5 Ravenna.

HERACLIUS. Under Heraclius, in A.D. 615, a new silver coin, the *hexagram*, is issued (cp. p. 195, n., *infra*). This coin generally weighs more than 100 grains: the highest weight in the British Museum is 105.3. Its issue is continued in the three following reigns, and under Heraclius it was coined at Ravenna as well as at Constantinople. Also, coins weighing 10.5, 11.6, 12.7 (worn) all of Carthage; 7 Ravenna.

CONSTANS II. 104.8, 105.5 (hexagram; abundant); 8.2 Carthage; 6.2 Rome; 5.5 Ravenna.

CONSTANTINE IV. 102.2 (hexagram); 8 Rome; 4.7 Ravenna.

JUSTINIAN II. 102.3 (hexagram).

Tiberius III, Philippicus, Anastasius II, Theodosius III, Leo III. No coins in British Museum. (A coin of TIBERIUS III in *Rev. num.*, 1865, p. 286, weighs 3.32 grammes (about 51 grains); perhaps a clipped specimen of the hexagram.)

<sup>1</sup> Babelon, *Traité*, i, p. 570.

<sup>2</sup> *Ibid.*, l. c.

<sup>3</sup> *Ibid.*, i, p. 579.

CONSTANTINE V. The hexagram having ceased to be coined, Constantine V (A. D. 741-775) inaugurated a silver piece characterized by its thin, flat fabric, and by a reverse 'type' consisting entirely of an inscription. This coin was minted in most succeeding reigns, and remained, practically, the sole representative of Byzantine silver currency till the reign of Alexius I. Extant specimens, which are often fairly common, vary a good deal in weight: the coin often attains more than 40 grains, and sometimes reaches 50 grains.

CONSTANTINE V. 29.8 (worn). At Rome, a coin of 7.6.

LEO IV. 32.7.—CONSTANTINE VI. 41.—MICHAEL I and THEOPHYLACT. 32.6.—LEO V. 34.5.—MICHAEL II. 25.—THEOPHILUS. 47.5.—MICHAEL III. 31.6 (pierced).—BASIL I. 42.6.—LEO VI. 44, 48.7.—PERIOD OF CONSTANTINE VII. 50.2.—NICEPHORUS II. 44.4.—JOHN I. 49.7.—BASIL II and CONSTANTINE VIII. 46.2. An exceptional specimen (ii, p. 487, note 1, *infra*) weighs nearly 67 grains, and would seem to belong to a special denomination.—(Constantine VIII, alone, Romanus III, Michael IV and V. No silver coins in British Museum.)

CONSTANTINE IX. 23 grains. Nos. 16 and 17, p. 502, *infra*, are of another module and fabric. They weigh 32.4 and 37 grains respectively, and must originally have weighed more.

THEODORA. About 19 grains (pierced: Paris Coll.).—MICHAEL VI. (No silver in Brit. Mus.).—ISAAC I. 1 gram. 38 (= over 21 grains), Paris.—CONSTANTINE X. 19.5 grains (pierced; Brit. Mus.); 24 grains (pierced; Paris).—ROMANUS IV. With *rev.* Bust of Virgin, 11.3 (broken and pierced); with *rev.* Virgin and Child, *inscr.*, ΠΑΡΘΕΝΕ COI &c., 41.8.

MICHAEL VIII. *Obv.* Two busts; *rev.* *Inscr.*, 34.3. *Rev.* Virgin standing, 38.3 (pierced). *Obv.* Christ seated. *Rev.* *Inscr.* 16.7 (worn). *Obv.* Bust of Virgin. *Rev.* *Inscr.* 20.7.

NICEPHORUS III. *Rev.* *Inscr.* 18 grains (Berlin Mus.).

ALEXIUS I (A. D. 1081-1118), who made changes in the nomisma, introduced a new silver coinage. Though, like his predecessors, he issues a thin coin with the reverse consisting of an inscription (a specimen in Brit. Mus. weighs 32 grains), his silver money consists mainly of thick pieces of small module which are usually of the same fabric and general appearance as his bronze coinage. The types employed are numerous, but the denomination throughout is the same, as follows:—

<i>Obv.</i> Emperor standing.	<i>Rev.</i> Christ standing. 60.3.
<i>Obv.</i> Emperor standing.	<i>Rev.</i> Christ seated. 58.
<i>Obv.</i> Bust of Emperor.	<i>Rev.</i> Christ seated. 57.2.
<i>Obv.</i> Bust of Emperor.	<i>Rev.</i> Bust of Christ. 50.6.
<i>Obv.</i> Bust of Emperor.	<i>Rev.</i> Bust of Virgin. 54.8.

(John II, Manuel I, Andronicus I, Isaac II. No silver coins in Brit. Mus.).

ALEXIUS III strikes a coin of the old thin fabric with *rev.* Inscription. A worn specimen in Brit. Mus. weighs 16.3 grains.—(MICHAEL VIII. No silver in Brit. Mus.: Photiades *Cat.*, No. 573, describes a silver coin.)

Under ANDRONICUS II and MICHAEL IX (A.D. 1295–1320) a serious attempt was made to restore the silver currency, and a model was found in the *grosso* (or *matapan*), the neatly struck silver coin of the Venetians. Coins (in the British Museum) struck on this model weigh as follows:—ANDRONICUS II and MICHAEL IX, 31.1. (There is also a lower denomination, *rev.* Cross radiate and circular inser., weighing 20.)—ANDRONICUS II and III, 32.4, 32.3, 31; ANDRONICUS III, 33.6.

JOHN V. *Rev.* Bust of Christ, 15.4 (pierced and worn).—(JOHN VI. No coins known.)—ANDRONICUS IV. Small silver or billon, 13.2, 10.6.

Under MANUEL II (A.D. 1391–1423) there is again a reform in the silver coinage, and specimens in this metal are still comparatively abundant. Manuel had re-introduced the gold *nomisma*, but it does not seem to have been an important element in the currency of the time. The weights of the silver coins in the Brit. Mus. are as follows:—

Size .95. Wt. 111.5 (broken).

Sizes .8–.7. Wt. 54.4, 54.6, 55.2, 56.5, 55.8.

Size .6. Wt. 14.2 (broken), 11.3, 8.

Of JOHN VIII (A.D. 1423–1448) no gold coins are known. His silver is of the same character as that of Manuel II, as follows:—

Sizes 1.1–1.05. Wt. 132, 133.8, 129.

Sizes .8–.7. Wt. 53, 45.6.

Sizes .65–.6. Wt. 17.2, 12.5 clipped.

(CONSTANTINE XI, no coins known.)

#### BRONZE.

The bronze coinage introduced by Anastasius I remained the model of the Imperial currency till about the time of Constantine IV (died 685).

#### BRONZE COINAGE.

It bore marks of value, an indication of the mint and officina, and (from the twelfth year of Justinian I) the date of issue. The weights of extant specimens vary very greatly, even in the case of coins that bear identical marks of value, yet, when due allowance is made for the exceptional wear and tear which Byzantine bronze coins seem to have undergone, it becomes clear that the weight of the original *flans* was adjusted with considerable care.

The chief denominations are marked **M** (the follis), **K**, **I**, **E**, being pieces of 40, 20, 10, and 5 nummia. These pieces are mainly struck at Constantinople, at the Asiatic mints (Cyzius and Nicomedia), and at Antioch and Carthage. Thessalonica has, to a great extent, denominations of its own. At Alexandria, the usual denomination is **IB**, i.e. 12 nummia.

ANASTASIUS I. The coins marked **M**, **K**, **I**, are struck in two main series: (i) of large module; (ii) of small module. The coins of small module are always lighter than those of the large size, no attempt being made to add to their weight by increasing their thickness. We are thus in presence of a heavy and a light coinage, the latter being about half the weight of the former. This system appears to have been partially continued by Justin I, but not by his successors.

*(Large Module)*

**M** 301.6, 287, 282.6, 278, 276, 260, 252.

**K** 140.5, 133, 124.

**I** 62.2.

*(Small Module)*

**M** 162, 155, 150.6, 143, 121.5, 119.4.

**K** 87.7, 77.8, 70.2, 66.

**I** 38.6, 35.7, 33.

---

**Є** 38.4, 34.2, 30.

## JUSTIN I.

*(Large Module)*

**M** 284.2, 282.2, 275.5 (at Nicomedia not above 269.2).

**K** 139.6, 137.2, 126.7, 118.

*(Small Module)*

(**M** and **K** coins are described by Sabatier of the Constantinople mint.)

---

**I** 85, 76.6, 75.2, 68, 56.6.

**Є** 38.7, 38.5, 36.6.

## JUSTINIAN I.

*(Profile type)*

**M** 278.2, 275.6, 264.8; at Nicomedia, 285.

**K** 148.

**I** 115, 90.3, 83 and lower; 67 at Nicomedia; 94 at Carthage; 64.4 at Ravenna.

**X** 102.4 Carthage; 53 Sicily.

**Є** 52.2, 51.6. Others of 30, &c.

*(Full-face type)*

This type was introduced in A.D. 538/9 (Justinian's twelfth year), and the weight of the coins was increased.

**M** In the earlier years of the issue the weight is almost always above 300 grains (363.8, 339.2, 352). From year 20 (A.D. 546/7) to the end of the reign the weight of 300 grains is hardly ever reached (298.6, 283.2, 281, 264.4, 247.7).

**K** 180.6, 158.7, 149 Constantinople; 174.2 Nicomedia; 176.2 Cyzicus; 98, 76 Thessalonica; 206.3 Carthage.

---

At *Alexandria*, **IB** (12) coins, wt. 84.3;<sup>1</sup> **S** (= 6), wt. 52; and **Γ** (= 3), wt. 32. (cp. p. 62, note 1, *infra*). Also the denomination **ΛΓ** (33 nummia), wt. 223.3 (cp. p. 62, note 1, *infra*).

At *Thessalonica* exceptional denominations occur (cp. p. 43, note, *infra*), as follows:—

**IS** (16), wt. 123.6, 104.

**H** (8), wt. 72.2 (highest).

**Δ** (4), wt. 26.5.

**Γ** (3), wt. 17.2.

**B** (2), wt. 12.

**JUSTIN II.** The coins show a falling off in weight as compared with Justinian's coinage.

**M** 235.5, 243.4 Constantinople; 248.2 Nicomedia.

**K** 128 Constantinople; lighter at Thessalonica; 153.6 Carthage.

**XX** 79.7 Rome.

**I** 46.4 Thessalonica; 77.4 Antioch; 75.6 Carthage.

**X** 83 Carthage; 47 Sicily.

**IB** 79.7 Alexandria.

**TIBERIUS II.**

**M** 277 Constantinople; 260.2 Nicomedia; 242.2 Cyzicus; at Antioch generally below 200 grains, the highest weight being 238.8.

<sup>1</sup> For weights of coins of Alexandria in various reigns, see Kubitschek in *Num. Zeitschrift*, xxix, 1897 (1898), p. 193 f. This piece of '12' was in Egypt reckoned as the *foliis*, *ibid.*, p. 183 f.

XXX, a new denomination (p. 110, *infra*), wt. 199.6.

XX 121.8 Constantinople (p. 110); 133.7 Nicomedia; 102.7 Antioch;  
99.7 Rome.

K 97.4 Thessalonica; 121 Antioch.

X 66 Constantinople (p. 111).

I 55.6 Constantinople; 72.5 Ravenna.

U (5) 42.1 Constantinople.

IB 76.3, 84.4 Alexandria.

MAURICE TIBERIUS.

M Nearly always below 200 grains. The heaviest specimen at Constantinople weighs 205.6; at Nicomedia, 213.6. At Cyzicus only one specimen reaches 200. At Antioch always below 200.

K generally below 100. Highest weight, 109.9.

I 50.4 Constantinople; 51.5 Cyzicus; 56.6 Antioch; 66.4 Sicily.

E 37.1 Constantinople; 36 Carthage.

IB 78.2, 80.5 Alexandria.

XX 125.6 Carthage; 97.1 Rome.

X 67.2 Carthage; 63 Sicily; 36.6 Rome.

V 56.4 Carthage.

At *Cherson* (pp. 158, 159, *infra*), in addition to M and K coins, there are pieces marked H (wt. 190.7, 178.6) and Δ (wt. 101.9). These are respectively pieces of 8 pentanummia (5 nummia × 8 = 40 nummia, i. e. M), and 4 pentanummia (5 nummia × 4 = 20 nummia, i. e. K).

PHOCAS.

M 220.8 Constantinople, year 1. At Antioch, of lower weight (177, 166.5, &c.).

XXXX introduced in year 2. Wt. 195, 194, 192.8, 185.7; at Ravenna, 95.8.

K 99.2, 87.7 both at Thessalonica.

XX 115.8, 111.7 Constantinople. At Thessalonica the rudely-prepared flans weigh less (98.7, &c.). At Antioch, 84.6.

X 50.1, 60 Carthage; 32 Rome.

Ε 27.5 Carthage. U 39.2.

IB 48.7, 41.6 Alexandria.

#### HERACLIUS AND FAMILY.

M The weight of the follis is now considerably lower than in previous reigns (188.2, 168.2, 151, 145), and many of the later specimens in this reign fall below 100 grains. If a high weight occasionally occurs, it is because the coin has been restruck; thus 226 grains, restruck on a coin of Tiberius II; 216.5, restruck on Justin II.

XXXX at Carthage, 251.5 (worn).

Λ (30) a scarce denomination (Constantinople, p. 210, *infra*), 90, restruck on M coin; 74.8 (restruck: cp. Sab., i, p. 68).

K 84.6, 83.7. At Carthage, 96.5, 129.4; at Rome, 99.4.

XX At Carthage, 137.2, 129.6, 86.6; at Rome, 59.9.

X At Carthage, 70, 59, 48.7.

V At Carthage, 29.6.

IB 225 (exceptionally large), 174.6, 144, 121, and lower. Also 55.4 and 51.6 of thinner fabric (Alexandria).

S 82 grs. Another series weighs 50 or less (Alexandria).

*Sicily.* The M coins are those of Anastasius I, Justin I, &c., counter-marked by Heraclius. Also I (10 nummia) 66.7, 63.7.

CONSTANS II. *Constantinople.* The M coins are now small, rudely struck, and frequently restruck. The weight is usually considerably under 100 grains and even under 50. K coins weigh 44 grains and less. *Carthage.* M 113.1. XXXX 130. XX 101.3; usually under 100 grains. X 53.5. *Sicily.* M Small; wt. under 100. I 61.5 and less. *Rome.* XX 79 and less. K about the same weight as XX. X about 20.

CONSTANTINE IV. The M coins are once again of large module (wt. 290, 274.7), but this is because they are, in all probability, coins of the fifth and sixth centuries restruck. K weighs 94.3 and less. I 59.7. XX at Rome, 80.5 and less.

JUSTINIAN II—LEO III. The coinage inaugurated by Anastasius I, disappeared, after many vicissitudes, under Constantine IV. The bronze currency is now represented by a small follis, marked M, without date; even this coin seems almost to be absent (till the time of Constantine V)

from Constantinople, and to be struck only at the less important mints.  
(Justinian II. **M** at Carthage and in Sicily, wt. under 100 grains.  
Tiberius III. **M** at Ravenna, wt. 77.6.)

CONSTANTINE V (A. D. 741-775). **M** The follis (now bearing on the reverse a type in addition to the mark of value **M**) is re-introduced at Constantinople. There is a heavy coinage of this denomination with a maximum weight of about 181 grains, and a light coinage weighing from 80 to 40 or less. The 'Provincial' coins (cp. p. xxxiii, *supra*), which bear no mark of value, weigh from about 40 to 56 grs.

LEO IV. **M** 97.5, 79.5.

CONSTANTINE VI. 56.4, 37.

IRENE. **M** 61.6.

NICEPHORUS I and STAURACIUS. **M** 115. 'Provincial', 61.5.

MICHAEL I and THEOPHYLACT. **M** 89, 75.2. 'Provincial', 29.9.

LEO V. **M** 91.2. 'Provincial', 90.4, but often less.

MICHAEL II. **M** 116.3, 92.3. 'Provincial' under 100 grains.

THEOPHILUS. **M** Constantinople, 116.1, 105. *Without* mark of value (follis), 138, 122.2, all specimens exceeding 100 grains. A smaller denomination weighs 68.1. 'Provincial', **M**, 75.5. *Without* mark of value, 69.8.

MICHAEL III. Follis, 128.7. 'Provincial', 60.6 (**M**); 34 (*without* mark of value).

BASIL I. Follis, 120.4, 121. 'Provincial', 32.8 (*without* mark of value). *Cherson*. 117.1, also 56, and a smaller denomination.

LEO VI. Follis, 135.8, 123.8, 111.2. Another denomination 68. *Cherson*, 48.

CONSTANTINE VII (PERIOD OF). Follis, 164 grains, but generally less (119.8, &c.). *Cherson*, 136.6; another denomination, 65.2.

NICEPHORUS II, PHOCAS. Follis, 113.1. *Cherson*, 60.3.

JOHN I. Follis, 318.6. The restruck pieces weigh much less. *Cherson*, 44.8.

BASIL II and CONSTANTINE VIII. Size 1.35, weighs 256.5; size 1.1, weighs less. *Cherson*, 57.

CONSTANTINE VII. 182.7.

ROMANUS III. 162.4.

MICHAEL IV. 275.2. Mostly restruck.

CONSTANTINE IX. 151.6.

THEODORA. 165.3 and a small denomination. Some restruck.

MICHAEL VI. Chiefly restruck pieces.

ISAAC I. 128, 120.8.

CONSTANTINE X. Chiefly restruck.

ROMANUS IV. 156-5.

MICHAEL VII. 146-8.

NICEPHORUS III. Chiefly restruck.

ALEXIUS I. As in the gold and silver coinage, Alexius introduces changes in the bronze which, more often than not, in the reigns of many of his predecessors had been restruck on old flans. His bronze coins are generally of small module, and weigh 68.5 grains, though often less. There is a smaller denomination weighing about 20.

JOHN II. 78, 67.4. Smaller denomination, 36.3.

MANUEL I. 63.3 and less. (Sizes .85-.6.)

ANDRONICUS I. 69. (Sizes .85-.65.)

ISAAC II. About 81.3 and less. (Sizes .9-.65.)

ALEXIUS III. 56.6, &c. (Sizes .75-.6.)

MICHAEL VIII. 34, 29.4. (Size .85.)

ANDRONICUS II. 48.3 and less. (Sizes .9-.7.)

ANDRONICUS II and III. 40.4.

ANDRONICUS III. 53.4.

MANUEL II. 34.6.

JOHN VIII. Small bronze, 14.4, &c.

The coins, at all periods, consist mainly of copper with an alloy of tin and zinc, and often of lead. Some analyses recorded by Bibra and by Sabatier are brought together by J. Hammer in his article, 'Der Feingehalt der griech. u. röm. Münzen', in *Zeit. für Num.*, 1907, pp. 140, 141.

#### § 4. TYPES, ART, AND PORTRAITURE.

Although most of the interesting types found on Byzantine money have been already referred to as they made their appearance in the reigns noticed in our historical summary (§ 2), it may be convenient here to take a more general survey of the coinage as a whole, with especial reference to its types, art, and portraiture.

Byzantine coinage, as regards type, fabric, and mechanical execution, may be said to have its roots deep in the past. Thus, the gold coins of Anastasius I (A.D. 491-518), the first Emperor dealt with in these volumes, are simple reproductions of those of his predecessor Zeno. Zeno followed the traditions of Arcadius (A.D. 395), the ruler of the Eastern division of the Roman Empire. Arcadius went back to Constantine, and the coinage of Constantine, though in some respects an innovation, can yet be shown to be evolved from that of Augustus, as the money of Augustus can be traced—by a circuitous course—to the model furnished by the portrait-coins of the Greek successors of Alexander.

The Byzantine coinage, therefore, in its choice of types follows the custom of earlier kings and Emperors, that is to say, its types are in the main either Imperial (such as busts or figures of the Emperor and his family), or religious, in the latter case the deities of the classic pantheon being replaced by sacred emblems, by the Saviour and the Virgin, and, in the later periods, by the Saints.

**General character  
of the types.**

Secular types, apart from those of strictly Imperial import, can hardly be said to exist. If the coins of Anastasius and of many of his successors display the conventional figure of Victory, it is yet a Victory whose sceptre is surmounted by the cross or the sacred monogram (Pl. I. 1; Pl. IV. 9); if Michael VIII introduces a topographical type—a view of Constantinople—he at the same time represents its patron and protectress the Blessed Virgin (Pl. LXXIV. 1, 2). Justin II represents the City, or the City-Tyche ‘Constantinople’ (Pl. XI. 1), but she holds the cross-surmounted orb, and even this type is said to have been objected to as pagan, and it was at any rate removed by his successor to make way for the cross.<sup>1</sup>

An exception to the prevailing character of Byzantine coin-types may seem to be found in the great bronze currency instituted by Anastasius I, the chief feature of which is the bold indication, on the reverse, of the value of the coin (**M**; **K**, &c.): even here, however, the cross is usually present, though in a subordinate position.

Coinage, whether in the ancient or modern world, has rarely—except in the case of the Greeks—reached the level of *fine art*, if by fine art we understand (with Ruskin) a product to which the hand, the brain, and the heart have simultaneously contributed. The Byzantine currency as a whole cannot certainly be reckoned among the artistic coinages of the world, yet a close examination of it suggests that it has been (from the artistic standpoint) unduly depreciated.<sup>2</sup> In execution it is often, indeed, either careless or unskilful, and in the choice of types limited in range, yet it is not hard to find individual specimens which have some of the charm of art, and in most periods it may be said to display, if not artistic quality, yet at any rate a certain numismatic propriety. I would instance the typical Byzantine bronze coins where the reverse consists of a large letter, or rather, numeral, which forms a bold and not undecorative device.<sup>3</sup> Such a reverse cannot fairly be compared with reverses that attempt a figure-subject, but, given the commercial necessity of clearly marking each coin with its value, the Byzantine engraver has done well. The same sort of propriety may be found also in those reverses which merely consist of an inscription—in the

**The art of  
Byzantine Coins.**

<sup>1</sup> See the statement of John of Ephesus noticed *supra*, p. xix.

<sup>2</sup> On the influence of Byzantine coins on other coinages, see Keary, *Numismatic Chronicle*, 1886, p. 77 ff.; Macdonald, *Coin Types*, p. 251.

<sup>3</sup> e.g. Pl. II. 3, 4; VI. 9, 10, 11.

bold letters of the coins of John Zimiscees, for instance, with their little ornament above and below the writing (Pl. LV). In the case of the silver coins, again, where the reverse is made up only of an inscription, a not inelegant finish is provided by the triple border (e.g. Pl. LIII and Pl. LIV).

We shall probably be able to make a more satisfactory survey of the varied details of types and portraiture if we divide the whole Byzantine coinage into some six or seven periods, fixed, partly by historical considerations, partly by observing important changes in the coins themselves.

PERIOD I. Anastasius I—Constantine IV (A.D. 491–685).

PERIOD II. Justinian II—Theodosius III (A.D. 685–717).

PERIOD III. Leo III—Theophilus (A.D. 717–842).

PERIOD IV. Michael III—John I (A.D. 842–976).

PERIOD V. Basil II and Constantine VIII—Nicephorus III (A.D. 976–1081).

PERIOD VI. Alexius I—Alexius IV (A.D. 1081–1204).

PERIOD VII. Michael VIII, Palaeologus—Fall of Constantinople (A.D. 1261–1453).

PERIOD I. Anastasius I—Constantine IV (A.D. 491–685).

In the annals of the coinage, this period is remarkable for the number of mints that were in operation, and for the abundant issues of bronze money.

The reverses of the bronze coins consist, as already remarked, of a conspicuous numeral indicating the mark of value. The reverses of the gold coins do not, at first, diverge much from the models furnished by the predecessors of Anastasius I, and Victory remains the stock type. Justin II introduces 'Constantinople' on his gold (Pl. XI. 1), for which his successor Tiberius II substitutes the cross—a cross potent, on steps. Maurice Tiberius restored the Victory, but the cross potent was once more adopted by Heraclius, and proved to be one of the longest-lived of Byzantine coin-devices.

Next with regard to the representations of the Emperor seen on the obverse.<sup>1</sup> At first, the coins display the fully armed helmeted bust that had been familiar on Imperial coins since the reign of Arcadius. A bust in *consular* dress was introduced by Tiberius II and occurs at intervals in later periods of Byzantine coinage. The full-length figure also occasionally occurs in this period.

**Obverse-types and representations of Imperial persons.**

<sup>1</sup> The Emperor rarely occupies the reverse, but see Pl. III. 1, *Gloria Romanorum*, and the equestrian figure of Justinian I on the large gold medallion, *frontispiece*, vol. i.

The Empress does not appear—even Theodora is not an exception—till the reign of Justin II, when Sophia is represented enthroned beside her husband. Similar representations, seated or standing, which were probably suggested by statues, are found in the case of Anastasia the wife of Tiberius II, and of Leontia the wife of Phocas.

Maurice Tiberius (on the coins of Cherson) represents his son as well as his wife (Pl. XIX. 22–23; Pl. XX. 1), and Heraclius establishes the practice, followed down to the latest periods of coinage, of representing two or more members of the Imperial family in addition to himself. Such representations, though often extremely quaint and, apparently, conventional (cp. Pl. XXIII. 10–12; Pl. XXXI. 1, 2; Pl. XXXVII. 9), are pleasing to look upon, as are all family groups in which the young are mingled with their elders. (Cp. the pleasing heads of Heraclius and his son, Pl. XXIII. 5; cp. also Pl. XXXIII. 8 and 10.)

The Imperial busts and figures of the coins are not merely valuable for details of costume, but are—or may be presumed to be—interesting for their portraiture. But before noticing these portraits one by one, it may be well to say a few words as to the conditions under which they can be profitably studied.

**Portraiture on  
Byzantine Coins.**

Nearly all extensive coinages—those of France and England, for example—which both precede and follow the Renaissance period, present us with regal portraits of two kinds—the conventional portrait and the characterized portrait. We determine a portrait to be conventional when it appears on the coins of several different monarchs unchanged, except, perhaps, in small details of coiffure or head-dress. Such a portrait is the youthful head which on our English coinage does duty for the early Edwards and Henries. When, on the other hand, each ruler—as, in our own coinage, first Henry VII, then Henry VIII—is distinctly differentiated by the engraver, we have the characterized portrait. Unfortunately, such a portrait is not necessarily characteristic or true to the original, and we can only decide whether the characterized portrait is faithful or otherwise by comparing it with other contemporary portraits, preferably those by a painter or sculptor, whose work belongs to a higher sphere of art and who is free from the trammels and limitations of the craftsman of the mint.

But in the Byzantine series it is not often that we can confront a coin-portrait with a contemporary portrait found elsewhere. Even when this is possible (as when we compare the Justinian of coins with the Justinian of the Ravenna mosaics) the trustworthiness of the non-numismatic monument may itself be open to question. The small scale on which the Imperial heads are reproduced on coins is one obstacle, in the case of not very skilful engravers, in the way of attaining life-like portraiture. Again, the mechanical rendering of the eye by a mere globule

or pellet constantly interferes with the likeness. We may see this by comparing the heads of certain Emperors found on coins with those that appear in the miniatures of the Zonaras MS. referred to in detail later on (p. xcvi, *infra*). Coin and miniature often agree as to the contour of the face and the treatment of the beard, but the coin makes no attempt, as the miniature does, to represent the eye with truth to nature. The task of discriminating between the characterized portrait and the portrait that is not only characterized but also faithful thus becomes a delicate one, and in many cases appears to be hopeless.

In studying Byzantine coin-portraits, then, the first step is to rule out of court all representations that can be demonstrated to be conventional. Thus, it is quite certain that the beardless profile-head that is invariably found on the *semisses* and *tremisses* is conventional, because it subsists unchanged through several centuries, and in each reign accompanies *solidi* which bear a totally different Imperial image.<sup>1</sup> Commercial reasons—such as the popularity of these small denominations of the gold currency with barbarians and foreigners—probably led to the retention of the purely conventional effigy. Again, there are certain whole periods during which the same, or nearly the same, portrait is served up as the representation of different Emperors; such conventional representations occur, for instance, in our second Period.

Turning to the portraits of the present period we find that the representation of the first Emperor, Anastasius I (Pl. I. 1), is undoubtedly conventional, for it is a beardless, armed bust resembling the busts of his predecessors. The same view must be taken of the similar bust of Justin I (Pl. II. 10).<sup>2</sup>

Passing over, for the moment, the representations of the great Justinian, we reach the reigns of Justin II, Tiberius II, and Maurice Tiberius. The busts of these Emperors, though differing in some details (e.g. Tiberius II introduces the consular costume, Pl. XIV. 5), resemble in essentials not only one another but also the head of Justinian (Pl. IV. 12). We cannot therefore regard them as true portraits; for if the head of Justinian is decided to be conventional, then these heads are clearly in the same case; if, on the contrary, the Justinian head is a true portrait, then these heads merely reproduce the features of Justinian without material modification.

The next Emperor, Phocas, presents a characterized portrait, and

<sup>1</sup> In some cases, e.g. Pl. XXXI. 4, 6; Pl. XXXIII. 11-14, it might be thought that the *semisses* and *tremisses* bear a true, or at least a characterized, portrait. But the examination of a number of specimens will prove that it is merely the same youthful bust barbarously rendered.

<sup>2</sup> Equally conventional are the beardless heads *in profile* found chiefly on the bronze coins of Anastasius I and Justin I, and in the first coinage of Justinian I. They are to be classed with the conventional beardless heads found on the *semisses* and *tremisses*.

wears a short pointed beard (Pl. XX. 4, 5, 12; Pl. XXII. 16, profile, bearded). Having in view the fact that this portrait differs markedly from the conventional heads of his three predecessors, we may, I think, venture to regard it as a true likeness. A similar head is repeated on the seals of this Emperor.<sup>1</sup>

Of Heraclius, four representations are found:—

1. With pointed beard. Pl. XXIII. 1.
2. With short beard and helmet. Pl. XXIII. 2, 3.
3. With short beard and crown. Pl. XXIII. 4–8; Pl. XXVIII. 3, 4.<sup>2</sup>
4. With long beard. Pl. XXIII. 9.

No. 1 (Pl. XXIII. 1) is, as I have already pointed out (p. xxiii, *supra*), simply a repetition of the portrait of Phocas (Pl. XX. 4), made probably before the engraver to the mint had been able to obtain a ‘sitting’ from the new Emperor. No. 2 (Pl. XXIII. 2, 3) represents Heraclius with a close beard, not pointed. It is a characterized portrait, but not one to be depended on as a likeness. It is really the conventional head of Tiberius II or Maurice Tiberius, with the addition of a fringe of beard: the eyes, too, are clumsily represented by prominent pellets, as they were, indeed, in the case of Phocas.

The portrait No. 3 (Pl. XXIII. 4–8; XXVIII. 3, 4) has a better claim to be accepted as a likeness of Heraclius.<sup>3</sup> In the case of the coin figured Pl. XXIII. 7, an engraver of more than ordinary skill was evidently at work, and other coins, though less carefully executed (e.g. Pl. XXIII. 4; XXVIII. 4) present a portrait which does not materially differ from the model of Pl. XXIII. 7.

The last portrait, No. 4 (Pl. XXIII. 9; cp. XXIII. 11), may readily be held to furnish evidence that Heraclius in the latter part of his reign grew a beard of portentous length and a moustache in accordance, but, probably, it does not well reproduce the features of the Emperor, for the eye is strangely represented by a ring with the centre hollowed out.<sup>4</sup>

Constans II, son of Heraclius Constantine, and grandson of the Emperor Heraclius, is represented by three portraits:—

1. Beardless head. Pl. XXX. 12, 13.
2. Short beard. Pl. XXX. 14, 15.
3. Long beard. Pl. XXX. 16–21.

<sup>1</sup> See *supra*, pp. xxii, xxiii, and the description of Cedrenus there referred to.

<sup>2</sup> On the delicately executed gold coins of Carthage, Pl. XXVII. 11, 12, Heraclius wears a milder aspect than on the coins of Constantinople, and the beard is more pointed. The bronze coin of Carthage, Pl. XXVII. 21, has, however, the portrait of the Constantinopolitan coins.

<sup>3</sup> On the personal appearance of Heraclius, see the description of Cedrenus, cited p. xxiv, *supra*.

<sup>4</sup> This way of representing the eyes is found on some coins with portrait No. 3, e.g. Pl. XXIII. 4, which may be contrasted with Pl. XXIII. 7.

The coins on which these portraits occur were issued, so far as can be made out (see *infra*, p. 255 n.), at three periods, when Constans was about eleven, sixteen, and twenty-one, but none of the portraits tally well with the age of the issuer. It must be said, however, that No. 2 (Pl. XXX. 14), with its long-drawn visage, recalls the portrait of Heraclius Constantine (father of Constans), as seen in Pl. XXIII. 9, and has so far a claim to be considered life-like. On the other hand, No. 3 is a slavish reproduction of the long-bearded head of Heraclius; cp. Pl. XXX. 17 with Pl. XXIII. 9.

Constantine IV, son of Constans II, has a bust strongly characterized, in so far as it is almost invariably that of a warrior in panoply; but whether the portrait is a faithful one seems open to question, for the general idea of the armed bust has evidently been suggested by, and copied from, much earlier coins, probably those of the first issue of Justinian I. Further, in the case of many representations, such as Pl. XXXVII. 10-12, we are precluded from relying on the portraiture, owing to the mechanical rendering of the eyes by hollowed-out circles.

We have still to notice the portrait of Justinian I.  
**Portraiture of Justinian I.** The material for a discussion of the subject is mainly as follows<sup>1</sup>:—

1. Solidus, *three-quarter face*, circ. A. D. 527 (Pl. IV. 9, 10).
2. Solidus and bronze coins, *full-face*, A. D. 538 and later (Pl. IV. 11, 12; VII. 1, 3; VIII. 4, &c.); cp. gold medallion, A. D. 534? *frontispiece* to vol. i, and p. 25.
3. Bronze coins struck at Rome (by the Ostrogoths, or by Justinian?) with *profile* head of Justinian (Pinder and Friedlaender, *Die Münzen Justinians*, Pl. V. 3).
4. Barberini ivory (Louvre) with equestrian figure (Schlumberger, in *Monuments Piot*, vol. vii, p. 79, Pl. X; Diehl, *Justinien*, *frontispiece*).
5. Mosaic, S. Vitale, Ravenna (Diehl, *Justinien*, pp. 15, 16; Venturi, *Storia dell' arte ital.*, i, pp. 130, 131).
6. Mosaic, S. Apollinare nuovo, Ravenna (Diehl, *Justinien*, p. 13).
7. Equestrian statue of Justinian in the Augustaion of Constantinople, known from the description in Procopius, *De Aedif.*, i. 2, and from a drawing reproduced in Diehl, *Justinien*, p. 27; cp. p. 77.
8. Silver disk found at Kertch (Diehl, *op. cit.*, p. 30; cp. Dalton, *B. M. Cat. Christian Antiq.*, No. 543).

No. 1, the three-quarter face solidus (Pl. IV. 9, 10) struck at the beginning of Justinian's reign, A. D. 527, is certainly to be set aside as a conventional portrait, for both in pose and features it resembles the heads on the solidi of his predecessors.

<sup>1</sup> Cp. Diehl, *Justinien*, pp. 14-16; W. G. Holmes, *Age of Justinian*, ii, p. 365 n.

In A.D. 538 Justinian made certain changes in the coinage: he caused the bronze money to be inscribed with the year of issue, and placed a new bust of himself both on the gold and bronze currency. This bust differs in features from the preceding bust, and is shown full-face, and not three-quarter face, or in profile, as on earlier coins (Pl. IV. 11, 12; VII. 1, 3; VIII. 4, &c.). It must be borne in mind that this head was never again changed throughout Justinian's long reign, and is therefore evidence only for the year 538 and thereabouts.<sup>1</sup> It is a beardless visage, plump, rounded, and not without a smile. It so far agrees with the contemporary description of Procopius, who says (*Hist. arc.*, viii. 4) that Justinian had a round face, a ruddy complexion, not ill to look upon, and that he was a man of medium height, with a body neither thin nor corpulent. Procopius (op. cit., viii. 4-6) was struck by his resemblance to representations which he had seen of the Emperor Domitian. No. 6 in our list, the mosaic portrait of Justinian in S. Apollinare nuovo, presents a head which is of the same character as these coins of A.D. 538; but the mosaic was made about A.D. 557, and represents a much older man, who has been sorely buffeted in the storms of life. Another portrait of the same character, but evidencing more skilful and delicate treatment, is to be found in the horseman of the Barberini ivory (No. 4).<sup>2</sup>

In contrast with the above-mentioned portraits must be set the figure of Justinian seen in the deeply impressive groups of San Vitale (A.D. 547). Here the Emperor has an oval rather than a rounded face, and he wears a moustache. John Malalas (p. 425) vouches for the existence of a moustache, and perhaps the Emperor adopted this fashion for a time, subsequent to the issue of the coin-portrait of 538. I am not sure, however, that we can rely on this San Vitale representation. The black, staring eyes, for instance, seen in the case of Justinian as well as of Theodora and the courtiers that surround them, are, one may suspect, not necessarily true to life, but due partly to convention and to the difficulty of manipulating mosaic cubes for the purposes of portraiture.

No. 8 (if really of Justinian) and No. 7 (the figure in the Augustaion) add nothing very important to the evidence. They are both beardless figures, and No. 7 wears the plumed head-dress found also on the gold medallion (*frontispiece*, vol. i).

One representation, No. 3, remains. It is the coin of Rome (whether Ostrogothic or an actual issue of Justinian's<sup>3</sup>), and is interesting from

<sup>1</sup> If the gold medallion of Justinian (*frontispiece*, vol. i; p. 25) is rightly assigned to A.D. 534, he had already attempted a characterized portrait some years before it was introduced on the ordinary currency.

<sup>2</sup> This figure is, however, believed by Strzygowski (*Der Dom zu Aachen*, p. 49; cp. Mrs. A. Strong, *Roman Sculpture* (1907), pp. 344-346) to represent Constantine the Great.

<sup>3</sup> It much resembles in treatment the head of the Ostrogothic ruler Theodahat (A.D. 534-536) figured in Keary, *Coinages of Western Europe*, Pl. VII (II), No. 18;

its skilful execution and because it shows the head in profile. The hair is cut straight over the forehead, and the whole head reminds one of a Roman Emperor of about the end of the first century A. D., rather, however, of Trajan than of Domitian, the Emperor to whom, according to Procopius, Justinian bore the most resemblance.

On the whole, it may be said that, if we were preparing a 'composite photograph' of Justinian, we should find the best material in the coin-portraits of 538 (and the gold medallion of 534?), in the Roman coin (No. 3), the mosaic of San Apollinare, and perhaps in the Barberini ivory.

Regarding Period I as a whole, it may be remarked that the coinage—so far as the reverse-types are concerned—displays little originality or artistic feeling. The portraits of the early Emperors (with the probable exception of Justinian) are conventional, but from Phocas to Constantine IV portraits occur which have a claim, in varying degrees, to be accepted as genuine likenesses.

#### Characteristics of Period I.

The gold coinage issued before the reign of Heraclius is carelessly struck<sup>1</sup>; but under Heraclius and his successors it is better engraved and more neatly turned out. Greater care is generally bestowed on the bronze coinage which, however, begins to deteriorate after Heraclius. The custom of restriking or countermarking old *flans* largely prevails after the time of Justinian I.

#### PERIOD II. Justinian II—Theodosius III (A.D. 685–717).

This period is marked by the disappearance of several of the older Imperial mints and by the diminishing importance of the bronze coinage. It is noticeable, from the point of view of types, for the first appearance of the image of Christ on Byzantine coins. This sacred type occurs both in the first and second reigns of Justinian II—the *Servus Christi*: other Emperors employ the cross for their reverse-types.

The image of the Saviour consists of a bust with the cross placed behind the head, which is not nimbate. There are two representations—one, a head with hair and beard flowing, a work of some artistic feeling

Friedlaender's *Münzen der Ostgothen*, Pl. II. 4; Sabatier, Pl. XVIII. 24, 25.—Cp. also the standing figure holding Victory in the Barberini ivory above-mentioned.

<sup>1</sup> The careless execution of the gold coins—even in the reign of Justinian—is, perhaps, to be accounted for by supposing that money in this metal was chiefly struck, and on a large scale, for the purpose of paying tributes and taxes (cp. Keary, *Coinages of Western Europe*, p. 24), and was therefore coined rapidly and without much regard to the requirements of artistic, or even of Imperial, dignity. Extant Byzantine coins struck in gold are (as is well known to collectors) generally remarkable for their good preservation. On the other hand, the bronze and silver coins, the part of the currency which bore the brunt of everyday transactions, more often than not display lamentable evidence of wear and tear.

(Pl. XXXVIII. 15, 16, 24); the other, a more crudely treated head, of strange facial contours, with the hair curly, the beard cut close (Pl. XXXVIII. 17, 22, 25; Pl. XXXIX. 20; Pl. XLI. 1-5).

The attempts at portraiture which we discovered in certain reigns of Period I are now abandoned, and the heads become entirely conventional. The engraver outlines the face as if it were a sort of inverted omphalos; he surrounds it with a hardly discernible fringe representing whiskers and beard, while another straight-cut fringe of hair is made to run across the brow.

The general execution of the coinage (always excepting, in this Period and later, the rude 'Provincial' and 'Italian' coinages, some of which may not be Imperial) is neat, and, but for the conventionality of the portraiture, would do credit to the Imperial mint. The best specimens are such as Pl. XXXVIII. 13, and 15 where Justinian II stands holding the cross potent; Pl. XXXIX. 4; Pl. XLI. 11, of Philippicus.

#### PERIOD III. Leo III—Theophilus (A.D. 717-842).

This is the period of the great iconoclastic movement. The head of the Saviour (first introduced by Justinian II) is no longer represented, but the reverse-type consists only of the cross,<sup>1</sup> or, more often, of the bust of some member of the Imperial family.<sup>2</sup>

Constantine V, in introducing a new silver coin, entirely filled the reverse-space with an inscription, and placed the cross on the obverse; and this arrangement was repeated in many later reigns. The triple or double border which surrounds each side imparts some finish to an otherwise plain coin.

On the coinage as a whole the types are practically confined to the representation of the cross and the Imperial family. Human portraiture fares, in a way, hardly better than the sacred image. It is throughout conventional, the face being represented in the manner described in Period II: see e.g. Pl. XLIII. 22, 23; XLVI. 15; XLVIII. 14, Theophilus, his wife and three daughters. Though two rulers of this period, Irene and Michael I, were image-worshippers they made no change in the coinage of their iconoclastic predecessors, and their portraits were not more life-like; thus (except by the head-dress) the head of Irene is hardly to be distinguished from that of her son Constantine VI: see Pl. XLVI. 5, 6, 9, 10, 11.

The only exception to the conventionality of the portraits is to be found at the beginning of this period in the case of Leo III, whose head

<sup>1</sup> The cross *potent*. Theophilus, Pl. XLVIII. 15, first introduces the *patriarchal* cross.

<sup>2</sup> As to the influence of the iconoclastic movement on the coins, see further, pp. xxxv, xxxvi, *supra*.

as shown in Pl. XLII. 7, 8 is strongly characterized and may well be a likeness. But even Leo is, after the first part of his reign, represented by a conventional head: see Pl. XLII. 9, 10, &c.

PERIOD IV. Michael III—John I (A. D. 842–976).

The beginning of this period is marked by the close of the long iconoclastic controversy and the revival of image-worship by Theodora the regent-mother of Michael III. The change is evidenced in the new life and artistic vigour imparted to the coinage, and it may be noted that the quasi-barbarous 'Provincial' currency comes to an end in the earlier part of this period.<sup>1</sup>

A succession of new reverse-types now appears. Michael III restores the head of the Saviour, and his successor Basil I represents the Saviour enthroned. Leo VI introduces the image of the Virgin; Constantine VII represents the Saviour in the act of crowning the Emperor; Alexander for the first time places a head of a Saint on the coins. John I (at the end of the period) takes a step in the same direction in connexion with the bronze coinage, which in his reign and long afterwards was made to display only religious types and inscriptions,<sup>2</sup> while 'the things of Caesar'—the 'image' and the 'superscription'—were surrendered and excluded.

With regard to the types relating to the Saviour and the Virgin, the head of Christ re-introduced by Michael III (Pl. XLIX. 16, 17) is copied, as can hardly be doubted, from the coins of Justinian II (A. D. 685–695), reproducing, however, the head with flowing hair (Pl. XXXVIII. 15, 16) and not the bizarre image (Pl. XXXVIII. 17) with the close beard. The heads of Christ, found later, in the reigns of Constantine VII and of Nicephorus II Phocas, are rendered with delicacy and artistic feeling: see especially Pl. LIII. 7, 12–14; LIV. 4, 5; and cp. coins of John I, Pl. LIV. and LV. In contrast with this, the seated figure of Christ introduced by Basil I and destined to become stereotyped on the coinage has not any special merit either in pose or expression (Pl. L. 11, 12).

The Virgin-type introduced by Leo VI is a bust or half-length figure *orans* (Pl. LI. 8). It is treated with grace and freshness, and, though often repeated in later reigns, never, perhaps, quite loses its charm.<sup>3</sup>

Under Nicephorus II Phocas, the Virgin (a half-length figure) is shown beside the Emperor (Pl. LIV. 5) in the place previously filled by emperors' wives or sons. In the next reign (John I) she is seen crowning the Emperor (Pl. LIV. 10–12). The Virgin with the medallion of the

<sup>1</sup> Under Basil I. The 'Italian' coinage had ceased in the reign of Theophilus.

<sup>2</sup> See *supra*, p. li.

<sup>3</sup> On the *orans* type, see Bauer and Strzygowski, 'Eine alexandrinische Weltchronik.' pp. 155–158 in *Denkschriften der kais. Akad. der Wissensch. Wien*, 1906, Bd. 51; L. von Sybel, *Christliche Antike I* (1906), p. 261; Kaufmann, *Handbuch der christl. Arch.* (1905), p. 412. Cp. W. E. Crum, *P. S. Bib. Arch.*, xxi. 251. Further reff. *infra*, p. 502.

infant Christ, though a subject old in art,<sup>1</sup> is not seen on the coins till the reign of John I (Pl. LIV. 14).

In the manipulation of the Imperial busts and figures we may discern an advance on the previous (iconoclastic) period—more variety of pose, and a richer and more decorative treatment of the costume. None the less, the conventional, uncharacterized head still continues to be prominent, and the contour of the face which we noticed in Period II as resembling an inverted omphalos now recalls an inverted triangle. But in addition to these conventional heads we often find, and on the coins of a single Emperor, a strongly characterized bearded type.

Michael III and his family and Basil I do not really break away from the iconoclastic tradition in the matter of portraiture, but Leo VI (side by side with a purely conventional head, Pl. LI. 13, &c.) presents on the gold coin of Pl. LI. 8 a fine bearded head, which we might without difficulty believe to be a genuine portrait were it not that its issue probably took place when Leo was only twenty.<sup>2</sup>

A similar long-bearded head, engraved with gem-like delicacy, appears also on some coins (Pl. LIII. 7) of the art-loving Constantine VII (Porphyrogenitus), but from its close resemblance to the above-mentioned portrait of Leo VI we must doubt whether it is true to life. There are, further, three heads with shorter beards which appear on the coins, respectively, of Romanus I (Pl. LII. 9–11), Nicephorus II Phocas (Pl. LIV. 5–7), and John I (Pl. LIV. 10–13). Each of these heads taken separately might well be deemed an authentic portrait, but when we compare the three together their resemblance becomes so obvious that it is almost certain that two, at any rate, of the heads (Nicephorus II and John I) cannot be the *vera imago* of the Emperors they pretend to represent.

With regard to the general characteristics of this period, it may be remarked that the best executed and best designed of the coins contrast favourably with the angular and arid work of the iconoclastic period, and many specimens prove that the engraver had a good notion of filling a coin-space in a decorative and not inelegant way (see e.g. Pl. LI. 9; LIV. 4, 5, 10, 13). The present period, and the next (Period V) may, indeed, almost be looked upon as the Golden Age of Byzantine coin-art, especially when we compare them with the periods that preceded and followed.

#### PERIOD V. Basil II and Constantine VIII—Nicephorus III (A. D. 976–1081).

This period is transitional between Periods IV and VI. It witnesses the introduction of the scyphate fabric for the nomisma (a fabric finally

<sup>1</sup> See text, *infra*, p. 476, No. 7.

<sup>2</sup> Cp. p. 449, *infra*, as to the date of this coin of Pl. LI. 8.

adopted in Period VI by Alexius I), and, at the same time, the retention of the old solidus or nomisma of small module. The difficulty of filling the comparatively broad 'field' of the new scyphate pieces was ingeniously overcome by placing a triple border on each side of the coin (e.g. Pl. LVI. 8). The Imperial busts could now be represented on a rather larger scale, and the rich jewelled details of Imperial costume were fully displayed (e.g. Pl. LVIII. 2, 10; LX. 3).

During the greater part of this period the coins (with certain exceptions) present the neat, decorative appearance that we found in Period IV (e.g. Pl. LVI. 6, 7, 9-11). There is considerable variety and, at times, artistic merit in the types employed, e.g. the Virgin crowning Romanus III (Pl. LVII. 13); the Virgin *orans* (Pl. LIX. 3); the Christ of Chalce (Pl. LX. 4, 6, 7); standing figures of Emperors, as Isaac I with his drawn sword (Pl. LX. 12); and the beautiful design of the Virgin and Child in Pl. LXII. 2.

The busts and figures of Emperors are represented with considerable care, variety of treatment, and attention to detail, but in the majority of cases it is certain, or may be strongly suspected, that the portraiture is not true to life.

In the two latest reigns of this period, those of Michael VII and Nicephorus III, instances of feeble engraving and careless striking sufficiently indicate that the decadence of Byzantine coin-art has already begun.<sup>1</sup>

<sup>1</sup> Further details of this period may be noted as follows:—

*Basil II and Constantine VIII.* The two portraits Pl. LVI. 1 are clearly conventional, but the bearded head of Basil, Pl. LVI. 2, 3, 8, &c., is at least a more characterized representation. No. 3 on this plate bears some resemblance to the head of Basil II as it appears in the Venice Psalter (see *supra*, p. lii), but when we confront it, as well as Nos. 2 and 8, with the coins of the preceding Emperors John I and Nicephorus II Phocas, it becomes hardly doubtful that we are dealing with a stereotyped bearded representation and not with an exact portrait.

*Constantine VIII.* In his sole reign, presents the bearded heads seen in Pl. LVII. 6-10. Of these, the heads Nos. 6-8 recall (perhaps too vividly to be independent likenesses) the heads of Leo VI (Pl. LI. 8) or Constantine VII (Pl. LIII. 7); Nos. 9, 10 have a portrait of a somewhat different character.

*Romanus III* has an *obr.* of elegant design—the Virgin (his special patron) placing the crown on his head (Pl. LVII. 13). Cp. Schlumberger, *L'Épop. byz.*, iii, p. 532.

*Michael IV.* His head, as represented in Pl. LVIII. 1, 2, has certainly distinctive features, and, so far, might be a portrait. (Cp. the portrait in the Zonaras MS. at Modena; Schlumberger, *op. cit.*, p. 533, which is like the Zonaras Romanus III.)

*Michael V.* The head of this standing figure (Pl. LVIII. 5) may be compared with his head in the Zonaras MS. (Schlumberger, *op. cit.*, iii, p. 532). The form of the face, beard and moustache are practically the same, but the eyes on the coins are clumsily represented by two pellets.

*Constantine IX.* This portrait (Pl. LVIII. 6-12) seems to be suggested by the coins of Michael IV, and can hardly, therefore, be regarded as trustworthy. In some respects, however, it resembles the head of this Emperor in the Zonaras MS. (Schlumberger, *op. cit.*, iii, 540). The beautiful figure of the Virgin *orans*, Pl. LIX. 3, is to be noted.

## PERIOD VI. Alexius I—Alexius IV (A. D. 1081–1204).

With the accession of Alexius I the very distinctive Byzantine coinage of which the scyphate nomisma is the chief feature, may be said to have been completely established. The old solidus or nomisma of thick fabric had already disappeared from the currency.

In respect to mechanical execution there is a decided change for the worse. Cases of double-striking, due to the shifting of the dies, seem almost to have been the rule and not the exception at the Imperial mint, and it is on the reverse side—the side bearing the sacred image—that the most flagrant instances of such carelessness occur: see e. g. Pl. LXVII. 8. Details of costume, moreover, are less delicately treated than in Period V, and the figures have either a bizarre appearance (as Pl. LXIV. 3, *obv.*), or are so stiff and wooden as almost to recall a primitive age of *xoana* (Pl. LXVIII. 9; LXV. 14). In particular, the seated figure of Christ (Pl. LXVII) and the seated figure of the Virgin (Pl. LXX) are usually most clumsily rendered. The beardless bust of Christ (Emmanuel) (Pl. LXVIII. 15; LXIX. 1, 2) is something of a variation from the usual type of the Saviour found on the coins, but it is of small artistic merit. The introduction of saints on the coinage of this period lends it some little interest and variety.<sup>1</sup>

But although throughout this period the number of types is exceptionally large, there is little real invention or free play of the artistic spirit, and the varieties of type are chiefly brought about by presenting sometimes the Christ, sometimes the Virgin—seated or standing, as a bust or a whole length, in the attitude of prayer or of blessing.

*Theodora.* The coins are very delicately executed. Her bust and figure (Pl. LX. 1–3) are shown richly attired, but the features seem little characterized, an observation that is true also of her portrait in the Zonaras MS. (Schlumberger, *L'Épop. byz.*, iii, 541). The Christ of Chalce (cp. p. lvi, *supra*) appears on her coins.

*Michael VI—Isaac I—Constantine X.* On the coins of these reigns, the Emperor is generally represented as a standing figure, and the details of portraiture cannot be well made out. Isaac I holds the drawn sword referred to p. lvii, *supra*.

*Romanus IV.* The portrait (Pl. LXI. 13; LXII. 1) is on a small scale, but resembles the Zonaras miniature of Romanus III: Schlumberger, *op. cit.*, p. 532, so that some doubt may be felt as to whether the portrait of Romanus IV is taken from life. Several interesting types occur:—The family groups of Pl. LXI. 11, 12, in which the Emperor and Empress are crowned by the Saviour, a type known also from the ivory in the Bibliothèque Nationale, Paris (see p. lviii, *supra*); the bust of the Virgin with the medallion (Pl. LXI. 13, 14; LXII. 1), a type now revived after a long interval; and the beautiful figure of the Virgin and Child in Pl. LXII. 2 (see further, p. lix, *supra*).

*Michael VII—Nicephorus III.* Michael is represented by a sturdy bust with features that resemble his predecessors. Nicephorus closely resembles Michael and neither portrait can be relied on as faithful.

<sup>1</sup> John II (successor of Alexius I) introduces St. George; Manuel I introduces St. Theodore and St. Demetrius. The only Saint seen on coins before the reign of John II is St. Alexander, on the coins of his namesake Alexander, A. D. 912–913.

## PERIOD VII. Michael VIII—Fall of Constantinople (A. D. 1261–1453).

The types of this period, which begins with the restoration of the Greek Emperors, arrest the attention by reason of the curiously crowded grouping of the Imperial figures; e.g. the kneeling Michael VIII, Christ and St. Michael in Pl. LXXIV; the grovelling figure of Andronicus II (Pl. LXXIV; cp. LXXV. 1, 2).<sup>1</sup> Of the types new to Byzantine coinage, the most remarkable are the representation of a seraph (Pl. LXXV. 10)<sup>2</sup> and the view of Constantinople (Pl. LXXIV. 1).<sup>3</sup>

Under the Palaeologi of the fourteenth century there was a sort of Renaissance in mosaic and some other branches of art,<sup>4</sup> but the general execution of the coins, especially of the nomisma, is extremely rough, and proves that a very low standard of mechanical skill and care existed during this period at the Imperial mint. There was, however, a counter-acting Western influence at work which tended to alter, and in some cases to improve, the appearance of the currency. This influence came chiefly from Venice, and is visible in the direct copying of Venetian coins (both fabric and types: see Pl. LXXV. 17), in the employment of a new form of the cross (Pl. LXXV. 7), and in the disposition of the inscription in a circular arrangement (Pl. LXXV. 16).

In the period of John V, Byzantine coinage apparently almost ceased to be issued, and its place was probably taken by the money of Venice. Manuel II, followed by John VIII, made evident efforts to restore the currency, and his silver coins (still fairly abundant), though not skilfully engraved, show a certain attempt at decorative effect (Pl. LXXVI. 9–13). In these coinages, Western influence is again traceable, and the latest specimens of the coin-art of Constantinople may be pronounced 'Mediaeval' rather than 'Byzantine' in character.

With regard to portraiture, some attempts at characterization appear to have been made, but they are of little importance owing to clumsy execution or to smallness of scale. In the case of John VIII it is possible that we may have a portrait, and his coins can be compared with the portrait-medal by Vittore Pisano figured as the *frontispiece* to vol. ii.<sup>5</sup>

<sup>1</sup> And see further on this type, p. lxx, *supra*.

<sup>2</sup> With the representation in Pl. LXXV. 10 compare the angels represented in a Vatican MS. of the eleventh century, photographed in Bertaux, *L'Art dans l'Italie mérid.*, Pl. XII. The archangel Michael had already appeared in the eleventh century on a coin of Michael VI (p. 509, *infra*).

<sup>3</sup> See further on this type, p. lxix, *supra*.

<sup>4</sup> Diehl, *Études byz.*, p. 431.

<sup>5</sup> See further on this portrait, p. lxxii, *supra*.

§ 5. IMPERIAL MINTS.

In the reign of Anastasius I three mints only, Constantinople, Nicomedia, and Antioch, were in operation. Under Justin I, Thessalonica and Cyzicus were added. The conquests of Justinian necessitated the establishment of new centres of coinage, and eleven or twelve mints were at work during his reign. Under his three immediate successors the number of mint-places remains nearly the same. Heraclius coins at twelve mints. In the reign of Constans II (the successor of Heraclius) the number of mint-places does not exceed five or six, and from about the time of Nicephorus I (A. D. 802) to the reign of Basil II and Constantine VIII, only two or three mints (so far as is known) continued in operation. From the sole reign of Constantine VIII (A. D. 1025) onwards, all coins seem to have emanated from the Capital.

CONSTANTINOPLE (A. D. 491—*circ.* 1448). The chief mint for coins in all metals. CONSTANTINOPLE.

*Mint-name.* (i) CONOB (on the gold coins till the time of Leo III). (ii) CONOS, COB (on the earlier silver). (iii) CON (on the earlier bronze coinage).

CONOB (found also on the gold of Carthage, Rome and Ravenna) is now generally admitted to consist of the mint-name with the addition of OB, an abbreviation of *obryzum*, 'refined gold'.<sup>1</sup> In CONOS, S, if not a blunder for B, must be an abbreviation mark. COB is perhaps C (the name of Constantinople) and OB(ryzum). (For the occurrence of OB on *bronze* and *silver* coins, see *infra*, under 'Thessalonica').

*Officina marks.* On the solidi from Anastasius I to Justinian II numerals occur with great regularity, ranging from A to I (i. e. 1 to 10). After that time they are more sporadic, and finally disappear. On the solidi of Heraclius (see p. 192, *infra*, note) various letters or numerals occur in addition to the officina numerals. Probably a series of these varieties was struck at each officina.<sup>2</sup>

On the bronze (chiefly M) coins the officina numerals are A, B, Γ, Δ, Ε (1-5).<sup>3</sup>

THESSALONICA (*circ.* A. D. 518—*circ.* 620). Coinage in bronze only, usually not of a higher denomination than K. The coins are carelessly engraved, and often struck on irregular flans with jagged edges. THESSALONICA.

<sup>1</sup> Babelon, art. 'Obryzum' in Daremberg and Saglio, *Dict. des ant.*, and authorities there cited. On gold of Phocas (p. 164, note), OBXX takes the place of CONOB. BOXX occurs under Heraclius: cp. also Tiberius II, p. 106, No. 9.

<sup>2</sup> There are occasionally exceptional marks, such as ΘϞ on a solidus of Tiberius II; p. 106, No. 9, *infra*.

<sup>3</sup> On the peculiar numerals ΔII, ΓII, &c., found under Constans II, see *infra*, p. 268 n. It is doubtful whether these are officina marks.

## INTRODUCTION

*Mint-name.* TES; ΘΕC. Under Justin I, THESSOB (p. 17), but the inscription OB (i.e. *obryzum*, 'refined gold') is quite inappropriate on a bronze coin, and has probably been copied mechanically from the gold coins of the predecessors of Anastasius I, which are inscribed THSOB; TESOB.<sup>1</sup> It may be noted that OB had even previously appeared on silver coins, the gold and silver coins of Leo I (for instance) being alike marked THSOB. In the mint-indication COB found on some silver coins of Constantinople (see *supra*), we may probably discern the word OB(ryzum) loosely used for refined silver instead of refined gold.<sup>2</sup>

*Officina marks.* These are rarely present.

NICOMEDIA (*circ.* A.D. 498–*circ.* 627). The two Imperial mints of Asia Minor were Nicomedia and Cyzicus.<sup>3</sup> Their  
**NICOMEDIA.** coinage, closely modelled on that of the Capital, is in bronze only.

*Mint-name.* NIKO; also NIKOMI, NIKM, NIC, NIK, NI.

*Officinae.* Two only (A and B<sup>4</sup>), as compared with the five indicated on the bronze coins of Constantinople.

CYZICUS (*circ.* A.D. 518–*circ.* 628). Coinage in bronze only, resembling that of Nicomedia (q.v.).

*Mint-name.* KYZ; KY.

*Officinae.* Two only (A and B): cp. Nicomedia.

ANTIOCH (*circ.* A.D. 498–*circ.* 617). Bronze coins only. The legends on the obverse (i.e. the Imperial name and titles) are  
**ANTIOCH.** constantly blundered and often unintelligible.

*Mint-name.* At first, ANT<sup>X</sup>; ANT<sup>X</sup>I; AN. After A.D. 528 (see p. 53, n.), the name of the city having been changed to Θεούπολις, 'Antioch' disappears from the coins, and we find the new name, sometimes as ΘΥΠΟΛΙC or ΘY, but commonly in the Latin form THEYPO; THEYP'.  
 Ὡ; P̄; P̄ (see p. 59, n.) also indicate this mint. The exceptional SEYCY (p. 223) is no doubt only a blundered reproduction of THEYP'.

*Officinae.* Four or five officinae were usually at work.

ISAURA (A.D. 617/8). A mint for bronze, in the reign of Heraclius only (see p. 221).

*Mint-name.* ISAYR. *Officina.* A only.

<sup>1</sup> On No. 49, p. 17, we might read THESSOB as THESSO B, i.e. the mint name with the officina numeral added. But this interpretation is precluded by No. 50 (p. 17), where, in addition to THESSOB we find the officina numeral Ε.

<sup>2</sup> *Argentum pusulatum* (abbreviated Pv., Ps., &c.) is the proper term for refined silver.

<sup>3</sup> The short-lived mint of Isaura (q.v.) hardly forms an exception to this statement.

<sup>4</sup> There is an exception in the reign of Justin I; see *infra*, pp. 17, 18.

CYPRUS (*circ.* A.D. 627/8). Bronze coins were struck in this island under Heraclius, probably at Constantia, the chief city. It is doubtful whether the coinage continued beyond this reign, though some pieces struck by Heraclius, and countermarked by **CYPRUS**. Constans II (or Constantine IV?), may have for some time circulated in Cyprus (see p. 222, n. 4; cp. p. 267 n.).

*Mint-name.* ΚΥΠΡ'.

*Officinae.* The only officina numeral (at least on the British Museum specimens) is Γ.

ALEXANDRIA (from *circ.* A.D. 538: p. 62, n. 2 to Heraclius or Constans II: p. 227, n. 3). The coins (in bronze only) are mainly of the denomination **IB**. They are often very **ALEXANDRIA**. rude in appearance, and of peculiar thick fabric.

*Mint-name.* ΑΛΕΞ; ΑΛΕΙ (on ΑΒΑΖ; ΠΩΝ, &c., see pp. 227-229).

*Officinae.* No numerals occur at this mint.

CARTHAGE (*circ.* A.D. 534-*circ.* 698). This was a mint of importance during the whole period of the Imperial domination in Africa, i. e. from the conquest by Belisarius till the time of Justinian II or Tiberius III.<sup>1</sup> Its bronze coinage is abundant and its **CARTHAGE**. silver coinage (mostly confined to the smaller denominations) is not very rare.

The gold coinage must have been extensive, though it was not set on foot, apparently, till the reign of Heraclius. It is inscribed **CONOB**, like the gold coins of Constantinople, Ravenna and Rome. It is therefore identifiable only by its style and fabric and by a knowledge of provenance. When the solidus is of small module and lumpy fabric (e.g. Pl. XXXIII. 2) it is easily recognized as African, but the African solidus when struck of the ordinary size and with flat fabric (e.g. Pl. XXXIII. 6) is less readily distinguished. But there are certain criteria, in addition to the clues given by provenance.<sup>2</sup> Thus, a *linear* border generally takes the place of the border of dots found at Constantinople and elsewhere, and a straggling form of A— or —is employed by the Carthaginian engraver. The engraving of the types is often crude, and unusual letters or numerals frequently appear (e.g. under Constans II).

Though there seem to be good reasons for attributing both the thick and the flat series of solidi to Carthage, it is not obvious why these two dissimilar fabrics were employed at the same mint, and even, it would seem, contemporaneously.

*Mint-name.* Gold. **CONOB**.

Silver. **CONOS** (p. 63), but the mint-name is usually omitted.

Bronze. **KART**; **KAR**; **CAR**; **KRTÇ**; **CRTÇ**; **KTÇ**; **CT**.

<sup>1</sup> Cp. also p. xxxiii, *supra*, on the 'Provincial Coinage'.

<sup>2</sup> Wroth in *Corolla Numismatica*, p. 329, and *infra*, p. 290 n., and p. 292 n.

*Officinae.* On the solidi of Heraclius, officinae A-I (1-10) are recorded: the numerals 11, 12, 13, 14 which are also found on these coins are probably to be explained as officinae marks (pp. 230-232). On the solidi (both of the thick and the flat fabric), and on the semisses and tremisses of Constans II, peculiar marks occur. Thus (in the flat series) we find at the end of the inscription—the usual position for the officina number—such letters or numerals as C; Θ; Θς; ΘΙ, &c., each of these being accompanied by a letter (or numeral) placed in the field (P; I; C; A, &c.). Similar marks occur under Constantine IV.

The bronze coins are as a rule without officina marks. Under Justinian I, however, there are perhaps indications of five or six officinae (see pp. 64-67). We also find on some M and K coins of this reign the letters SO and O (p. 66), which may possibly indicate the second or the sixth officina. On coins of Phocas (p. 179) and of Heraclius, Ε (fifth officina) is found.

SICILY (CATINA, SYRACUSE), *circ.* A.D. 538?—*circ.* 705 or later?

**SICILY.** Coinage begins in this island a few years after the conquest by Belisarius (p. 69), and lasts till the sacking of Syracuse by the Arabs in A.D. 705 (see further, *supra*, p. xxxiii, 'Provincial Coinage' as to a possible coinage in Sicily after A.D. 705).

*Mint-name.* SECILIA (p. 152);  $\overline{\text{SCL}}^{\text{S}}$ ;  $\text{SC}^{\text{S}}$ ; SCL; CAT; CVPAKOVCI (cp. pp. 69, 153, 237 n.). The usual mint-place was Catina, but, from the time of Constans II, Syracuse was probably the chief centre of coinage. One coin of Justinian II (*Num. Zeitschrift*, i, p. 431) is inscribed CVPAKOVCI.

*Officinae.* Officina marks do not occur.

ROME (*circ.* A.D. 552/3—*circ.* 775). From the time of Justinian I to the reign of Heraclius inclusive, this mint seems to have

**ROME.** been of little importance, and to have coined only small denominations in bronze (see *supra*, pp. xvii, xviii).

Under Constans II a coinage in gold begins<sup>1</sup> and continues till the reign of Constantine V (died 775), after which it apparently ceases. The solidi attributable to this mint are marked CONOB but may be distinguished from the corresponding Constantinopolitan issues by their comparatively high relief (rendering the coins rough to the touch), by the appearance of symbols (star, &c.) and letters in the field, and to some extent by the colour of the gold, which from the time of Leo III is greatly alloyed.

*Mint-name.* CONOB (on gold); ROM; RM; R (pp. 387, 388).

*Officinae.* No marks on the bronze. On the gold (from Constans II) various officina numerals and letters occur in the field.

<sup>1</sup> There are also some small silver coins. The coins that seem to have the best claim to be Imperial Roman issues are the bronze pieces with the name and portrait-head of Justinian (Pinder and Friedlaender, *Münzen Justinians*, Pl. V. 3, and p. 48), but even these may be Ostrogothic.

RAVENNA (*circ.* A.D. 555–*circ.* 741). Coinage begins some years after the taking of Ravenna by Belisarius, and continues almost to the time when it was lost to the Empire through its capture by the Lombards in 751. Ravenna was a somewhat important mint for gold coinage.<sup>1</sup> The silver (as at Carthage) is generally of small denominations, though the hexagram of Heraclius was minted there as well as at Constantinople. The bronze coins are now somewhat scarce.

RAVENNA.

The coins of this mint are often very neat, even sometimes rather elegant, in style. The gold coins (inscribed CONOB) may be distinguished from the corresponding pieces of Constantinople by their bracteate-like fabric and by the prominent relief of inscription and type.

*Mint-name.* CONOB (on gold); RAVENNA; RAVEN; RAV; RA.

*Officinae.* There are indications that ten officinae were generally in operation for the coining of the gold. Marks on the bronze rarely occur (Є, Maurice Tiberius; A, Δ, Heraclius: on SS, see p. 157).

CHERSON (6th cent.; and *circ.* A.D. 886–989). This mint was never important, and issued bronze coins only, usually of small size. It perhaps first came into operation in the reign of Justinian I (see p. xviii, *supra*). Its next issues were made under Maurice Tiberius (p. 158 f.), but it does not seem to have coined again till the reign of Michael III (with Basil I, A.D. 866). From this period there is a continuous coinage till the time of Basil II, when Cherson was taken (A.D. 989) by Vladimir the Russian.

CHERSON.

*Mint-name.* In monogram under Justinian I (see A. V. Oreshnikov, ‘Chersono-Byzantine Coins’ in *Trans. Moscow Num. Soc.*, iii (1905), Pl. VIII. 1–3); ΧΕΡCΩΝΟC, ΧΕΡCΟΝΟC (reign of Maurice Tiberius); ΠΧ = ‘Ο πρωτεύων Χερσῶνος?, or Π = ΠΟΛΙC?

*Officinae.* No officina marks occur, but on the coins of Justinian I, of an uncertain mint (possibly Cherson), described *infra*, pp. 72, 73, the marks A to Δ are found.

PROVINCIAL COINAGE (*circ.* A.D. 698–*circ.* 886). The coinage which it is necessary to classify thus vaguely has been already referred to, p. xxxiii, *supra*. It consists of gold and bronze pieces (the former often much alloyed), and the engraving is stiff and crude. Coins of Carthage have evidently served as its prototypes, yet it cannot be of Carthage, for it continues to be issued long after the Imperialists had lost their foothold in Africa. Sardinia and Sicily may possibly have had a share in it. It lasts from the reign of Tiberius III to the time of Basil I.

‘PROVINCIAL’  
COINAGE.

CENTRAL AND SOUTH ITALIAN COINAGES (seventh cent.–*circ.* 842).

<sup>1</sup> Apparently first issued in the reign of Justin II (see pp. 103–104).

These strange coinages are closely modelled on the Constantinopolitan money, though they are generally struck in gold of a more or less debased quality. They have been discussed, p. xxxi f., *supra*. They were probably struck for the Imperial possessions in Southern Italy, though some specimens (included in this Catalogue for convenience) may not have been really issued at Imperial mints. The gold coins attributed to Rome (see *supra*, p. xxxii) are akin to these Central and South Italian coinages.

The following table summarizes the details given above:—

A. D. 498–518	6th cent., from A. D. 518	7th cent.	8th cent.	9th cent.	10th cent.	11th–15th cent.
Constantinople	Constantinople	Constantinople	Constantinople	Constantinople	Constantinople	Constantinople
Nicomedia	Thessalonica	Thessalonica				
	Nicomedia	Nicomedia				
	Cyzicus	Cyzicus				
Antioch	Antioch	Antioch				
	Alexandria	Alexandria				
	Carthage	Carthage				
	Sicily	Sicily	Sicily			
	Rome	Rome	Rome			
	Ravenna	Ravenna	Ravenna			
	Cherson			Cherson	Cherson	
		Isaura				
		Cyprus				
		'Provincial'	'Provincial'	'Provincial'		
		'Italian'	'Italian'	'Italian'		

## § 6. INSCRIPTIONS AND DATES.

The inscriptions found on Byzantine coins are short and not very varied in character.<sup>1</sup> The material that they supply for study is therefore somewhat scanty, but can be dated with considerable accuracy.

*Obverse legends.* The obverse legend usually consists of the name of the Emperor, preceded by DN (*Dominus noster*) and followed by PPAVC (*Perpetuus Augustus*). This applies to the coins from Anastasius I to Justinian II.<sup>2</sup> Greek inscriptions begin to make their appearance (on the obverse) under Irene, the mother of Constantine VI (A. D. 797–802),<sup>3</sup> but Latin is not completely abandoned till the time of Isaac I (A. D. 1057). In the Greek legends, the place of *Dominus* and *Perpetuus Augustus* is taken by ΒΑΣΙΛΕΥC or ΒΑΣΙΛΕΥC ΡΩΜΑΙΩΝ; sometimes by ΑΥΤΟΚΡΑΤ'; and, from the time of Romanus IV (A. D. 1067–1071), by ΔΕΣΠΟΤΗΣ.

<sup>1</sup> Metrical legends are very rare, see *supra*, p. lvi.

<sup>2</sup> Philippicus and some of his successors have *Multus An.* (&c.) instead of PPAVC.

<sup>3</sup> There are still earlier instances of *obv.* Greek inscriptions on the 'Provincial' coinage of Leo III (A. D. 720).

*Reverse legends.* In the earlier reigns we find such legends as *Victoria Aug.*; *Gloria Romanorum*; *Victori(a) Mauri* (Maurice Tiberius). Heraclius introduces *Deus adiuta Romanis* and the legend **EN TSTO NIKA**, the latter furnishing the first instance of a Greek legend on Byzantine coins.<sup>1</sup> But it is long before Latin legends are finally discarded. Justinian II introduces **IHS CRISTOS REX RESNANTIUM** (often used in later reigns). Under Constantine V (A.D. 751) we have **IHSYS XRISTYS NICA** (ii, p. 380), a curious instance of the mingling of Latin and Greek, and of the partial writing of Greek words in Latin letters, errors into which the engravers of later reigns were prone to lapse; e.g. **ΘEOFLACTOS DESP<sup>S</sup>** (Michael I and Theophylact): **CVRIE BOHΘH TO SO DOVLO** (Theophilus); **PICTOS** for **ΠICTOC**; **PATHR** for **ΠΑΤΗΡ** (Leo IV). These mixed legends are not completely supplanted by purely Greek legends till about the time of Romanus IV (A.D. 1067–1071).

# REVERSE LEGENDS.

The following forms of letters are those which chiefly call for notice:—

## I. LATIN INSCRIPTIONS.<sup>2</sup>

### A

The usual form is **A** (sometimes **Λ**). The form **A** is very rare; it is found chiefly at Carthage and Ravenna. At Carthage the straggling form **Λ** is often used. **Λ** is not very common, and chiefly occurs in the word **ANNO**.

# LATIN INSCRIPTIONS.

### B

**B**, or with the lower lobe projecting as in the word **CONOB**. From the time of Tiberius II onwards, **b**, or more usually **ϐ**.

### D

**D** (Anastasius I—Justin II: on the coins of Justin II and Maurice Tiberius carelessly formed so that it appears nearly as **O**). Under Tiberius II **ϐ** comes in and tends to oust **D** in later reigns. (Under Heraclius, **d** occurs; under Constantine V, **σ**; on coins of Artavasdes and Leo VI, **ϐ**.)

### E

**ϵ** is nearly always preferred to **E**.

### G

**ϐ**; **ϐ**, the latter form often carelessly engraved so as to resemble **I**; e.g. **AVI** = **AVϐ**. **G** is not found. Under Tiberius II we find **ϐ** (in **A4ϐ**), which form occurs in later reigns as well as **G** and **ϐ**. Under Justinian II **ϐ** and **G** are found as forms of **G**.

<sup>1</sup> Except in mint-names like **KYZ**.

<sup>2</sup> A division between Latin and Greek is not always easy, owing to the admixture of letters and the writing of Greek words in Latin letters.

## H

The form employed is **h**: cp. p. 331 n.

## L

Both **L** and **l** occur.

## M

**M**, but under Tiberius II **m** comes in on the Constantinopolitan coins (on coins of Rome and Ravenna the form is **m**).

Maurice Tiberius. **M**; **m**; **m**; (at Carthage, generally **M**).

Phocas, **m**; Heraclius, **m**.

Constantine IV (at Carthage, **М**).

Constantine V, **m**, Michael I, **m**.

Michael III, **m** (at this period **M** is chiefly retained in the inser.

**RECNANTI4M**).

## N

**N** is the usual form. Under Justinian II, **h** is found, and from the time of Constantine V this form takes the place of **N**.

## R

**R**. On the coins of Anastasius II Artemius, the Greek **P** is generally written for **R** in 'Artemius'.

## T

**T**. The form **τ** first occurs in the word **ΤΗΕΥΡ** = Theoupolis (Antioch) under Justinian I, whose other coins, however, have **T** (**τ** also often occurs on the blundered coins of Antioch struck under Justin II).

**T** continues in use till the reign of Heraclius, when **τ** begins to be used, and is the usual form subsequently employed (the form **T** is, however, also retained in stereotyped legends like **VICTORIA AVC**).

**Ϛ** is an occasional variant of **τ** (Constantine IV, Justinian II, &c.). The form **Ϛ**, found on some coins of Constans II (pp. 266, 301), is no doubt **τ** with the abbreviation mark ' subjoined. Anastasius II has **T**; Theodosius III, **T** and **τ**. Under Leo VI (p. 445) the form **Ϛ** is found.

## V

**V** (as in **AVC**; **VOT**). Under Tiberius II, **υ** becomes prominent as in **VICTOR(ia)** **TIBERI** and **υΙΥ** (i.e. *vivat*) **FELIX** (p. 106), but **V** is found at Carthage, as in **LVX MVNDI**.

Maurice Tiberius has **V**.

Phocas, Heraclius, Constans II, use both **υ** and **V**. Afterwards, **υ** is the usual form. (A rare form **Ϙ** is found, p. 54.)

## II. GREEK INSCRIPTIONS.

## A

Usually  $\Lambda$ ; also  $\Delta$ . Under Nicephorus II, Phocas, John I and Basil I,  $\Lambda$  sometimes occurs.  $\Delta$  (p. 221, No. 267, Heraclius) is found on a coin of Heraclius struck at Isaura and  $\Delta$  occurs also on coins of John VIII (see *infra*, p. 637, note 1 and p. 641, note 1).

GREEK  
INSCRIPTIONS.

The form  $\Lambda$  (Alexandria, Heraclius, p. 227) is exceptional. The transverse bar is sometimes omitted, notably on the coins of Alexius I ( $\Lambda$  for  $\Delta$ ).

## B

Beta as a numeral often occurs on the coins. It has the forms  $\beta$ ,  $\beta$ ,  $\beta$  and  $\beta$  (chiefly sixth and seventh centuries).

$\beta$  occurs in such words as  $\beta\Delta\text{SLIS}$ ,  $\beta\Delta\text{SILISSH}$  (Constantine V; Irene);  $\text{MIXAHL } \beta\Delta\text{SIL}\epsilon$  (Michael I);  $\beta\text{OH}\theta\text{H}$  (Theophilus), but in these cases there is a curious mixture of Greek and Latin.

Under John I Zimisceus, the  $\text{R}$  form appears, as in  $\text{ROH}\theta\text{H}$  (for  $\beta\text{OH}\theta\text{H}$ ). Also  $\text{H R}\Lambda\chi\epsilon\text{PNITICCA}$ , i.e. the Virgin of Blachernae (coins of Theodora);  $\text{RACI}\Lambda\epsilon\text{VS P}\Omega\text{M}$  (Isaac I). Cp. p. 527, note 1.

Under Andronicus II and later Emperors the  $\beta$  form once again takes the place of the  $\text{R}$  form.

 $\Delta$ 

$\Delta$ ; sometimes  $\Delta$ .

## E

$\epsilon$  (not  $\text{E}$ ) is the almost invariable form. On coins of Andronicus II and III (A.D. 1325–1328),  $\epsilon$  has the form  $\epsilon$  or  $\text{E}$  (p. 626 n.).

## K

$\text{K}$ . The Latin letter  $\text{C}$  used for  $\text{K}$  appears under Constantine V and is the usual form till about the time of Isaac I (A.D. 1057) when  $\text{K}$  re-asserts itself.  $\epsilon\text{C } \theta\epsilon\gamma = \epsilon\text{K } \theta\epsilon\text{OY}$ ;  $\text{C}\epsilon = \text{K}\epsilon = \text{KAI}$  (Basil I);  $\text{CVRI}\epsilon$  *sic* =  $\text{KVPI}\epsilon$ .

 $\Lambda$ 

$\Lambda$ ; but the Latin  $\text{L}$  often takes its place, as in  $\text{TOVLO} = \Delta\text{OV}\Lambda\text{W}$  (Theophilus).

## M

Sometimes  $\text{M}$ , as on coins of Isaac II, p. 594, *infra*.

Ξ

This letter chiefly occurs on the rude coins of the Alexandrian mint where we find Ξ (Justinian I, p. 62; Justin II, p. 97); Ζ (Tiberius II, p. 121); Ξ (Maurice Tiberius, p. 148).

Ξ in ΑΛΕΞΑΝΔΡΟΣ (coins of Basil I, p. 437, No. 5, and of Leo VI, p. 447).

Ξ in ΟΡΘΟΔΟΞΩ (silver of Isaac I).

Σ or Ζ is usual in the spelling of the name of Alexius I, but Ξ is also used.

Ζ and Ξ (Alexius III).

Π

Π or Π.

Ρ

Ρ; but until about the time of Constantine IX the Latin R is often used, as in the word ΡΩΜΑΙΩΝ; again, we find on coins of Basil II ΡΟΡΦΥΡΟΥ (i.e. ΡΟΡΦΥΡΟΓΕΝΝΗΤΩ as written on coins of Theodora).

Σ

The Latin S is often used for Σ till about the time of Constantine IX when the lunate sigma—C—becomes the regular form. The straggling form 2 or 3 sometimes occurs under Manuel I and later (see p. 572, note 1, *infra* and p. 630).

Υ

Υ is used for Υ (as in ΘΕΥ = ΘΕΟΥ). But the form in the purely Greek inscriptions is V.

Ω

Nearly always Ω, but sometimes approximating to W, as on the coins of Romanus I, *circ.* A.D. 919. Ω sometimes occurs, as under Constantine X (p. 515) and under Alexius I (p. 543).

ABBREVIATION MARKS.

These do not frequently occur till the time of Constantine VI or

ABBREVIATIONS. Nicephorus II Phocas, when they become common.

The usual mark is / as in ΔΕΣΠΟ/ (*despotés*); S also occurs, as in ΒΑΣΙΛΕ<sup>S</sup>; ΣΟΛ<sup>S</sup>; also 3.

S = *et* or ΚΑΙ (SIR = *et Irene*; period of Constantine VI).

C = S = *et* (Constans II, p. 259).

On coins of Constans II, ~ and ~ are perhaps marks of abbreviation (see *infra*, p. 266 n.).

The omission of letters is sometimes marked by -, as in the familiar  $\overline{\text{MP}} \overline{\text{ΘY}}$  accompanying the figure of the Virgin;  $\overline{\text{SCL}}^{\text{S}} = \text{Sicil}^{\text{S}}$ .

More rarely a dot indicates an abbreviation, as in  $\text{EN X}\dot{\text{W}}$ , i.e.  $\text{EN XPICTW}$  (John I, Zimisces). On a coin of Leo VI (ii, p. 444, No. 1) we find  $\text{Ϸ}$ , in the word  $\text{ROM}\dot{\text{W}}\text{N}$ , i.e.  $\text{ROMAIWN}$ .

$\text{Θ} = \text{Ⓐ} = \text{ὁ ἅγιος}$  before the name of a Saint; e.g.  $\text{Θ ΘEOΔWPΟZ}$ , St. Theodore (coins of Manuel I).

#### LIGATURES.

These are of very rare occurrence till the time of Alexius I. Those found are chiefly as follows:— $\text{MH}$  (in  $\text{KOMNHNNW}$ );  $\text{NH} = \text{NH}$ ;  $\text{ϰ} = \tau\hat{\phi}$ ;  $\text{ϸ}$  and  $\text{Ϲ} = \text{ST}$  (Alexius III, pp. 599, 600);  $\text{Ϸ}$  in  $\text{ΓEϷΓIOC}$  = St. George (Alexius III);  $\text{ϸ} = \text{OY}$ ;  $\overline{\text{MP}} = \text{MHTHP}$ ;  $\text{P} = \text{ST}$  (Andronicus II, p. 615);  $\text{ΔH} = \text{ΔH}$ ;  $\text{Δ} = \text{EY}$  (John VIII, p. 640);  $\text{HANΔ.Λ}$  = Manuel II;  $\text{ΠI}\tilde{\text{X}}$  Manuel II = Palaeologus.

#### LIGATURES.

#### MONOGRAMS.

The monogrammatic combinations that are so characteristic of Byzantine art occur but rarely on the coins. Their use is, in fact, mainly confined to the city of Cherson, where monograms form the usual 'types' of the coins from Romanus I to the period of Basil II and Constantine VIII, i.e. *circ.* 920–1025. Some coins of Justinian I also bear monograms as a 'type' (i, pp. 72, 73): these are of 'Uncertain mints', though possibly of Cherson (p. xviii, *supra*). The monograms of the Justinian period are arranged so as to form a block of letters; but from the time of Constantine VII and Romanus I, the letters of the monogram are usually attached to the extremities of a cross; e.g. Pl. LII. 14.

#### MONOGRAMS.

Apart from these instances the monogram is hardly found except to indicate the names of various Emperors:—Heraclius (subsidiary device in field); Pl. XXIII. 10, *rev.*, &c.  $\text{I}$  = monogram of Constans II and of Constantine IV (p. 267 n.; Pl. XXXIV. 15; Pl. XXXVII. 21); monogram of Justinian II, p. 339, No. 47 (Sicily); monogram of Tiberius III (Pl. XL. 18). See also at end of Index III.

#### NUMERALS.

The officina numerals and the marks of denomination (e.g.  $\text{M} = 40$  nummia) are in Greek.

Dates (see further, *infra*) are nearly always indicated by Roman numerals, and the following examples may be cited:— $\text{V} = 5$  (usual form).  $\text{IIII} = 5$  (Justin II, p. 94).

#### NUMERALS.

¶ = 6 (usual form). ¶I = 6 (Justin II).

¶II and ¶¶ = 7 (Justin II); ¶I and ¶II = 7 (Tiberius II, Antioch);  
VII = 7 (Heraclius, Ravenna).

¶II, ¶III and ¶¶¶ = 8 (Justin II); VIII = 8 (Justin II, Carthage). (On a coin of Heraclius, No. 469, p. 253, *infra*, ¶III = 8 occurs. This coin is attributed doubtfully to Ravenna: the use of ¶ instead of the V usually found at Ravenna is one of the reasons for regarding the attribution to that mint as doubtful.)

IX = 9 or 11? (Justin II, p. 95).

¶IX = 13 (Maurice Tiberius, p. 147).

X¶ = 15 (Justinian I).

X¶I, X¶ = 16 (Justinian I); ¶IX = 16 (Maurice Tiberius, p. 147);  
XVI = 16 (Heraclius, Ravenna).

¶¶X = 17 (Maurice Tiberius, p. 147).

X¶¶¶ = 19 (Justinian I).

XX¶, XXVI = 26 (Justinian I).

XX¶¶¶, XXVIII, XX¶¶ = 29 (Justinian I).

XXX¶, XXX¶I = 36 (Justinian I).

XXX¶I, XXXVII = 37 (Justinian I).

#### DATES.

Dates first make their appearance in 'years 12' of Justinian I (A. D. 538/9), and occur regularly (though only on the bronze money, and not on all denominations of the bronze) till the reign of  
**DATES.** Constans II. After that reign (as will be seen below) they are rarely found.

The dates nearly always indicate regnal years, the first year of the 'reign' being reckoned from the day on which the Emperor became Caesar or Augustus, a creation which may have taken place before his *sole* reign began. For example, Tiberius II, who became Augustus and sole ruler 26 Sept. 578, dates his (Constantinopolitan) coins from Dec. 574, when he was created Caesar by Justin II.

Dating by Indictions is found only on coins of Maurice Tiberius and Constans II.

**JUSTINIAN I.** Regnal years. At Thessalonica (p. 41, *infra*), the letters A P occur, with no accompanying date. It is not certain whether these stand for *anno primo*.

**JUSTIN II.** Regnal years, dated from his accession. (At Carthage, p. 97, *infra*, PR ANNO presumably = *primo anno*.)

**TIBERIUS II.** On his coins of Constantinople, the earliest date found is 'year 4', reckoned from his Caesarship of A. D. 574, and therefore indicating the year 578, the first year of his sole reign. But at Thessalonica, years '1' and '3' occur, apparently reckoned from the first year of his

sole reign, i. e. from A. D. 578. At the Thessalonica mint, however, there are other dates (year 8, &c.) which are reckoned, in the usual way, from his Caesarship of 574.

At Antioch, the system of dating presents some difficulties which are discussed *infra*, pp. 125, 126.

MAURICE TIBERIUS. Regnal years. At Carthage the only dates found are the Indictions.

PHOCAS. Regnal years.

HERACLIUS. Regnal years. At the Carthage mint dates are not found, unless the numerals inscribed on some of its gold coins are dates rather than officina numerals (p. 232, *infra*).

CONSTANS II. At Constantinople, some of the coins are dated in the usual way (by regnal years), but a curious series of numerals is also found there which may be either dates (regnal years), or dates (regnal years) combined with the officina number. This latter class is discussed *infra*, p. 268.

In Sicily, there is a case of dating by Indiction (cp. coins of Maurice Tiberius), and on the **K** and **I** attributed to Sicily, a date 'year 1' occurs, perhaps indicating the first year of the residence of Constans II at Syracuse (A. D. 662; see p. 305, *infra*).

CONSTANTINE IV. Dates (regnal years) occur at Ravenna, but at Constantinople they cease to appear except in an isolated instance, viz. **X** = year 30 = A. D. 683/4, reckoned in the usual way, from A. D. 654,  
**X**  
**X**  
the first year of Constantine's Augustus-ship.

JUSTINIAN II. A few dates occur during his first and second reigns (see pp. 335, 356). In the following reigns no dates are found, and the bronze coins, on which alone it had been customary to mark the dates, now become rare.

CONSTANTINE V (A. D. 741-775). The only date found—and it is apparently an exceptional commemorative date—is  $\Delta \text{X} = \text{year } 30 =$   
 $\text{N X}$   
 $\text{N X}$

A. D. 749/50, reckoning from 25 March, 720, when Constantine was made Augustus by Leo III (see p. 380).

On coins of Leo IV and Constantine VI no dates are found.

IRENE has **M** coins with  $\text{N X}$  (apparently modelled on the  $\Delta \text{X}$  of  
 $\text{N X}$   
 $\text{N X}$

Constantine V). The same combination of letters and numerals is repeated in subsequent reigns, but finally ceases in the time of THEOPHILUS. As this combination is found on coins of Emperors who reigned less than thirty years, it cannot indicate 'year 30'. Probably it is a religious ejaculation, *Χριστὸς νικᾷ*, thrice repeated (see p. 400, *infra*).

In concluding this Introduction, I am anxious to express my indebtedness, especially in regard to its historical section (§ 2), to the writings of Finlay, Bury, Diehl, Schlumberger and other scholars whose monographs are cited in these volumes. I am also indebted to Professor Oman's brilliant sketch of Byzantine history, and to the learned historical summary by Gelzer appended to Krumbacher's great work on Byzantine Literature.

In preparing the main body of the Catalogue I have referred throughout to Sabatier's *Description* (1862), a laborious and useful work, though defective in many ways, as has long been recognized. De Saulcy's *Essai de classification* (1836), I have also found well worth reading. Yet there are numerous problems in connexion with Byzantine coins which these meritorious numismatists did not suspect or did not attempt to solve, and it is to be regretted that their successors, the numismatists of the last forty years, have—with a solitary exception or two, such as Dr. Kubitschek and M. Svoronos—almost entirely neglected the study of Byzantine coins—a field of study which (it cannot be denied) is at times an arid one, but which would already have yielded to historical students an infinitely better crop had it been sown with a more liberal hand and cultivated with less intermittent care. There is one numismatist, indeed, the late Count J. F. W. de Salis, who, although he left little in print or manuscript on Byzantine coins, must be gratefully remembered by an official of the British Museum writing on this topic. For de Salis not only enriched our national collection with numberless Byzantine and quasi-Byzantine coins (barbarous imitations, &c.), but classified the series with his usual skill and acumen. Unfortunately, his arrangement was in many places left incomplete, and he published nothing to record or justify his classification—a classification no doubt often suggested by the knowledge of provenance which as an ardent collector he probably possessed. His special service to the scientific study of Byzantine coins is the discrimination attempted by him between the Imperial and the non-Imperial money, and if I have been able to carry this division farther it is because the path has been indicated by this remarkable numismatist.

For kind help in reading the proof-sheets of these volumes, I have greatly to thank Mr. Grueber, the Keeper of Coins, and Mr. G. F. Hill. Mr. O. M. Dalton has also been so kind as to read the proofs of the Introduction and has made several valuable additions and corrections.

WARWICK WROTH.

# IMPERIAL

## BYZANTINE COINS

### ANASTASIUS I

11 APRIL, 491—1 JULY, 518

The primary classification of the coins is under Mints, which, in the present reign, are as follows: I. Constantinople; II. Nicomedia; III. Antioch.

No.	Weight	Metal and Size	Obverse	Reverse
I. CONSTANTINOPLE				
Solidus				
1	68.6	Λ .8	<p>DNANASTA SIVSP PAVC<sup>1</sup> Bust of Anastasius, beardless, with head three-quarters r.; wears helmet with plume and armour; r. hand holds spear behind his head; l. hand (not represented) supports shield decorated with the group of a horseman r. attacking with spear a prostrate enemy.<sup>1</sup></p>	<p>VICTORI AAVCCC Winged Victory in chiton and peplos standing l., holding in r. staff surmounted by sacred monogram (✠); in ex., CONO B; in field l., star.</p> <p>B at end of inscr. [Pl. I. 1.]</p>

<sup>1</sup> PPAVG = Perpetuus Augustus. G has here (and in later reigns) the form C, C, (, or even l. The shield (originally nearly of oval form) can be seen more distinctly on the solidi of preceding reigns, e.g. Arcadius (Montagu *Cat.*, Pl. XXXVI, No. 1036); so also its device of the horseman and enemy.—BORDERS OF BYZANTINE COINS. As a rule, all Byzantine coins are ornamented both on obverse and reverse with a border (see e.g. Pl. II. 3), which may be described as a reel border, from its resembling a series of reels or rings strung together. In the present Catalogue the borders are, as a rule, only described when of some unusual character.

No.	Weight	Metal and Size	Obverse	Reverse
			DNANASTA SIVSP PAVC Bust of Anastasius, as on No. 1.	VICTORI AAVCCC Victory (as on No. 1), holding staff with monogrammatic cross (☩); in ex., CONO B; in field l., star. <sup>1</sup>
2	69.	A .8	[F. Parkes Weber gift, 1906]	Γ at end of inser.
3	66.4	A .85		Δ at end of inser. [Pl. I. 2.] -
4	69. (pierced)	A .8	[Bank of England gift, 1877]	€ at end of inser.
5	64.3	A .85	[de Salis gift]	H at end of inser.
Semissis				
			DNANASTA SIVSP PAVC Bust of Anastasius r. beardless, wearing diadem, cuirass and paludamentum.	VICTORIAAVCCC Victory wearing mantle over lower limbs seated r. on shield and cuirass <sup>2</sup> ; on her knees she supports a shield on which with her r. hand she inscribes XXXX; in front, ☩; in ex., CONOB
6	33.6	A .7		[Montagu sale, 1896, No. 1086] [Pl. I. 3.]
7	33.2	A .7		[J. E. Sinyanki, 1852]
8	31.7	A .7	[Purchased, 1904]	(Cuirass rude) <sup>3</sup> (☩)

<sup>1</sup> There are Italian imitations of this type with reverses of fairly good work, but with obverse unskilfully treated, especially as regards the eyes. Those in the British Museum supply the numerals Γ, S, and I.

<sup>2</sup> These details appear more clearly on earlier coins, e.g. on a solidus of Arcadius (Montagu *Cat.*, No. 1036), and on a semissis of Zeno (Montagu, No. 1071).

<sup>3</sup> Compare a semissis of another type, Montagu *Cat.*, No. 1089 (from Coll. d'Amécourt); *rev.*, VICTORIA ACVSTORVM (*sic*) Victory seated on cuirass, and winged Genius supporting shield inscribed VOT·P·C; in ex., COMOB. (Cp. *Catal. Ponton d'Amécourt*, p. 140, No. 870.) This is, perhaps, not of the Imperial mint.

No.	Weight	Metal and Size	Obverse	Reverse
Tremissis				
9	22.6	AV .6	DNANASTA SIVSP PAVC Bust of Anastasius r. beardless, wearing diadem, cuirass and paludamentum.  (DNANASTAS IVSPER PAVC) [Pl. I. 4.]	VICTORIAAVCVSTO RVM Victory in chiton advancing to front, looking back l.; in r., wreath; in l., globus cruciger; in field r., star; in ex., CONOB  (AVCVSTRPVM altered in the die from AVCVS TOPVM <i>sic</i> ). [de Salis gift]. <sup>1</sup>  [de Salis gift] [Pl. I. 5.]  [de Salis gift]  [de Salis gift]  [Royal Collection]  [Dr. Cullen of Kustendji, 1868]
10	22.	AV .55		
11	22.5	AV .6		
12	21.8	AV .55		
13	21.2	AV .6		
14	22.8	AV .6		
15	17.2	AV .55		
Silver				
16	29.3	AR .7	DNANASTA SI[VSP PAVC] Bust of Anastasius r. beardless, wearing diadem, cuirass and paludamentum.	VOT MVLT within wreath <sup>2</sup> ; MTI in ex., CONO[S?].  [Purchased, 1902] [Pl. I. 6.]

<sup>1</sup> The excellent style and the *lectio difficilis* (PERP) of the obverse seem to show that this coin is of the Imperial mint, in spite of the blundered reverse.

<sup>2</sup> The type and legend recur under Justinian I, *infra* 'Carthage', AR: cp. Sab., Pl. XII. 11 (VOT MVLT HTI). Cp. also Pinder and Friedlaender, *Münzen Justinians*, p. 26.

There are also silver coins of a higher denomination (size .9):—

(i) Inscr., Bust of Anastasius l.; *rev.* CLORIA ROMANRV Emperor nimbate standing l.; r. hand raised; l. hand holds globe; in ex., CONOB. Sab., No. 7 (=Saulcy, Pl. I. 3); cp. Quelen, *Cat.*, No. 2360 ('Romanorvm').

(ii) Inscr., Bust of Anastasius r.; *rev.* CLORIA ROMANORVM Emperor nimbate standing l.; r. hand holds spear; l. hand rests on shield; in ex., COR (*sic*). Sab., No. 8; Pl. IX. 2.

No.	Weight	Metal and Size	Obverse	Reverse
Bronze				
(i) <i>Large module with marks of value, M, K, I</i>				
<b>M</b>				
(40 nummia)				
			DNANASTA SIVSP PAVC Bust of Anastasius r. beardless, wearing diadem, cuirass and paludamentum.	<b>M</b> on r., star; on l., star; above, cross: in ex., <b>CON</b>
17	269.5	Æ 1.4	[de Salis gift]	(On r., crescent, on l., star), beneath, <b>Ε</b> . Pellets in field. [Pl. I. 7, rev.]

			<p style="text-align: center;">M</p> <p>DNANASTA SIVSP M on r. and l., star; above, PAVC Bust of Anastasius r. beardless, wearing diadem, cuirass and paludamentum. cross; beneath, star; in ex., NIKOMI</p>	
61	252.2	Æ 1.35	(Rude work)	[Pl. II. 3.]

<sup>1</sup> Following the example of his predecessors Zeno and Leo (cp. Sab., Pl. VIII.21; VII. 9), Anastasius issued small coins with his monogram as the *rev.* type (Friedl. *Münzen der Vandalen*, pp. 42 and 50). This issue doubtless preceded the other bronze coinages of his reign, which are apparently not earlier than A. D. 498 (see *Introd. supra*, § 2, under 'Anastasius I'). Most of the extant specimens of this monogram type appear however to be Ostrogothic imitations (cp. Friedl., p. 41 f.) on which the bust is rudely represented and the inscription curtailed or omitted (on *rev.*, usually border of dots instead of wreath).

### COINS WITH NAME OF ANASTASIUS NOT STRUCK AT THE IMPERIAL MINTS.

In this reign, and in the following reigns, only those coins are catalogued which there is reason to think were struck at the Imperial mints (in the present case, Constantinople, Nicomedia, and Antioch). The numerous imitations (chiefly in gold, and of the fifth, sixth, and seventh centuries) of the Emperors' coinages which were struck by the Ostrogoths and other invaders of the Empire are reserved for description in a future volume. The British Museum collection of Ostrogothic, Vandalic, &c., coinages was originally arranged by Count de Salis (cp. Keary, *The Coinages of Western Europe*, 1879), who has divided the various series with his usual numismatic acumen. The chief criteria are furnished by style and provenance.

The following are brief notes on the imitations of the coins of Anastasius:—

**GOLD.—Solidus.** The Victory on the *rev.* usually holds a broad-limbed cross, *not* the monogrammatic cross of the Imperial mints, though this latter type is occasionally imitated (see *supra*, p. 2, n. 1). On the solidi assigned by de Salis to the Vandals the lettering is curious and the type somewhat rude.

<sup>1</sup> The attribution to Anastasius is not quite certain.

The Visigothic solidi, also, are not hard to distinguish from the Imperial coins: they frequently read **COHOB**. The series classed by de Salis as 'Italian imitations' are often of good work (except sometimes in the treatment of the eyes on the *obv.*) but have *rev.* Victory with broad-limbed cross. The Burgundian and Merovingian imitations are rude. *Tremissis*. This denomination is often reproduced, but usually with *rev.* Victory *in profile* with wreath and palm. The *rev.* of the Imperial *tremissis* has a different Victory (**Pl. I. 4, 5**). The legends of the Visigothic and 'Italian' *tremisses* are often blundered. The Imperial *tremissis* is itself of poor work, and in cases where its reverse type is *exactly* copied discrimination is difficult. The details of the Emperor's cuirass are, however, less exact in the imitative pieces and the brooch of the paludamentum is sometimes omitted. Count de Salis classes some pieces reading **COMOB** (cp. *Rev. belge*, 1867, p. 156) as Italian imitations.

**SILVER.**—Sabat., No. 11, *rev.* monogram in wreath, has peculiar letters and high relief. Ostrogothic or Italian. Sabat., No. 12, *rev.* 'Invieta Roma'. Probably Ostrogothic, struck at Rome: see Friedlaender, *Münzen d. Ostgothen*, p. 55. The well-executed gold and silver coins of Theodoric the Ostrogothic monarch (A. D. 493) bear the name and bust of Anastasius, but are distinguished by Theodoric's monogram (Keary, *op. cit.*, p. 45 f.).

**VITALIANVS.** Most of the coins that have been published as those of Vitalian (for whose revolt see *Introd.*, *supra*, § 2, 'Anastasius I') are undoubtedly barbarous pieces of the time of Justin I, Justinian I, &c. Thus a *tremissis* which reads **IAVITA JIVOVAVG**, and which has been attributed to Vitalian, is undoubtedly a barbarous coin (Visigothic), probably of the time of Justin I or later. (Two specimens in British Museum.) See further Sabatier, i, p. 157; de Saulcy, *Essai*, p. 6; Friedlaender, *Repertorium*, p. 426; *Rev. belge*, 1857, p. 10. There is a *tremissis*, however, in the possession of Mr. J. W. Barron (1907) which appears to read **DNVITALIANVS** (*obv.* beardless diademed head, *rev.* Victory). Unless this legend has been altered from **DNIVSTINIANVS** the coin must be of Vitalian.

**BRONZE.**—Small **Æ** with *rev.* **V** in wreath. The wreath, the Roman (instead of Greek) numeral and the style of the *obv.* (with type and letters in rather prominent relief) indicate that this coin is of *Italian* mintage. This being so, it cannot have been struck by Anastasius, but must be an Ostrogothic coin bearing the head and titles of the Emperor as was usually the case with the 'barbarian' coins.

## JUSTINUS I

1 JULY, 518—1 AUGUST, 527<sup>1</sup>Mints = I. Constantinople; II. Thessalonica; III. Nicomedia; IV. Cyzicus;  
V. Antioch.

6	40.8	Æ .8 (plated)	(Æ with gold plating; probably an ancient forgery.)	I at end of inscr.

<sup>1</sup> For coins of his joint reign with Justinian I see *infra* after 'Justinus I'.<sup>2</sup> The solidi of this reign (cp. also those of Justinian) are very rude, and the specimens here described might well be classed as 'barbarous imitations'. If there were prototypes more worthy of the Imperial mint they must have disappeared or have become exceedingly scarce. One solidus of this style was procured in Roumania (coll. of Mr. Horace Sandars, 1905).<sup>3</sup> A description of the gold coins acquired by the British Museum from the collection of the Duc de Blacas was published by Madden in *Num. Chron.*, 1867 and 1868.<sup>4</sup> This coin may not be of the Imperial mint.<sup>5</sup> A specimen in Photiades *Cat.*, No. 95, with the numeral Θ (9).

12	22.6	A .6		
13	23.	A .65	[C. A. Murray, 1849]	(Ends RV)

<sup>1</sup> Besides the *semisses* and *tremisses* here catalogued there are other pieces with the same types and legends, but distinguished (a) by their thinner, spread fabric, (b) by ruder work and lower relief, especially on the *obv.* These may, conceivably, be (i) the coins of Justin I, (ii) barbarous imitations of the coins of Justin I, or (iii) the coins of Justin II. The third of these attributions seems to be the most satisfactory, especially as it provides Justin II (to whom Sabatier has assigned only *solidi*) with *semisses* and *tremisses*. (See further under Justin II.) The history of the small gold currency seems to have been as follows: Justin I issues *semisses* and *tremisses* of relatively good style. Then Justinian I strikes pieces of ruder style, thinner fabric and lower relief. His successor, Justin II, issues similar pieces of still ruder style. Lastly, under Tiberius II Constantine, a new *rev.* type—the cross—is substituted for the Victory that had hitherto appeared on *semisses* and *tremisses*.

				I
			DNIVSTINVSP[SV ?]	I surmounted by cross. BCON CORDI
			Bust of Justin r. beardless, wearing diadem, paludamentum and cuirass.	
36	76.6	Æ .65	[Northwick sale, 1860]	(Thick fabric). <sup>3</sup> [Pl. III. 7.]

<sup>1</sup> Struck on a flan too small for the types, but probably intended to pass for the same value as Nos. 34 and 35.

<sup>2</sup> *Rev. num.* iv (1839), p. 244; Pl. X. 3, with DNIVS IVSTVSP, is apparently of Justin I and Justinian I.

<sup>3</sup> No. 36 is certainly of Justin I (cp. fabric and inser. of Anastasius I). Nos. 37-9 differ from it in fabric and No. 38 presents a new *obv.* type. These may possibly be of Justin II, but it seems best to keep to the general rule that the coins of the second Justin (with certain fairly clear exceptions as at Carthage) always represent the Emperor and Empress on the *obv.*, and not the Emperor singly.

<sup>1</sup> On the group of the Tyche of Antioch and the Orontes which was apparently originated by Eutyehides, a pupil of Lysippus, and which first appears (so far as coins are concerned) on the money of Tigranes, king of Armenia, see Wroth, *Brit. Mus. Cat.*, 'Galatia,' p. lx. f.

# COINS WITH THE NAME OF JUSTIN I NOT STRUCK AT THE IMPERIAL MINTS.

**SOLIDUS.**—As stated above (note 2, p. 11) even the solidi that appear to have emanated from the Imperial mint are deeply tinged with barbarism. Besides these we have the following Italian imitations: (i) *rev.* Victory I. with broad cross **.COMOB.** *obv.* of fairly good work; (ii) *rev.* Victory with monogrammatic cross, rude work; (iii) later, extremely barbarous. Other imitations, apparently Burgundian, are very similar to the 'Italian' both of classes i and ii. Montagu *Cat.*, lot 1092 (now in British Museum) belongs to this series. **TREMISSIS.** Burgundian and Visigothic imitations; *rev.* Victory r. with wreath. The Visigothic pieces are of rough work. There are also 'Italian' imitations with the same *rev.* type as those of the Imperial mint, but distinguished by the *high relief* of the letters. (The treatment of the letters in high relief is characteristic of the **Æ** coins struck in Italy—Ostrogothic, &c.)

**VANDALIC SILVER.**—*Obv.* name and head of **IVSTINVS** in profile; *rev.* **FELIX CARTA**; female figure standing. Though this coin is assigned by Sabatier (No. 17) to Justin I, it is clear that it cannot have been struck by the authority of Justin I, i. e. before the taking of Carthage, which did not occur till the reign of Justinian. Mr. Keary (*Coinages of Western Europe*, p. 36; cp. p. 32) supposes that the coin was struck by Justin II, and though this is a possible view, I am inclined to doubt it for the following reasons:—(i) We have other **Æ** (African) coins of Justin II with *obv.* head facing; *rev.* **FELIX RESPVBL(ica)**. (ii) The *Felix Carta* type first occurs on coins of Hilderic the Vandal king, A. D. 523–30 (Friedl., *Vandalen*, Pl. I, and pp. 30–3). There is great difficulty in supposing that Justin II would have adopted a Vandal type, and one, moreover, that had been for many years disused, for it was never adopted by his predecessor Justinian for his African coinage.

It will thus be seen that there are difficulties in assigning the coin either to Justin I or to Justin II. I therefore regard it as a *Vandalic* issue of the period of Justin I. There are, of course, numerous instances of the barbarian rulers placing the name and head of the reigning Emperor on the obverses of their coins.

**OSTROGOTHIC SILVER.**—There are a number of small **Æ** (*rev.* **CN**; <sup>**P**</sup><sub>\*†\*</sub> &c.; also **Æ** with *rev.* **K**) which bear the name and head of **IVSTINVS**. It is certain from style and provenance that these were struck in Italy. They closely resemble (on the *obv.*) the silver coins that bear the names or monograms of the Ostrogothic kings, and I believe the whole series to be Ostrogothic, struck either during the lifetime of Justin I, or possibly even after his death, for in style (especially in the case of the *obv.*) many of them seem to be later than the silver coins of Justinian. Baduila, when at war with

Justinian, is known (Keary, *Coinages of Western Europe*, p. 52) to have placed on his money the head and name of the long-deceased emperor, Anastasius I, and he may also have adopted on his money the head of Justin I.

BRONZE.—Small Æ with *rev.* V in wreath. These must be Ostrogothic ; cp. similar coins with name of Anastasius, *supra*, p. 10, 'Bronze'.

Small Æ with *rev.* € and † in wreath. Although these have the Greek (not Roman) numeral, I am inclined to regard them as Ostrogothic on account of the wreath and the style of the *obv.*, with head and letters in prominent relief. (One specimen (British Museum) has *rev.* EN, the wreath being omitted.)

## JUSTINUS I AND JUSTINIANUS I

## JUSTINIANUS I

1 AUGUST, 527—14 NOVEMBER, 565

Mints = I. Constantinople; II. Thessalonica; III. Nicomedia; IV. Cyzicus; V. Antioch (Theoupolis); VI. Alexandria; VII. Carthage; VIII. Sicily; IX. Rome; X. Ravenna; XI. Uncertain Mints.

No.	Weight	Metal and Size	Obverse	Reverse
I. CONSTANTINOPLE				
Gold Medallion				
Circ. A. D. 534?				
			DNIVSTINII (sic) ANVSPPA VC Bust of Justinian, nimbate, three-quarter face to r.; wears richly ornamented helmet with plume of peacocks' feathers; also diadem, cuirass and military cloak fastened by brooch; in his r. hand, spear; behind l. shoulder, shield. Border of dots.	SALVSETCL ORIA RO- MANO RVM Justinian on horse riding r., preceded by winged Victory in chiton and mantle, holding in l. palm-branch and trophy of arms. Justinian is nimbate and diademed, and wears plumed helmet, cuirass with <i>pteryges</i> , military cloak and boots. On the horse is a decorated saddle-cloth and jewelled trappings. In field, star; in ex., CONOB: border of dots.

FRONTISPIECE.—*A*, size 3.35 inches. Photographed from an electrotype (in the British Museum) of the original, which was formerly in the French Collection. The only specimen of this medallion that has ever come to light was found in 1751 at Caesarea in Cappadocia. It passed into the French Collection, but was melted down by the thieves who plundered the coin-cabinet in 1831. A mould, fortunately taken from the original some time before this date, has been preserved in the British Museum, and from this electrotypes have been made for the French and English collections. See Babelon, *Mélanges numismatiques*, iii, p. 305 f., and his article in *Rev. num.*, 1899, p. 1 f.; Pinder and Friedlaender, *Münzen Justinians*, p. 18 f., Pl. II. Cp. note, *infra*, under Tiberius II Constantine, as to the gold medallion sent to Chilperic.

The original weighed 'cinq onces deux gros', equivalent to 36 solidi or half a Roman pound (Babelon, *Mélanges*, pp. 312 and 321). The head-dress on the *obr.* is like the *τοῦβη* worn by the equestrian figure of Justinian in the Augusteum at Constantinople; see Diehl, *Justinien*, p. 27. With the *rev.* type compare the Barberini ivory (frontispiece to Diehl's *Justinien*), where, however, the imperial figure has been called by Strzygowski (*Der Dom zu Aachen*, p. 49) Constantine the Great. Cp. also the Kertch silver disk (Diehl, *op. cit.*, p. 30) and a plaque in British Museum, Dalton, *Cat. Christian Antiq.*, No. 543.

With regard to the date of the medallion, Babelon (*Mélanges*, iii, p. 331) cites Cedrenus (vol. i, p. 649, ed. Bonn) to the effect that this Emperor struck a coin representing himself on one side and on the other side his general Belisarius in armour and the inscription Βελισάριος ἡ δόξα τῶν Ῥωμαίων. In this passage Babelon sees, and no doubt rightly, an allusion to this gold medallion, though the description of the reverse figure as Belisarius is an inexactitude. The description of Cedrenus may, however, give a clue to the date, and Babelon would assign the issue of this medallion to the time when Belisarius celebrated at Constantinople his triumph for his conquest of Africa [spring of A. D. 534]. It may be added that the bust on this medallion bears a general resemblance to the bust that appears on those gold solidi of Justinian that were issued previous to his twelfth year, i. e. 538/9. In that year a new bust (differing from the bust on the gold medallion) was introduced. The date of the medallion is therefore in all probability not later than A. D. 538, and may be as early as A. D. 534.

<b>Solidus</b>				
Three-quarter face types <sup>1</sup>				
<i>Before April A. D. 538</i>				
			<b>DNIVSTINI ANVSP PAVC</b> Bust of Justinian, beardless, with head three-quarters r.; wears helmet with plume and armour; r. hand holds spear behind his head; l. hand (not represented) supports shield decorated with the group of a horseman r. attacking with spear a prostrate enemy.	<b>VICTORI AAVCCC</b> Victory standing facing, holding in r., long cross; in l., globus cr.; wears chiton and peplos; in ex., CONOB; in field r., star.
1	69.	A' .85	[Purchased, 1904]	B at end of inscr.
2	69.	A' .8	(DNIVSTINI ANVSP PAVC)	Γ at end of inscr. [Royal Collection]
3	65.	A' .8	[Purchased, 1904]	Ε at end of inscr.
4	68.	A' .85	(Ruder than No. 3)	Ε at end of inscr.
5	67.2	A' .8	[Sinyanki, 1852]	Θ at end of inscr. [Pl. IV. 9.]
6	66.3	A' .85	[Purchased, 1904]	I at end of inscr.
			<b>DNIVSTINI ANVSP PAVC</b> Bust of Justinian with head three-quarters r. (as on No. 1, but wears diadem as well as helmet).	<b>VICTORI AAVCCC</b> Victory standing l., holding in r. globe with the monogram ✠; wears chiton and peplos; in ex., CONOB; in field l., star. <sup>2</sup>
7	69.4	A' .8	[Purchased, 1904]	I at end of inscr. [Pl. IV. 10.]

<sup>1</sup> The solidus with the three-quarter face *obv.* (with two different *rev.* types) precedes the solidus with the full-face *obv.*, which latter was probably introduced in April A. D. 538 as a comparison with the large bronze coins marked ANNO XII (=A. D. 538/9) suggests (cp. Pl. V. 4, &c.).

<sup>2</sup> A rare coin (cp. the specimen at Paris, also with I, figured by Pinder and Friedl., p. 71= Sab., No. 1). Both the 'three-quarter face' and the later 'full-face' solidi have on the *rev.* a facing Victory. The appearance of this *profile* Victory is, therefore, remarkable. Possibly the coin may not belong to the Constantinopolitan mint, but there is no particular evidence in the matter.

Semissis				
			DNIVSTINI ANVSP PAVC Bust of Justinian r. beardless, wearing diadem, cuirass and paludamentum.	VICTORIAAVCCC Victory wearing mantle over lower limbs seated r. (on shield and cuirass, rudely delineated); on her knees she supports a shield on which with her r. hand she inscribes numerals; in front, $\Phi$ ; behind, star; in ex., CONOB
19	34.3	AV .75	[Rich]	On shield, XXX <sup>1</sup> [Pl. IV. 13.]
20	32.8	AV .7	[Purchased, 1904]	(rev. rude)
21	34.7	AV .8	[de Salis gift]	(rev. rude: in front, $\Phi$ )
Tremissis				
			DNIVSTINI ANVSP PAVC Bust of Justinian r. beardless, wearing paludamentum and cuirass.	VICTORIAAVCVSTO RVM Victory in chiton advancing to front, looking back l.; in r., wreath; in l., globus cr.; in field r., star; in ex., CONOB <sup>2</sup>
22	22.2	AV .65	[Bank of England gift, 1877]	[Pl. IV. 14.]
23	22.6	AV .6	[C. A. Murray, 1849]	
24	21.5	AV .65	[de Salis gift]	
25	21.4	AV .65	(DNIVSTINI ANVSP PAVI)	[C. A. Murray, 1849]

<sup>1</sup> Probably the numerals have no significance at this period, and are more or less blundered. Cp. Pinder and Friedl., op. cit., p. 22.

<sup>2</sup> These are of careless work, especially on the *rev.* In spite of this they appear to belong to the Constantinople mint; the style of the Italian *tremisses* is very different. A specimen of the Constantinople tremissis of better style than our Nos. 22-5 belongs to the Nikosia Museum, Cyprus.

<sup>1</sup> K series, profile and full-face types. The coins here described bear no mint-name, except Nos. 113, 114, of years 14 and 15, which are marked CON and which are pieces of exceptionally small module. There are also K coins of year 14 which are *without* mint-name and of the ordinary module.

There is, no doubt, considerable difficulty in supposing that Constantinople issued this *double* series of coins in year 14, and it may be thought that the K coins without mint-names cannot belong to Constantinople. On the other hand, it would be surprising if the capital which issued 1 coins (with mint-names) did not issue the higher denomination, K, year by year. The small K coins marked CON can hardly be its sole issues of this denomination, and I am disposed to attribute the whole series of K coins to this mint.

K coins marked  and P are attributed *infra* to Antioch.

<sup>1</sup> For year xii, Pinder and Friedl., p. 44.

<sup>2</sup> This *rev.* type is produced, unintentionally, by the impression of the *obv.* type of another coin (from the same die), which, through an oversight, was not removed from between the dies after being struck. Similar instances are found in the earlier Roman mints, and indeed in mints of most periods and countries.

<sup>3</sup> The letter P occurs on K coins assigned *infra* to Antioch. But all the dated I coins of that mint have the *full-face* type on *obv.* Constantinople seems to be the most likely mint.

			<div style="text-align: center;"> <p>€<sup>1</sup></p> <p>DNIVSTINI ANVSP PAVC Bust of Jus- tinian r. beardless, wearing diadem, cuirass and paluda- mentum.</p> </div>	€ within reel border.	
139	51.6	Æ .8	[Bank of England gift, 1877]	On r., Δ [Pl. VI. 7.]	

<sup>1</sup> The coins with € are without the mint-name. Some € coins with a letter (numeral) in front of the € were struck by Anastasius I (Pl. II. 1) presumably at Constantinople—or, at any rate, not at any African or Italian mint. The € coins of Justinian I may, therefore, with some probability, be attributed to Constantinople, with the exception of one class, which shows the € encircled by a wreath and which is of *thicker* fabric than usual. These thick coins, in type, resemble the Ostrogothic bronze pieces bearing the name of Justin I (cp. also those with the name of Justinian), and I am inclined to regard them as Ostrogothic issues, although the style and lettering of their obverses is not distinctively Italian. Of these Ostrogothic € coins there are two *obv.* types, profile and full-face.

The coins of the € denomination with *rev.* monogram of Justinian within C (i.e. €), *obv.*, a head and blundered legend, are described *infra* under 'Uncertain mints' of Justinian I. Another series of € coins with *obv.*, monogram of Justinian I, is also described among the 'Uncertain' of Justinian.

There are also scarce € coins of Cyzicus, marked  $\frac{K}{Y}$  (see *infra*): the fabric of these is like that of the € coins here assigned to Constantinople.

182	12.	Æ .45	B DNIVSTINIANVSP PAVC Bust of Justinian r., as on No. 180. (Inscr. partly obscure)	B between two stars. [Presented by Mr. George Finlay, 1854] [Pl. VI. 15.]	

<sup>1</sup> Varieties exist with a cross (Pinder and Friedl., p. 41) and  $\text{✠}$  (*Revue belge*, 1862, p. 183) above the  $\Delta$ . No. 180 was found at Athens (Finlay, *Hist. of Greece*, i, p. 446), as were also Nos. 181, 182, marked  $\Gamma$  and B. The  $\Gamma$  and B coins closely resemble in the style of their obverses the *obv.* of No. 180, and I have no hesitation in attributing them to Thessalonica. The coins of this mint are pieces of 16, 8 and 4 units, with 3 and 2 as smaller change. The ordinary Imperial system of 40, 20, &c., only makes its appearance here at the end of the reign (see coins with K). In Mommsen's view (*Monn. rom.*, iii, p. 166), the coins of Thessalonica marked '16' (15), '8,' and '4' are probably 'des seizièmes, trente-deuxièmes et soixante-quatrièmes de siliqua, et peuvent être évaluées à 15<sup>3</sup>/<sub>8</sub>, 7<sup>13</sup>/<sub>16</sub>, 3<sup>29</sup>/<sub>32</sub> deniers.' CHERSON. For a coin attributed by Sabatier to this mint, see Sab., No. 130 (Justinian I); cp. Pinder and Friedl., p. 41.

			[de Salis gift]	Beneath, Δ?; in ex., ΘΥΠΟΛΣ
267	212.	Æ 1.2	([DNIVSTI]NIA NVS PPAVSC) [Purchased, 1904]	Beneath, Δ; in ex., ΘΥΠΟΛ[S]

<sup>1</sup> The coins of this mint which bear the name 'Antioch' must be earlier than Nov. 29, 528, when the city, having suffered severely from an earthquake, assumed the name of Θεούπολις, which is henceforth always found on the coins (H. Leclercq in Cabrol's *Dict.*, 'Antioche', p. 2390). (The title of the Patriarch was ὁ πατριάρχης τῆς μεγάλης θεοῦ πόλεως Ἀντιοχείας, Pinder and Friedl., p. 32 n.; Schlumberger, *Sigil.*, p. 314, &c.)

The coins with the name 'Theoupolis' (written sometimes in *Latin*) probably extend from circ. A. D. 529 onwards. There are three *obv.* types: (i) profile, (ii) seated figure, (iii) full-face. The full-face type, introduced at most mints in year 12, i.e. A. D. 538/9, here first appears in year 13=A. D. 539/40. There are no coins of year 14=April, 540–March, 541, a circumstance accounted for by the destruction of Antioch by Chosroes in June, 540. Subsequently the city was again rebuilt and beautified by Justinian, and there are coins of many of the later years of his reign.

The name of Theoupolis is still found on a seal of a Byzantine Duke of Antioch of the eleventh century—ΔΟΥΞ ΤΗΣ ΜΕΓΑΛΗΣ ΘΕΟΥΠΟΛΕΩ(Σ) ANTIOX(εας), Schlumberger, *Sigil.*, p. 310, No. 4.

<sup>2</sup> There are two principal varieties: (i) with the mint-name written in Greek, (ii) with the mint-name in Latin. S at end of the Greek name is an abbreviation mark.

323	160.	Æ 1.05	[Purchased, 1904]	On r., XXXI; beneath, $\bar{\epsilon}$	31= 557/8

<sup>1</sup> Nos. 317-23 may be attributed to Antioch on account of  $\overset{\circ}{\Pi}\bar{\chi}$ , P, and  $\bar{\epsilon}$ , which seem to indicate abbreviations of the legends  $\tau\eta\gamma\overset{\circ}{\Pi}\bar{\chi}$ ,  $\tau\eta\gamma\bar{\epsilon}$ , and  $\tau\eta\epsilon\chi\bar{\rho}$  found on the M coins of Antioch. In point of style also these pieces agree fairly well with the M pieces. The *obv.* of No. 319 is remarkably like in style to the *obv.* of an I coin bearing the name of Antioch, No. 327 *infra*.

The coins with  $\overset{\circ}{\Pi}\bar{\chi}$  had already been attributed to Antioch by Sabatier (No. 79), as well as another variety with  $\tau\eta$  (No. 78).

IB (12)					
			DNIVSTINI ANVSP PAVC Bust of Justinian r. beardless, wearing diadem, cuirass and paludamentum.	I+B <sup>2</sup> — ΑΛΕΞ	
342	74.	Æ .7	[Purchased, 1904]	[Pl. IX. 8.]	
343	84.3	Æ .75			

<sup>1</sup> On the analogy of other coins ΛΓ must be the mark of value 33 (nummia) though it does not fit in with the other denominations of Alexandria, which are 12, 6, and 3 nummia. Cp. Pinder and Friedl., p. 30; *Num. Chron.*, xvi, p. 114. On the exceptional denominations of Alexandria, see Mommsen, *Monn. rom.*, iii, p. 167, and Babelon, *Traité*, i, p. 617.

<sup>2</sup> These appear to be the earliest coins issued at Alexandria during the 'Byzantine' period. The Alexandrian coins marked IB, assigned by Sabatier (Pl. XI. 15) and other writers to Justin I, may, it seems to me, be much more conveniently assigned to Justin II (see Pl. XIII. 1), (i) because the increase in the number of the mints of the Empire appears to begin with Justinian, (ii) because these pieces are ruder in style than the corresponding coins struck by Justinian, but (iii) chiefly because IB coins of Alexandria are needed for the reign of Justin II, otherwise there would be an inexplicable gap between Justinian I and Tiberius II Constantine, both of whom issued Alexandrian coins of the same type and fabric.

			DNIVSTINI ANVSP PAC Bust of Justinian r. beardless, wearing diadem, cuirass and paludamentum; border of dots.	VOT MVL within wreath; HTI beneath, CONOS <sup>4</sup>	
350	18.4	Æ .55	(Λ for A) [Purchased, 1904]	[Pl. IX. 11.]	

<sup>1</sup> See Pinder and Friedl., p. 31. For coins with palm-tree, *rev.* S (ibid., p. 32), see *infra* under Heraclius, Alexandrian mint.

<sup>2</sup> Though the bust is worn and the inscription illegible, the coin may with probability be attributed to Justinian. It has the thick fabric and the broad border (on the *rev.*) of the Alexandrian mint, and differs in fabric from the Γ coins of Thessalonica described *supra*. Cp. the Æ in Pinder and Friedl., p. 32; *obv.* Γ, *rev.* palm-tree.

<sup>3</sup> Possibly at the end of A. D. 533; see *Introd., supra*, § 2, Justinian I (Carthage).

<sup>4</sup> These coins though inscribed CONOS (=CONOB) were undoubtedly struck in Africa (at Carthage). The rude style of the *obv.* and the wreath of the *rev.* are evidently suggested by the silver coins of Gelimir, the last king of the Vandals. The *rev.* type and the legend CONO[S ?] (but MTI for HTI) had already occurred on the Æ of Anastasius I struck at Constantinople; see Anastasius I, No. 16, *supra*, and note.

387	102.4	Æ .7	(A for AC) [Purchased, 1904]	(Inscr. incomplete) <sup>2</sup> [Pl. X. 6.]	

<sup>1</sup> Pinder and Friedl. (*Münzen Justin.*, p. 37 f.) suggest that the type (cp. the word VICTORIA on the E coins described *infra*) refers to the victory of Belisarius over the Vandals. The type is certainly appropriate, but it had long been familiar as the type of the *tremissis* (legend, *Victoria Augustorum*). In any case the attribution to Carthage on the ground of *provenance*, &c., is well made out by them, loc. cit., p. 38.

<sup>2</sup> Of thick, rough fabric, curiously like the Alexandrian coins of the third century A. D.

			[Purchased, 1864]	[Pl. X. 10.]	
401	53.	Æ .55	[de Salis gift]		

<sup>1</sup> I follow de Salis (who has not, however, recorded his reasons) in assigning this coin to Sicily. It has some of the neat characteristics of Italian coins (also note the wreath on the *rev.*), but cannot be proved to be Italian. Nor is it Carthaginian, for the Carthaginian coins of the X denomination are of a different type and fabric.

The mint-place may have been Catina, the name of which is recorded on Æ of Maurice Tiberius and later coins. The full-face type of the *obv.* almost certainly proves that the coin was not issued earlier than A. D. 538. It is thus a few years later than the conquest of Sicily by Belisarius (A. D. 535).

Nos. 400, 401 (*rev.* cross) are of ruder work on the *obv.* than No. 399, but the thick fabric and the stars (on *rev.*) are in favour of the Sicilian attribution. They are evidently of the same denomination as No. 399, and the cross can be so turned that it presents nearly the appearance of X.

<sup>1</sup> On this mint see Introd., § 2, Justinian I, Italian mints; also *infra*, on 'Coins with the name of Justinian not struck at Imperial mints'. The word ANNO and the date on this coin recall the money of Ravenna (cp. Pinder and Friedl., p. 47), but the attribution to Rome seems preferable (i) from the resemblance to the Æ of Rome struck by Justinian's successors, (ii) because Greek (not Latin) numerals (for the denomination) appear to be usual on the Ravenna coins of Justinian's reign.

<sup>2</sup> Cp. Pinder and Friedl., *Münzen Justin.*, p. 57 (with year 31); cp. p. 48. Compare Æ of Justin II (Pl. XIII. 13) with XX ROM.

## XI. UNCERTAIN MINTS

## Silver

Small silver pieces with *obv.* helmeted head, *rev.* K (also *rev.* R, &c.), are assigned by Sabatier (i, p. 180, Nos. 23, 24, Pl. XII. 9, 10) to the time of Justinian I 'on grounds of style', but it can hardly be said that their style is conspicuously like that of the coins of this emperor. Some pieces are of neater work than others, and some of the heads may be compared with the heads on the *Invicta Roma* series of Æ Ostrogothic coins (Sab., Pl. XIX. 25). A solitary specimen (*obv.* bearded head, l., *rev.* K) occurred in the Chatby (Alexandria) find (see *infra*) of 'Byzantine' gold coins, which ranged in date from Constantius II to Heraclius, i. e. fourth cent. A. D. to *circ.* A. D. 641. Their date is not easily determined, but they would seem to be not earlier than the fifth or later than the middle of the seventh century. I think also it may be a question whether these pieces are not *tesserae* rather than coins.

Sabatier interpreted K and R as 'Constantinople' and 'Rome', but he did not know of a third variety with P on the *rev.*, which can hardly be identified as the initial-letter of a city-name.

The British Museum possesses the following specimens (sizes .45 in. to .6 in.) :—

## I.

*Obv.* Helmeted female bust, r.; border.

*Rev.* K; border. Cp. Sab., Pl. XII. 10.

Æ 22 grains. Bought of N. Dimitri (together with some Lycian and Phrygian coins) in 1862.

20 grs. Purchased, 1904.

15.7 grs. de Salis gift.

14.8 grs. Woodhouse gift, 1866.

12.8 grs. de Salis gift.

(Cp. also *Revue belge*, 1905, p. 160, describing a Æ piece, weight 1.5 gramme=24 grains, *obv.* 'Buste barbu tourné à gauche'; border of dots. *Rev.* K; border of dots. From the Chatby find of 1903.)

## II.

*Obv.* Similar to Class I.

*Rev.* P; border.

Æ 15.1 grs. de Salis gift (*obv.* of pretty style).

11. grs. Purchased, 1860.

## III.

*Obv.* Similar to Class I.

*Rev.* R; border. Cp. Sab., Pl. XII. 9.

Æ 15.2 grs. Bought of de Salis, 1867.

10.3 grs.

10.3 grs. Bought in "1902" (perhaps procured in Constantinople).

420	23.7	Æ .6	[de Salis gift]	In front, Γ	
421	20.6	Æ .7	[de Salis gift]	In front, Δ	

<sup>1</sup> Cp. Pinder and Friedl., p. 55 f.; Koehne, *Mus. Kotschoubey*, i, p. 205. The *obv.* legend appears to be always blundered, and it is possible that these coins are not the product of any Imperial mint.

<sup>2</sup> Sabatier's interpretation (i, p. 191, No. 125) as  $\Phi$ . IOVCTINIANOV $\Sigma$ , or rather  $\Phi$ . IOVCTINIANOV, seems almost certain, though the use of < for C or  $\Sigma$  is somewhat curious (Sabatier's Pl. XVII. 5 is incorrectly drawn).

Most of Justinian's coins of the  $\text{€}$  denomination appear to have been struck at Constantinople (see note, *supra*, p. 39); some others at Cyzicus. The specimens here described (No. 414 ff.) have usually jagged or irregular flans, like the smaller  $\text{Æ}$  of Thessalonica. They might, therefore, be attributed to that mint, were it not that the denomination  $\text{€}$  (5) does not readily find a place in the system of division (16, 8, 4) that predominated at Thessalonica. Information as to the usual provenance of these coins is desirable. Some pieces are of thick fabric. (Koehne, *Mus. Kot.*, i, p. 203, strives to read the inscr. as the name of Cherson, and assigns the coins to that city.)

### COINS WITH THE NAME OF JUSTINIAN I NOT STRUCK AT THE IMPERIAL MINTS.

**GOLD.**—*Visigothic*. Chiefly tremisses of very barbarous work (*rev.* Victory in profile with wreath). Some solidi classed by de Salis as Hispano-Byzantine are rather rude on *obv.* (facing type) and read P.P.AV or PAVI *sic*.

*Burgundian*. Solidus. *Obv.* inscr. blundered; rude bust with head in high relief. *Rev.* Victory in profile.

*Ostrogothic and Italian*. Solidi. Three-quarter face type of bust on *obv.* *Rev.* Victory in profile holding broad cross, inscr. COMOB. These are certainly not Imperial. Also *obv.* Full-face type. *Rev.* Victory facing, holding long cross. Some of these are obviously non-Imperial, with the face

very broad and large eyes, a caricature of the ordinary full-face type. On the other hand some of the better-executed specimens of this full-face type may *possibly* be issues of the Imperial mint (Rome or Ravenna), but this is doubtful. On the whole, however, a comparison with the non-Imperial Italian coins (especially with the *obv.*) rather suggests that these pieces also are not Imperial but Ostrogothic. A solidus at Berlin (*Z. f. N.*, i, p. 303) and a neatly executed tremissis (Brit. Mus.; cp. Pinder and Friedl., p. 23), each inscribed ROMOB, also have some claim to be regarded as Imperial coins.

The Ostrogothic or Italian tremissis is easily recognized by the comparatively high relief of types and lettering (cp. Pinder and Friedl., p. 24, Pl. III. 5). The Victory on the *rev.* has a blurred and rough appearance. There are also some very flat thin specimens (Lombardic?).

*Indian Imitations.*—A thin, bracteate-like gold piece with barbarous legend imitating the solidus (*obv.* full-face head of Justinian). This was acquired by the British Museum in 1886 from Lieut.-General G. G. Pearse, a well-known collector of Indian coins. There can be little doubt that it was made in antiquity in India, probably in *Southern India*, where imitations of ancient coins are generally found, according to the information given me by Prof. Rapson.

SILVER.—There are many small coins of various types which are of undoubted Italian work. Specimens in British Museum: *rev.* cross on globe; star; sacred monogram; monogrammatic cross and stars; CN; PK; PKE, &c. All these have the *rev.* type enclosed in a wreath. Comparison (especially as regards the high relief of the *obv.*) with the money of the Ostrogothic kings suggests that these pieces also are Ostrogothic and not coins of the Imperial mint. There are similar Æ with the head of Anastasius and the head of Justin I.

BRONZE.—Pieces of minute size with various *rev.* types, and *obv.*, usually of barbarous work, diademed head, accompanied by the more or less blundered name of IVST . ., IVSTINIAN . ., &c.; cp. Friedl., *Vandalen*, pp. 42 f. and 50 f. Some of the rudest pieces appear to have circulated among the Vandals (though some specimens are found in Italy, Friedl., *op. cit.*), to whom small coins with the heads of earlier emperors had long been familiar. Possibly the issue of these—at a local mint (hardly Carthage)—continued even after the conquest of Africa. These pieces have been little studied by numismatists, and may be left over for description among the coins of the Vandals and Ostrogoths.

The Italian Æ coins are of peculiar style and may be generally recognized by the high relief of the *obv.*, the wreath enclosing the *rev.* type, the patina, &c. The fine bust of Justinian on the Roman Æ with *rev.* M in wreath is closely modelled on the bust of Theodahat, as portrayed on his large, thick Æ coinage.

## JUSTINUS II

15 NOVEMBER, A. D. 565—5 OCTOBER, 578

Mints = I. Constantinople; II. Thessalonica; III. Nicomedia; IV. Cyzicus;

			DNIVST INVS Justin II and the Empress Sophia draped and nimbate, seated on double throne side by side, facing; each rests r. hand on book; between heads, cross; in ex., CONOB; border of dots.	SALVS [AVC?] Half-length figure of Constantinople facing, looking r.; she wears helmet and tunic <sup>1</sup> and aegis on r. shoulder; in r. hand, spear; in l. hand, globus cr.; in ex., VICTORI[A]; border of dots. <sup>2</sup>	
26	16.	A .6		[Purchased, 1904] [Pl. XI. 6.]	

<sup>1</sup> As appears by comparison with the costume of 'Constantinople' on the solidi of Justin II, though here the dress has rather the appearance of a cuirass with pteryges.

<sup>2</sup> Cp. Sab., No. 9. The word VICTORIA (which is not the main legend) would at first sight seem to label the figure as Victory. But an *unwinged* Victory is improbable, and the figure is evidently identical with the figure on Justin's solidi, which (from a comparison with other similar representations) would appear to be Constantinople. VICTORIA, then, is probably an ejaculation, like the VITA on other coins of Justin and Sophia.

27	16.	Æ .65	(Each has tall head-dress instead of the nimbus; the hands of each are clasped on breast; thrones separate; no book.)	[de Salis gift] [Pl. XI. 7.]	
Bronze					
M					
			DNIVSTI NVSP PAVC Justin II (on l.) and Sophia (on r.) nimbate, and wearing tall head-dresses <sup>1</sup> and long robes, <sup>2</sup> seated facing on double throne <sup>3</sup> ; Justin holds in r. globus cr.; Sophia holds in r. cruciform sceptre.	M on l., A N N O above, cross; in ex., CON	
28	210.3	Æ 1.3	[Purchased, 1904]	On r., I; beneath, Γ	1= <sup>4</sup> 565/6
29	185.5	Æ 1.05	[Pl. XI. 8.]	On r., I; beneath, Γ	1= 565/6
30	189.7	Æ 1.05	(AC for AVC) [de Salis gift]	On r., I; beneath, Δ	1= 565/6
31	207.	Æ 1.15	[Purchased, 1904]	On r., I; beneath, €	1= 565/6

<sup>1</sup> The head-dresses are apparently of the same ceremonial kind as those worn by Justinian and Theodora in the famous mosaics of San Vitale at Ravenna. Sophia's (like Theodora's) is a kind of 'stephane', which has jewelled pendants and is surmounted by jewelled ornaments, which on the coins are conventionally represented by a sort of turreted crown (No. 29) or by three leaf-like projections (Nos. 42, 43).

<sup>2</sup> The jewels worn by the Empress are clearly seen on No. 38.

<sup>3</sup> The throne is cushioned, and in front are separate foot-rests, or more often a sort of ornamented dais, on which the feet are placed (see especially the M coins of Cyzicus, note on M coin of year 11, *infra*).

An upright projection of the throne is shown on the side of the Empress; this has at first sight the appearance of the side of the throne, but probably it is the upright support of the *back* of the throne (see the details clearly given on a M coin of Cyzicus of year X, *infra*, note).

On the mosaic of St. Sophia above the doors of the narthex the Christ is seated on a throne with a horizontal crossbar at the back, which is supported on each side by a nearly semicircular support. In front of the throne is a solid dais-like footstool (Bayet, *L'art Byz.*, p. 53, Fig. 12).

The introduction of this detail on the coins is probably due to a desire for symmetry—the projection of the throne is made to balance the globus cruciger held by the Emperor.

<sup>4</sup> Justin's accession took place Nov. 15, 565; see Bury's *Gibbon*, v, pp. 1, 2.

<sup>1</sup> This is really the decoration of the foot-rest or dais beneath the throne. A similar ornamentation may be seen on many of the M coins of Cyzicus, and from a coin of Cyzicus of year XI (Pl. XII. 5) it is clear that an ornamented dais is intended to be represented.

V. ANTIOCH<sup>1</sup>

## M

## (a) With head of Justin II

See Sab., i, p. 225, No. 4, Pl. XXI. 4. The *obr.* has the head of Justin II facing, holding globe on which is Victory (like the corresponding K coin, *infra*). The coin described by Sabatier is of year 2.

<sup>1</sup> Justin II's coins of this mint show a variation of the ordinary type on the *obr.* and the *obr.* legends are generally blundered. A border of dots sometimes takes the place of the ordinary reel border.

No.	Weight	Metal and Size	Obverse	Reverse	Date
			(β) With figures of Justin II and Sophia		
			DNIVSTI NVSPP AVC (usually blundered or unintelligible). Justin II (on l.) and Sophia (on r.) nimbate, and wearing tall head-dresses and long drapery, seated facing on double throne. They support between them globe surmounted by a smaller globe and a long cross. Justin holds in r. sceptre with globular top; Sophia holds a similar <sup>1</sup> sceptre in l.	M on l., A N N O above, cross; in ex., ΤΗΕΥΡ	
193	234	Æ 1.3	(VNΣAPT SPST . .) <sup>2</sup> (border of dots) [de Salis gift]	On r., ΙΙ; beneath, Β ΙΙΙ (border of dots) [Pl. XII. 7.]	5= 569/70
194	223.2	Æ 1.2	(NTAPΣΣ VNΥΓST) (border of dots) [Purchased, 1904]	On r., ϠΙ; beneath, Β (border of dots)	6= 570/1
195	199.6	Æ 1.2	(Inscr. as No. 194?) [Purchased, 1904]	On r., ϠΙ; beneath, Γ	6= 570/1
196	210.7	Æ 1.15	(Inscr. as No. 194) [Procured in Syria and presented by Mr. J. S. Agnew, 1906]	On r., ϠΙ (larger than on No. 195); beneath, Γ	6= 570/1
197	203.5	Æ 1.3	(VNTAC . . ΤΑΜ . ϣΑ) (border of dots)	On r., ϣ; beneath, Γ ΙΙ (border of dots)	7= 571/2

<sup>1</sup> Contrast the description of No. 28, *supra*. The foot-rest is here represented only by the line of the exergue.

<sup>2</sup> These blundered and unintelligible legends must have been engraved by workmen ignorant of Latin. In most cases letters seem to have been arbitrarily inserted without meaning and without attempt to adumbrate the forms of the original inscription. The only element that remains nearly constant is VN=DN (*dominus noster*). It is not easy—nor perhaps very important—to reproduce the exact forms that occur in these barbarous legends. On most of Justin's coins (Constantinople, &c.) the D is badly formed (sometimes becoming nearly O) or is placed sideways. This D has given rise to V.

<sup>1</sup> On the legend see Introd., *supra*, § 2, 'Justin II'.

<sup>2</sup> The I is here both the mark of value (10) and the initial of the Emperor's name. Pinder and Friedl., *Münzen Justinians*, p. 50, cite Corippus. *In laudem Iustini*, i. 353-6, where the *sanctum Iota* of Justin's name is mentioned. So also in the same poem (ii. 139 and 140; cp. Bury, *Hist. Later Rom. Emp.*, ii, p. 70) it is said that the Emperor raised on a shield at his coronation *stetit ut sua rectus littera*. For other I coins see p. 101.

261	242.	Æ 1.3	[Purchased, 1904]		10= 574/5
			Double-struck		

<sup>1</sup> The € and C are not very distinct: cp. a specimen referred to by de Saulcy (*Essai*, p. 25), who attributes it to Cherson, but the *obv.* very decidedly resembles the *obv.* of Justin's African coins. de Saulcy reads the letter on r. as €; if it could be read O we should have an intelligible monogram of the name of Justin.

<sup>2</sup> An acclamation for the long life of the Emperor and Empress—*Iustino et Sophiae vita*. Cp. *Vita tibi, Felices vivatis, Vivas in Christo*, &c., of the inscriptions, and see art. 'Acclamations' in Cabrol, *Dict. d'arch. chr.* It is doubtful whether VITA occurs on the coins earlier than the reign of Justin II; cp. note on p. 24, note 3, *supra*. At the coronation of Justin II, according to Corippus, *In laud. Iustini*, ii. 167-9; cp. l.310.

Laudibus innumeris regnantum nomina tollunt.

Iustino vitam ter centum vocibus optant.

Augustae totidem Sophiae plebs tota reclamant.

The usual formula of the πολυχρόνιον was εἰς πολλὰ ἔτη 'qua acclamatione mirum quam Graeci delectati fuerint: hinc nihil crebrius apud illos quam illa πολυχρονιάζειν, πολυχρόνισμα, πολυχρόνιον' (Comm. in Codin., *De Off.*, cap. xiv, p. 163, ed. Bonn). Such acclamations were used at the coronation of an Emperor and Prince; at the imperial table (Cod., cap. vii, p. 55, Bonn); at the Christmas Day service attended by the Emperor: ψάλλουσιν οἱ ψάλται τὸ πολυχρόνιον (Cod., cap. vi, p. 52), &c.

290	34.	A .65	[de Salis gift]	[Pl. XIII. 15.]	

<sup>1</sup> The bracteate-like fabric and prominent relief of these gold coins prove that they were struck in Italy, and I am inclined to regard them as Imperial issues of the Ravenna (possibly the Roman) mint. That there was an Imperial mint for gold coins in Italy is in itself probable, and at Ravenna at the end of the sixth century we find mentions of the *scrinium auræ massæ* and of the *monetarii auri* (Diehl, *L'Exarchat de Ravenne*, p. 164). The exarch was liberally supplied from the Imperial treasury at Constantinople. Thus, in A.D. 577, 3,000 pounds of gold were sent to him (Diehl, p. 200).

COINS WITH THE NAME OF JUSTIN II NOT STRUCK AT THE  
IMPERIAL MINTS.

GOLD.—*Lombardic Imitations* (?). ‘Solidi’ of ruder work and more blundered than those described *supra* under ‘Ravenna’. ‘Tremisses’ of ruder work, especially on the *rev.*, than those described *supra* under ‘Ravenna’.

*Gaulish Imitations*.—See Babelon, *Traité*, i, p. 540.

## TIBERIUS II CONSTANTINUS

CAESAR (under Justin II), DECEMBER, A. D. 574—SEPTEMBER, 578.

AUGUSTUS AND SOLE RULER, 26 SEPT.<sup>1</sup>, A. D. 578—13 AUGUST, 582.

Mints = I. Constantinople; II. Thessalonica; III. Nicomedia; IV. Cyzicus; V. Antioch; VI. Alexandria; VII. Carthage; VIII. Rome; IX. Ravenna.

No.	Weight	Metal and Size	Obverse	Reverse	Date
I. CONSTANTINOPLE					
Gold Medallions					
<p>Tiberius II sent as presents to Chilperic, king of the Franks, gold coins each weighing a pound. On the <i>obv.</i> was the inscription TIBERII CONSTANTINI PERPETVI AVGVSTI and the image of the Emperor; on the <i>rev.</i> GLORIA ROMANORVM and a chariot and charioteer. These coins were shown by the king to Gregory of Tours (<i>Hist. Franc.</i>, vi, 2), but are not now known to exist. In general appearance they must have resembled the large gold medallion of Justinian I described <i>supra</i>, p. 25. As to gold medallions of this kind sent by emperors to barbarian princes, see Babelon in <i>Rev. num.</i>, 1906, pp. 185-9.</p>					
Solidus					
OM TIB CONS TAN TPPAVI Bust of Tiberius II facing, wearing crown (with circular orna- ment in front and surmounted by cross) and armour; in r., globus cr.; l. holds shield with horseman device.			VICTORI AAVCC Cross potent on four steps; in ex., CO NOB <sup>2</sup>		
1	67.8	A' .8	[Purchased, 1904]	A at end of inscr.	

<sup>1</sup> Justin II died 5 October, 578, after inaugurating Tiberius as Emperor in the previous month.

<sup>2</sup> Most specimens of this type are of very careless work on the *obv.*, but in spite of this they are probably of the Imperial mint; at any rate they have not the unmistakable fabric of Italy. This type of the solidus was probably issued in the first few months of the reign, if we may judge by comparing the *obv.* type of the Æ M coins (*infra*, No. 18) struck at Constantinople in year '4' (Sept.-Nov. A. D. 578).

Silver					
A silver 'medallion' (of Constantinople?), <i>rev.</i> ✠, is figured in Photiades <i>Cat.</i> , Pl. I, No. 225. See also under 'Carthage' and 'Ravenna' <i>infra</i> .					
M					
			OM TIB CON ( <i>sic</i> ) TANTSPPAV Bust of Tiberius II facing, wearing crown (sur- mounted by cross) and armour; in r., globus cr.; l. holds shield with horse- man device. (Cp. the solidus <i>supra</i> , first type, Nos. 1-9).	M on l., A N N O above, ✠ in ex., CON	

cp. especially the diptychs of Anastasius (Diehl, *Justinien*, p. 255); Magnus (*ibid.*, p. 111); Areobindus (*ibid.*, p. 453); Boethius (Daremberg and Saglio, i, p. 1478).

This type of the solidus was probably struck some time between December, 578, and November, 579, because a similar *obr.* begins to appear on the bronze coins of Constantinople and provincial mints in year '5' = 578/9. The type commemorates the first consulship of Tiberius II; cp. Pauly-Wissowa, art. 'Consul', p. 1137.

<sup>1</sup> Tiberius II dates his 'reign' from his creation (under Justin II) as Caesar in December, 574; cp. Du Cange, *Gloss.*, vol. vii, p. 155 (Diss. de num. § xxiii). Year '4' therefore corresponds to December, 577–November, 578. As he did not become *Emperor* till September, 578, the exact date of the present specimen is doubtless September, October, or November of A.D. 578. In fabric, and in the details of the *rev.*, this coin closely resembles the Constantinople M coin of Justin II struck A.D. 576/7 (=year 12); *supra*, p. 82, No. 81. There is stated (*Rev. belge*, 1862, p. 184) to be a Constantinopolitan coin with the date 'year 1'. On this date see note, p. 126, *infra*.

<sup>2</sup> On the later coins (year 7, &c.) the cross forms the top of the sceptre.

<sup>3</sup> A circle with a pellet in the centre, probably a jewel. On some specimens it seems to form a globus on which the cross rests; cp. the *rev.* of the semissis *supra*, No. 12.

<sup>1</sup> Nos. 20-26 are of fairly good work on the *obv.* and are struck on broad, spread flans; evidently an effort was made at the Constantinople mint (and some of the provincial mints) to give éclat to the new emperor's assumption of the consulate in 'year 5'. No. 27 was probably struck at the end of 'year 5', and shows (like the coins that follow) a change for the worse. The *obv.* work is much coarser, the fabric thicker, the module usually smaller, and the weight considerably diminished.

<sup>2</sup> Year 6 is represented in Photiades *Cat.*, No. 227.

60	86.	Æ .8	[Purchased, 1904]	On r., U [Pl. XV. 2.]	5= 578/9

<sup>1</sup> This specimen was formerly in the Soleirol collection, and was figured in de Sauley, *Ess.*, Pl. III. 10. It was bought by the Museum of MM. Rollin.

<sup>2</sup> This *obv.* type differs somewhat from those that follow. It is copied from an *obv.* of Justin II and Sophia, but curiously enough not from the *obv.* used under Justin at Thessalonica, but from one that appeared on the coins of Antioch; Pl. XII. 10. Other coins (with *obv.* like No. 60, *infra*) have year III (Sab., No. 41; *Mém. soc. d'arch. St. Pét.*, iv (1850), p. 305; Photiades *Cat.*, No. 237). Sabatier, No. 28 (= *Mém. soc. d'arch. St. Pét.*, iv (1850), p. 304), describes another piece with year II and with *obv.* Bust of Tiberius II (alone) facing. Does the coin really belong to the Thessalonica mint, and is Sabatier's reading TES correct? On the date I, see *infra*, p. 126.

## DATES ON THE COINS OF TIBERIUS II.

On the dated coins bearing the name of Tiberius II we find marked the years (ANNO) 1-8 inclusive. [At Antioch on the M coins there is an exceptional year '9', referred to below.] As already remarked under 'Constantinople', *supra*, p. 108, note 1, the years 5-8 cannot have been reckoned from Tiberius's accession to the Empire—he reigned only about four years—but are calculated from his Caesarship, which began in Dec., A.D. 574, under Justin II. Year 5, therefore, corresponds to Dec., A.D. 578-Nov., 579; year 6 to Dec., 579-Nov., 580, and so on.

It does not appear to have been sufficiently observed that a complication arises when—as at Antioch—we find the whole series of years 1 to 8. At first sight the coins marked 1, 2, 3, 4 would seem to belong to the years of Tiberius's Caesarship (under Justin II), while those marked 5, 6, 7, 8 would be the pieces struck when he became sole ruler. But there are considerable difficulties in supposing that Tiberius II struck coins during his Caesarship, because (i) on coins of years 1-4 he is called *Augustus* (not Caesar); (ii) it can be proved (from extant dated coins) that during the Caesarship of Tiberius the various mints were issuing money in the name of Justin II; (iii) at Antioch, coins marked 1, 2, 3, and 4 represent Tiberius on the *obv.* in the character of Consul, a dignity which there is every reason to suppose he did not assume till after he became Emperor, i.e. in his regnal year '5'=A.D. 578/9.

If then the coins of years 1-3 (or 4) were not struck by Tiberius as Caesar, they must, in some way, be compressed into the period of his Imperial rule.

The coins may best be studied at the mint of ANTIOCH, where we find not only the whole series 1-8, but curious variations in the *obv.* types. Thus years 1, 2, 3, 4 have the 'Consular' *obv.* But of year 4 there is also an 'Imperial' *obv.* (Emperor holding globus). Of year 5 there are both Consular and Imperial obverses. (So also in year 7.) Year 8 has the Consular type. There is thus (apparently) an Imperial-type issue running side by side with a Consular-type issue, or rather side by side with two Consular-type series.

The dates on the 'Imperial' series are clearly regnal, dated from the Caesarship. (Year '4' is the *earliest* date found on these 'Imperial' types.)

<sup>1</sup> The *obv.* is of somewhat delicate work and in rather high relief.

The dates on the 'Consular' series must be (as regards 5-8) regnal years reckoned from the Caesarship. Years 1-4 may be *either* years of the *Consulship* issued simultaneously with the regnal coins of years 5 to 8, *or*, possibly, years 1-4 may have been issued *en bloc* at the accession of Tiberius so as to complete the series of regnal years reckoned from the Caesarship. The following table, compiled from coins in the British Museum and other sources, shows the various 'years' of which coins exist and the alternative schemes for their arrangement:—

## DATED COINS OF ANTIOCH

	<i>Obv.</i> Imperial bust		<i>Obv.</i> Consular bust
Sept.-Nov. A. D. 578	Regnal year 4	No coins	
Dec. 578-Nov. 579	Regnal year 5	Consular year 1 + Regnal year 5	
579-580	No coins	" " 2 + " " 6	
580-581	Regnal year 7	" " 3 + " " 7	
581-582	No coins	" " 4 + " " 8	

## (ALTERNATIVE ARRANGEMENT)

	<i>Obv.</i> Imperial bust		<i>Obv.</i> Consular bust
Sept.-Nov. 578	Regnal year 4	No coins	
578-579	Regnal year 5	Regnal years 1, 2, 3, 4 + Regnal year 5	
579-580	No coins	Regnal year 6	
580-581	Regnal year 7	" " 7	
581-582	No coins	" " 8	

[The year '9' found only on the M coins of Antioch—if not an engraver's error (4111 being written instead of 4111)—may have been arrived at by counting Dec. A. D. 574 when Tiberius became Caesar as a *complete* year: thus Dec. 574 would be year 1; Jan.-Dec. 575 would be year 2, and so on, yielding nine regnal years. In this case the dating in the tables given above will be slightly disturbed, but the arrangement is not substantially affected.]

At CONSTANTINOPLE (M coins) the Consular type occurs on years 5-8 inclusive. On year 4 we find the Imperial type. [According to *Rev. belge*, 1862, p. 184, there is a year '1' of the Imperial type.]

At NICOMEDIA and CYZICUS only the Consular type—not earlier than year 5—is found. (The numeral II (= 2) found here is not accompanied by the usual ANNO and perhaps does not indicate 'year 2'; cp. p. 114, note 1, *supra*.)

The case of THESSALONICA (K coins only) is peculiar. Here the Consular type, which at other mints first appears in year 5, i. e. shortly after Tiberius's accession as Emperor, is not represented at all. The *obv.*, as under Justin II and Sophia, shows the Emperor and Empress seated side by side.

Years 5-8 must here be regnal years, but the rather curious coin in the British Museum (p. 112, No. 59, *supra*) gives year '1' and Sabatier mentions year 3 (cp. note 2, p. 112, *supra*). '1' and '3' evidently belong to the sole reign of Tiberius, and not to his Caesarship, because he represents on them the Empress Anastasia as well as himself. In this case there is a double system of dating: years '1' and '3' are reckoned from his accession to the Empire, Sept. 578, and years 5-8 are reckoned from his Caesarship, Dec. 574.

## COINS WITH THE NAME OF TIBERIUS II CONSTANTINE NOT STRUCK AT THE IMPERIAL MINTS.

SILVER.—A rude imitation (Brit. Mus.) of the small *Æ* described *supra* under 'Ravenna' is probably Lombardic.

## MAURICIUS TIBERIUS

13 AUGUST, 582—22 NOVEMBER, 602 (DIED 26 OR 27 NOVEMBER)

Mints = I. Constantinople; II. Thessalonica; III. Nicomedia; IV. Cyzicus;  
 V. Antioch; VI. Alexandria; VII. Carthage; VIII. Sicily (Catina);  
 IX. Rome; X. Ravenna; XI. Cherson.

CONSTANTINA, wife of Mauricius Tiberius.

THEODOSIUS (born 584, died 602), son of Mauricius Tiberius.

(For their coins see p. 158, *infra*.)

Solidus					
			DNMAVRC TIBPP AVC Maurice Tiberius (as Consul) seated facing on throne; in upraised r., mappa; in l., cross. The Emperor wears crown with triple projections, tunic and embroidered scarf.	VICTORI AAVCC Victory in chiton and peplos standing facing; in r., long cross ending in $\frac{P}{+}$ ; in l., globus cr.; in ex., CONOB	
1	68.8 (pierced)	AV .85	[Purchased, 1868]	At end of inscr. H <sup>1</sup> [Pl. XVII. 1.]	

<sup>1</sup> Similar specimens with H on *rev.* at Paris (=Sab., No. 1); also in Montagu *Cat.*, No. 1109. With Γ, Photiades *Cat.*, No. 238. With I, Thomsen *Cat.*, No. 330. In spite of the rude style of the *obv.* these coins are perhaps best assigned to the Constantinopolitan mint. At any rate they have not the distinctive fabric of Italian mints. Specimens with Δ and Z occurred set as jewellery in the Cyprus find of Kyrenia: see A. Sambon in *Le Musée*, iii, April, 1906, pp. 125 and 126.—In the same find occurred also, set as jewellery, four gold 'medallions' of Maurice Tiberius (*rev.* Emperor in chariot). According to M. Sambon each of these pieces weighed, with its setting, 46 grammes (more than 700 grains) and was of the value of at least six solidi. As they were apparently *cast*, and not struck, they were doubtless jewellers' ornaments, probably modelled on actual coins. On coins of Maurice Tiberius, Justinian, &c., used as jewellery in the Cyprus Treasures, see Dalton, in *Archaeologia*, vol. 60, pp. 2 and 11, and in *Burlington Magazine*, 1907, p. 356.

<sup>1</sup> D has nearly the form of O.

<sup>2</sup> In this reign the shield with horseman device so long held by the Emperor disappears from the gold coinage except from a few specimens of the Italian mints. It however reappears long afterwards, on the solidi of Constantine IV Pogonatus.

<sup>3</sup> A solidus in British Museum with *rev.* numeral B has on *obv.* DNTIBERM AVRICPPAV. Bust facing, with cross (instead of plume) on helmet; holds shield. From the peculiarities of this coin I believe that it should be classed with the Hispano-Byzantine imitations (see *infra*, 'Coins not issued at the Imperial Mints'), though it has not the letters AN usually characteristic of the obverses of those coins.

<sup>4</sup> A specimen in Rollin Collection (1903) is *without* star on *obv.* or *rev.*

<sup>5</sup> By whom it was found at 'Khoju oban, the ruins of an ancient city, thirty miles N. W. of Bokhara'. (H. Wilson and J. Prinsep, *Observations on Lieut. Burnes's Collection of Bactrian and other Coins*, p. 377.)

<sup>6</sup> On *obv.*, traces of inscription (VRC TIB) and plume of helmet; on *rev.*, CONOB and exergual line.

17	19.6	A .65	(AVI) [Purchased, 1904]	(VICTORIMAVRA VS) [Pl. XVII. 5.]	

<sup>1</sup> The type is copied from the *tremissis* of Justin II. The *semissis* of Tiberius II bore a cross and globe on the *rev.*

<sup>2</sup> D has often nearly the form of O, as on the *solidi* described *supra*. On No. 17 the semicircular part of b is not closed.

<sup>3</sup> *Tremisses* with *rev.* VICTORI MAVRI. Maurice (Tiberius) held the chief command in the Persian war in the reign of Tiberius II Constantine. In A.D. 581 the Romans gained a great victory at Constantina, and in the summer of 582 Maurice returned from the East. On Aug. 5 of that year he was elected Caesar by the dying Emperor and given the name of 'Tiberius'. He succeeded to the Empire a few days later (Aug. 13) on the death of Tiberius II (Bury, *Hist.*, ii, p. 82).

These *tremisses* with the name of Maurice on the *rev.* can hardly be *earlier* than the last few days of the reign of Tiberius II. It is conceivable that their issue was ordered directly Maurice was elected Caesar, the name on the *obv.* being that of the Emperor Tiberius II. On the other hand, it seems to me a preferable supposition that they were issued by Maurice himself after he became Emperor. The reasons are: (i) On the *rev.* Maurice is called 'Augustus', and not 'Caesar'. (ii) There are some divergences of

style and lettering between these tremisses and the corresponding coins of Tiberius II (p. 107, Nos. 14-17, *supra*), e.g. we find on the *obv.* ON (=DN) instead of the **OM** characteristic of the coins of Tiberius II. (iii) On the *obv.* the Imperial personage represented is called 'Tiberius' (only). It has been assumed by Sabatier and others that this must mean Tiberius II, but that Emperor on the *obv.* of his coins is accustomed (with rare exceptions) to style himself 'Tiberius Constantinus', or 'Constantinus' on the *obv.* and 'Tiberius' on the *rev.*; see especially the tremisses (*supra*, p. 107, No. 14, &c.) with *obv.* **COSTANTINVS**, *rev.* **VICTORIA TIBERI**. (iv) Phocas the Emperor who succeeded Maurice had the same legend **VICTORIA (FOCAS)**, and presumably imitated the then current coins of his predecessor. The 'Tiberius' mentioned on the *obv.* of our tremisses I take to be Maurice, who uses his new name 'Tiberius' on the *obv.* (corresponding to the 'Constantinus' of Tiberius II) and his original name 'Maurice' on the *rev.*, **VICTORIA MAVRI**, corresponding to the **VICTORIA TIBERI**.

<sup>1</sup> The *obv.* is in nearly every respect a reproduction of the Antioch *obv.* of Tiberius II Constantine, the legend being again blundered though less grossly (MAΥΓI = MAΥRI or MAΥPI: CN̄P apparently = Τb.P.P. (i.e. Perpetuus).

<sup>2</sup> In contrast with the M found on the corresponding coins of Tiberius Constantine. In Windisch-Grätz *Cat.*, No. 171, M of year IIII is described of Maurice Tiberius. Is not this coin, possibly, of Tiberius Constantine?

<sup>1</sup> This specimen is somewhat worn, but the weight is very light compared with the K coins of Ravenna. S S awaits explanation. The letters cannot be the mark of value, nor do they seem to indicate a date or officina. Perhaps they refer in some way to the type, which is a peculiar variety (e. g. *Signum Salutis*). Or the letters may conceivably relate to the official or board of officials under whose immediate responsibility the coin was issued (e. g. *Scrinium suburbicarium*, mentioned in Diehl, *L'Évêché de Ravenne*, pp. 163, 164).

<sup>2</sup> Only the plume or crest of the helmet is represented.

293	10.2	Æ .55	[D]NTEODO SIVSP PA Bust of Theodosius facing, wearing helmet (with plume) and armour; border of dots.	AME NITA within border SDEI of dots; whole in wreath. <sup>1</sup>	
			[de Salis gift]	(Pellet over M) [Pl. XX. 2.]	
			DNTEODO SIVSPPA Bust of Theodosius facing, wearing helmet (with circular ornament and triple device) and armour; border of dots.	Long cross, on l. of which male bust (Maurice Tiberius) wearing helmet (with triple device) and armour; on r., female bust (Constantina) wearing tall head-dress and drapery; in field, r. and l., small cross; in ex., ACTI, i. e. <i>Augusti</i> ; border of dots. <sup>2</sup>	
294	12.3	Æ .55	[Purchased, 1904]	[Pl. XX. 3.]	
295	11.5	Æ .55		(On r. and l., pellet instead of cross)	

<sup>1</sup> Cp. Penon, *Rev. belge*, 1857, p. 14. Sabatier (ii, p. 41, No. 5) assigns this coin and those here described *infra* to the Emperor Theodosius III of Adramyrium, A. D. 716-717. But as Penon and Duchalais have already pointed out the coins in style and types incontestably belong to the sixth or early seventh century (cp. Æ of Carthage, of Maurice Tiberius and previous emperors, with our No. 293; with Nos. 294, 295 cp. the Æ of Heraclius I, *rev.* Heraclius II and Martina in British Museum, 'Carthage,' *infra*); they can only belong, therefore, to Theodosius, the son of Maurice Tiberius.—*Amoenitas* seems to have its classical sense—'voluptas quae ex amoenis rebus percipitur,' as in *amoenitates studiorum quaerere* (Pliny, *praef. Nat. Hist.*); *uxor mea, mea amoenitas* (Plautus). In mediaeval Latin *amoenitas* has the technical sense of a 'pleasance' or *pleasure-ground* (see Du Cange, s.v.).

For a silver coin ascribed to Theodosius with *rev.*  $\frac{N}{CC} \frac{M}{CC}$  see *Rev. num.*, xviii, p. 211, and Sab., ii, p. 42, No. 6.

<sup>2</sup> Cp. Sab., ii, p. 42, No. 8 ('Theodosius III of Adramyrium'); C. Penon in *Rev. belge*, 1857, p. 18 f. Penon, who published a specimen of this coin, rightly assigned it to the time of Theodosius, son of Maurice Tiberius, but his identification of the busts on the *rev.* as the infant son (otherwise unknown to history) and the wife of Theodosius is very improbable. The marriage of Theodosius—his wife was the daughter of Germanus—only took place in A. D. 601-602, and it may be further noted that these busts are inscribed *Augusti* (cp. AVC, AVC on the Æ *supra*, No. 291). The simplest explanation is to regard the bust on the *obv.* as that of Theodosius and the two busts on the *rev.* as those of Maurice Tiberius and Constantina the Empress. The very youthful appearance of the busts on the *rev.* is probably not intentional, but due to the unskilfulness of the engraver.

COINS WITH THE NAME OF MAURICE TIBERIUS NOT ISSUED  
AT THE IMPERIAL MINTS.

LOMBARD IMITATIONS.—Chiefly *tremisses*, some very rude. There are also *silver* coins, type CN in wreath, which are probably Lombardic. Also a series of *solidi* classed by de Salis as *Hispano-Byzantine*. Some of these are of unusually *small* module and of *thick* fabric, and are characterized on the *obv.* by the letters AN followed by a numeral (A, B, Γ, &c.). Montagu *Cat.*, No. 1111, is a specimen of the solidus of small module. Montagu *Cat.*, No. 1108, is a coin of larger module, and is in that catalogue mistakenly attributed to 'Tiberius Constantine, Maurice Tiberius, and Anastasia'.

On the *Merovingian* imitations, see Prou, *Cat. des monn. Mérov.*, p. xxiii, &c., p. 300, &c.; de Belfort, *Monn. Mérov.*; Babelon, *Traité*, i, p. 540; Keary, *Coinages of West. Eur.*, p. 71 f.

with a similar *rev.* type (wt. about 215 grains) is published by A. Tauber in *Num. Zeit.*, iv, p. 31. I have not seen the original, but the engraving (p. 31) and some other circumstances tend to suggest some doubt as to the authenticity of this piece. Sabatier, i, p. 253, No. 7, also publishes a silver coin with the same types as the tremissis (correctly

described as of silver?); also a silver coin with *rev.*  $\overline{\text{TORA}}$ : Sab., i, p. 254, No. 9;

de Sauley, p. 46, Pl. V. 4, probably of Heraclius I (Carthage): see on this, Barthélemy, *Rev. num.*, 1857, p. 261.

<sup>1</sup> On well-preserved specimens (like No. 36) the Empress is seen to wear pendent ornaments over the breast, and the edge of the dress is dotted as if fringe or embroidery were indicated.

47	184.7	Æ 1.25	(Inscr. incomplete) [de Salis gift]	On r., 4 II in ex., [C]ONE	8= 609/10
			(Restruck on M coin of Maurice Tiberius: on <i>obv.</i> , remains of .AVRICITI βERIPPAVC and traces of helmet; on <i>rev.</i> , ANNO and traces of M) <sup>3</sup>		

<sup>1</sup> This year (here slightly obscure) occurs in Thomsen *Cat.*, No. 412.

<sup>2</sup> With Γ, Pichler, *Repertorium*, p. 229.

<sup>3</sup> On the *rev.* of this specimen, owing to the restriking, the denomination appears as XXX instead of XXXX. According to Photiades *Cat.*, No. 260, and Windisch-Grätz *Cat.*, No. 181, there was a distinct denomination XXX at the Constantinople mint of years 4 and 5. No such coins occur in the British Museum. The denomination XXX was represented on coins of Tiberius II Constantine.

70	190.	Æ 1.3	[Presented by Mr. Rohde Hawkins, 1848]	In ex., NIKOB; on r., I (Double-struck) [Pl. XXI. 5.]	1= 602/3

<sup>1</sup> A specimen of year 5 is published in *Mém. arch. soc. St. Pét.*, iv (1850), p. 315; cp. Sab., No. 32, Pl. 27. 15.

<sup>2</sup> A corresponding coin of Cyzicus has NPERAV (or NPEPAV); at Antioch we find NEPEAV (cp. blundered legend on XX coins of Thessalonica). de Saulcy (*Essai*, p. 50) suggests that the exclamation *Ne Pereat* is intended, but adds: 'Voilà une interprétation qui rappelle quelque peu le P. Hardouin et pour la défense de laquelle je ne suis vraiment pas disposé à rompre des lances.' Probably the legends are only blundered. Such blunders would not be surprising at Antioch, though somewhat strange at Cyzicus.

VI. ALEXANDRIA					
IB <sup>2</sup>					
Inscr. Bust of Phocas r., beardless, wearing diadem, paludamentum and cuirass. (Type, more or less barbarous.)					
123	41.6	Æ .55	DNISI IVPPAV	In ex., $\Delta\Lambda\epsilon\text{I}$ [Purchased, 1904] [Pl. XXII. 7.]	
124	55.7	Æ .65	(DN I?) AVC NSSP PA	In ex., $\Delta\Lambda\epsilon[\text{I} ?]$	

<sup>1</sup> Year  $\mathfrak{C}$  (5) in *Mém. soc. arch. St. Pét.*, iv (1850), p. 316, No. 57.

<sup>2</sup> These coins are so barbarous that it is difficult to believe that they were struck at the Imperial mint. Yet they appear to belong to the time of Phocas, because (i) the Alexandrian coins of his predecessors (Justinian I, Justin II, Tiberius Constantine, and Maurice Tiberius) are of different fabric, size, and lettering, and (ii) the Alexandrian coins of his successor Heraclius present new *obv.* types. None of the specimens in the British Museum show the inscr. DNFOCAS recorded by Sab., i, p. 257, No. 43. On one or two specimens the legend rather suggests the name Justinus (II), but the coins cannot be with certainty assigned to his reign.

## HERACLIUS AND FAMILY

A. D. 610-641.

**HERACLIUS**, crowned 5 Oct. 610; died 11 Feb. 641.<sup>1</sup>

**HERACLIUS CONSTANTINUS**, son of Heraclius (by his first wife Eudocia, who died August, 612), born 3 May, 612; crowned 22 Jan. 613; died 24 May, 641.

**HERACLONAS** (Heraclius), son of Heraclius (by his second wife Martina), born A. D. 615<sup>2</sup>; crowned Augustus 4 July, 638.

**MARTINA**, second wife of Heraclius; married A. D. 614.

Mints = I. Constantinople; II. Thessalonica; III. Nicomedia; IV. Cyzicus; V. Isaura; VI. Cyprus; VII. Antioch; VIII. Alexandria; IX. Carthage; X. Sicily; XI. Rome; XII. Ravenna.

I. CONSTANTINOPLE					
Solidus					
A. D. 610					
1	65.7	A .85	ΘNHERACLI QSPPA VC Bust of Heraclius facing, with pointed beard; wears crown (with cross), paludamentum and cuirass; holds in r. globus cr.	VICTORIA AVCQ Victory standing facing, holding in r. long cross with $\text{P}$ ; and in l. globus cr.; in ex., CONOB	At end of inser., $\text{I}\Omega^3$ [Pl. XXIII. 1.]

<sup>1</sup> On the date, A. J. Butler, *Arab Conquest of Egypt*, p. 300.

<sup>2</sup> So Bury, *Hist. Rom. Emp.*, ii, p. 282: according to Pernice (*L'Imp. Eraclio*, p. 294) in A.D. 626.

<sup>3</sup> Cp. Sab., No. 1. The usual *rev.* of Heraclius is the cross on steps. This *rev.* is the same as that of the solidi of Phocas, while the *obv.* head is scarcely to be distinguished from the head of Phocas, except by the inscription. It is hardly rash to conjecture that the dies for this solidus were engraved before Heraclius became Emperor. The die-engraver, who had had no 'sitting' and received no directions from the future Emperor, prepared the designs as best he could, on the model of the current solidi of Phocas.

<sup>1</sup> This coinage probably began about the time of the coronation of the infant Heraclius Constantine.

<sup>2</sup> Sometimes with η form.

<sup>3</sup> The *obv.* type and legend are almost exactly identical with those on a seal of Heraclius (*rev.* the Virgin standing between two crosses) described by Schlumberger, *Mélanges d'arch. byz.*, i, p. 261. Many solidi of this type were found on the site of the Asklepion at Athens; see Svoronos in *Journ. int. d'arch. num.*, 1904, p. 151 f.

<sup>4</sup> Cp. OBXX on solidi of Tiberius II Constantine and Phocas; note, p. 164, *supra* (Phocas). Cp. No. 25, *infra*.

<sup>5</sup> The solidi with the small bust of Heraclius are exceptionally neat on the *obv.* On these pieces the side hair of the Emperor is arranged to curve inwards, and not to point outwards as on most other specimens.

<sup>1</sup> With  $\Theta$ , *Journ. int. d'arch. num.*, 1904, p. 152, No. 36 (Svoronos).

<sup>2</sup> With IB, *Journ. int. d'arch. num.*, 1904, p. 152, No. 38 (Svoronos).

<sup>3</sup> The long beard and moustache worn by Heraclius on these coins first appears on dated  $\mathcal{A}$  of year 20 (= A.D. 629/30). The issue of these gold pieces may, therefore, have begun in that year. At Ravenna a similar group of three occurs on the M coins, A.D. 631/2 to 639/40. On the bronze M coins of Constantinople the group of Heraclius, Heraclius Constantine, and Heraclonas is found in year 30, i.e. 639/40 A.D. (Cp. Pernice, *L'Imperatore Eraclio*, pp. 294, 295.)

80	68.2	AV .75	[Purchased, 1904]	Like No. 79, but on r., B (beneath, CON OBA <sup>2</sup> )	

<sup>1</sup> A specimen with  $\epsilon$  in field r. in a private collection, August, 1905.

<sup>2</sup> The solidi, Nos. 50-80, present many varieties on the *rev.* It is probable that most (if not all) of these varieties were represented at *each* of the different officinae.

84	32.5	AV .75	[Colonel de Bosset] (A for A; ends AVI) Inscr. Bust of Hera- clius r., beardless, wearing diadem, paludamentum and cuirass. (Thin fabric; rude work.)	(A) At end of inscr., I VICTORIAAVÇY Globus surmounted by cross potent.	
85	33.8	AV .65	DNHERACII NSTP PAV	At end of inscr., € [Purchased, 1864]	

Although, for convenience of reference, the solidi in this *Catalogue* are arranged under officinae (all coins of officina A being placed together, followed by those of officinae B, Γ, &c.), another instructive arrangement might be made by grouping each set of varieties together without regard to the officinae. Thus, the specimens in the British Museum might be classed as follows:—

1. Monogram (P) and A at officinae A, Γ, Δ, Ε, Σ, Ζ, Η
2. " " " " " " B, Ζ, Η [I in private coll.]
3. " " " " " " Σ, Η, Ι
4. " " " " " " A, B, Γ, Σ
5. " " " " " " A, B, Δ, Ε, Ζ, Η, Ι
6. " " " " K at officina Ε
7. Monogram only " at officinae Ε, Σ, Ζ

(The exact chronological order in which these varieties appeared can hardly be determined.)

<sup>1</sup> There are no data for determining precisely when the issue of the semissis and tremissis took place. Nos. 85-90 and No. 95 are, obviously, in each denomination the latest issued.

<sup>2</sup> These legends share some of the barbarity of the *obv.* type. From No. 85 it would seem that the legend intended was Dn. Heracli(us) [et?] [Co]nst[antinus] or Dn. Heraclius Constantinus. On other coins we can read Dn. Heraclius T. PP. Au. Svoronos (*Journ. int. d'arch. num.*, 1904, pp. 149, 152) assigns these pieces to Heraclius Constantine. This may possibly be correct, but on the semissis and tremissis (which are always highly conventional) an Emperor who is on other denominations bearded is often represented as beardless. The absence of the beard does not necessarily, therefore, exclude Heraclius I, and it seems to me a little doubtful whether Heraclius Constantine would be represented *alone*. I have described the bust as Heraclius (I). A good many specimens occurred in the finds at Athens (*Journ. int. d'arch. num.*, 1904, p. 152 f.).

109	145.	Æ 1.1	(Helmet has plume instead of cross) [Purchased, 1904]	On r., I; beneath, Γ	1= 610/11

<sup>1</sup> Two coins of the same types as Nos. 96-107 are described, *infra*, under Ravenna, to which mint I have assigned them on account of their spread fabric; also because the *obv.* heads resemble those on some of the *solidi* of Ravenna; and because T and V occur (as on the Ravenna coins) instead of T and Y found at Constantinople. Also the *rev.* has a wreath-like border.

<sup>2</sup> Sabatier possessed six examples of this coin purchased at Tiflis (*Mém. soc. arch. St. Pé.*, 1851, p. 308, No. 40). For another type (*rev.*, cross on globus between two palm-branches), see Sab., i, p. 285, No. 108, and *Mém. soc. arch. St. Pé.*, 1851, p. 308, No. 41.

115	162.5	Æ 1.25	(ONh &c., partly obscure)  (Heraclius and Heraclius Constantine) Inscr. <sup>2</sup> Heraclius (on l.), bearded, and Heraclius Constan- tine (shorter figure on r.), beardless, standing facing; between their heads, cross. Each wears long robes, crown with cross, and holds in r., globus cr.	On r., II ; beneath, Ε I [Purchased, 1904]  M on l., Δ N N O above, ✕ in ex., CON	3= 612/13
116	152.6	Æ 1.2	ddNNhER.... ΕΤΗ ERA..... (Restruck)	On r., II ; beneath, Δ I	3= 612/13

<sup>1</sup> A specimen of year III is restruck on a coin of Phocas, *Revue belge*, 1855, p. 406.

<sup>2</sup> The inscription is often obscure or incomplete owing to the restriking of the coins. I have generally only recorded the letters about which there can be no doubt.

No.	Weight	Metal and Size	Obverse	Reverse	Date
117	156.5	Æ 1.2	δδNNhER.... ..CONSTPPA	On r., I <sup>1</sup> ; beneath, Δ [Purchased, 1904] (Restruck)	3= 612/13

168	94.2	Æ 1.	(Letters in field not visible) [Lynch, 1856] [Pl. XXIV. 7.]	On r., X; beneath,  X [4?] (above,   (Restruck?)	26 ?= 635/6

<sup>1</sup> A similar coin is assigned by Sabatier (i, p. 284, No. 105, Pl. XXXI. 5), but on no sure grounds, to Heraclius and *Martina*. The monogram (the name of Heraclius?) is curious: cp. the  and  form on the early Arab imitations of Heraclius and Constans II struck at Damascus and Emesa (Brit. Mus. *Cat. Or. Coins, Add. ix*, Pl. I).

			(Restruck?)		
221	102.	Æ .95	[Purchased, 1904]	On r., [ <b>X</b> ]; beneath, B <b>ϣI</b> <b>II</b>	19= 628/9

<sup>1</sup> This figure on l. might possibly be Heraclonas, as it is not distinguishable from the figure of Heraclius Constantine on r. I have called it Martina because at the Constantinople mint, about the same period, we have an undoubted figure of Martina forming one of a similar group of three. At Nicomedia (*infra*) we find an undoubted Martina (No. 248), though on other specimens the figure resembles Heraclius Constantine.

273	56.3	Æ 1.05	(Details somewhat obscure) [Pl. XXVI. 5.]	On r., X; beneath, Γ II (other details obscure) [de Salis gift]	15? <sup>4</sup> = 624/5
Restruck, clipped, and countermarked on rev. J (the countermark of Constans II): from the Cyprus find [Warren in <i>N. C.</i> , 1861, p. 54, No. 12; Pl. II. 2 = Sab., Pl. XXXV. 22; not correctly engraved]. <sup>4</sup>					

<sup>1</sup> The mint-place was doubtless Constantia (the successor of Salamis), the chief city of the island. In A.D. 647, under Constans II, Cyprus was ravaged by the Saracen commander Muavia, and Constantia was destroyed (Oberhummer, art. 'Constantia' in Pauly-Wissowa).

<sup>2</sup> Martina's crown is distinguished by two hoops or arches.

<sup>3</sup> For a coin of year 15 (?) see No. 273, *infra*.

<sup>4</sup> Warren (loc. cit., p. 54) assigns this and the two following coins to the reign

M					
			Inscr. Busts of Hera- clius, bearded (on l.), and Heraclius Constantine (on r.) facing. Heraclius wears crown with globus cr. and armour?; his son wears crown with cross and armour? Above, cross.	M on l., A N N O above, ✱ in ex., SEΨSY	
274a	192.2	Æ 1.25	СΘΙΝΗh.. ....ϣС..	On r., ϣl; beneath, A [Pl. XXVI. 6.]	7= 616/17
(Restruck)					

of Constantine IV Pogonatus with his two brothers, Heraclius and Tiberius. Year 15 of Constantine IV's reign reckoned from A.D. 654, when he was made Augustus by his father, Constans II=A.D. 668/9. But it seems to me improbable that the Cyprus mint should burst forth into activity for a single year only—A.D. 668—especially at a time when this island had come, in part at least, under the Saracenic domination. Probably Nos. 273–274 are coins of Heraclius (with Martina and Heraclius Constantine) struck in year 15 of the reign of Heraclius, but afterwards countermarked and used as his own currency by Constans II.

<sup>1</sup> The *obv.* figures are rudely represented like those on the Isaura coins described *supra*. The legends of both *obv.* and *rev.* are blundered. Sabatier's view (i. pp. 43, 278, No. 67, Pl. XXX, No. 2) that SEΨSY (or SEPSYS as he represents it) is an indication of *Ephesus* is far from probable. It is much simpler to suppose that it is a blundered reproduction of ΤΗΕΥΡΙ, and that the coins were struck at the mint of Antioch.

296	62.7	Æ .65	(No inscr.) [de Salis gift]	(B; Λ for A)	
(Three figures)					
			Three figures standing facing, namely, Heraclius (in centre), Martina <sup>1</sup> (on l.), and Heraclius Constantine (on r.). Each wears long robes and crown with cross and holds globus cr.	IB Cross potent, beneath which M; in ex., AΛEΞ	
297	141.	Æ .8	[de Salis gift]	(Cross potent resting on Δ; monogram omitted) <sup>2</sup>	
298	144.	Æ .75	[de Salis gift]		
299	141.7	Æ .75			
300	133.8	Æ .7	[Purchased, 1904]	[Pl. XXVI. 16.]	
301	102.	Æ .75	(Figure on l. short, with cross detached = Heraclius Constantine or Heraclonas?)		

<sup>1</sup> Possibly Heraclonas.

<sup>2</sup> Δ is probably (as Mr. R. S. Poole long ago suggested in *N. C.*, xvi, p. 121) the basis or steps of the cross misunderstood; cp. No. 288, *supra*. I am inclined to think that M arose in the same way, the bar above being really the base or step of the cross. Poole supposed that M, no less than IB, was a mark of value (op. cit., p. 120), but probably Sabatier (cited by Poole, p. 121) is right in thinking that Δ and M have nothing to do with the value of the coins.

No.	Weight	Metal and Size	Obverse	Reverse	Date
			(Time of Heraclius? or perhaps later than Feb. A. D. 641)		
			Bust of Heraclius, facing; wears crown with globus cr. and armour; holds in r. globus cr. surmounted by palm. <sup>1</sup>	IMB	
302	150.1	Æ .8	(R. hand obscure) [de Salis gift]	Instead of M, M?; M in ex., [A]ΛΕ[Ξ?]

304	106.6	Æ .65	In field r., star	(M?) in ex., [Λ]BAΓ <sup>3</sup> [Pl. XXVI. 18.]	
305	108.5	Æ .65	[Purchased, 1904]	In ex., ABAZ	
			S <sup>4</sup>	S (6 nummia) Palm-tree with fruit.	
306	82.	Æ .7	[de Salis gift]		

<sup>1</sup> For the type, cp. Sab., ii, p. 19, No. 35, Pl. 36, 22.

<sup>2</sup> ◇BV? is probably a blundered rendering of ABA (see No. 305), ◇ being put for A as in the ΠAN and ΠON coins described, *infra*, pp. 228, 229. On a IB coin published by Kubitschek (*Num. Zeitschrift*, vol. xxix, 1897, p. 193, MΛCΠ occurs, equivalent, in Kubitschek's view (p. 195), to *Magd.*, and perhaps indicating the town of Magdolon.

<sup>3</sup> Nos. 302-5. Sabatier (i, p. 44; ii, p. 19, No. 35) assigns a coin more or less resembling Nos. 302 and 303 to the time of Constantine IV Pogonatus, but the thick fabric points to an earlier period. Moreover, the IB denomination is characteristic of Alexandria, and we cannot suppose that this mint would issue Imperial coins many years after the conquest by Amru. It is just possible, however, that some of these pieces which show signs of barbarism were issued for a short time immediately after the Saracenic conquest (in the early part of the reign of Constans II). Sabatier (i, p. 44) explained ABAZ or ABAΞ as the equivalent of Auasis or Oasis, an Egyptian city. This is highly improbable, and I regard it as (= ABA?) a blundered rendering of AΛΕΞ.

The same explanation applies to ◇BV? [= ABA?]. The *rev.* type IMB is probably derived from the three-figure coins (Nos. 297-301, *supra*, with IMB, q.v.). On ABAΞ see further Kubitschek in *Num. Zeitschrift*, xxix, 1897, p. 195.

<sup>4</sup> Nos. 306-8. Pinder and Friedlaender (*Münzen Justinians*, p. 32) are doubtless right in attributing these coins to Alexandria. They assign them to the reign of Justinian I, of whom there are S coins of another type. But it seems to me that the thick fabric is more suited to the time of Heraclius, of whom, also, we have S coins of another type. (In the intervening reigns the S denomination does not seem to have been employed at

Alexandria.) In either case there is a certain difficulty. If we attribute the coins to Justinian, we have another series of **S** pieces weighing only about 50 grains; if they are attributed to Heraclius, we have also a second series of **S** coins weighing 50 grains or less.

<sup>1</sup> A well-preserved specimen published by Sabatier in *Revue belge*, 1859, p. 311, reads δNhεRAεThεRCLIV.

<sup>2</sup> No. 315 has the thick Alexandrian fabric and an *obv.* type similar to No. 288, which is undoubtedly of Alexandria. The other pieces here described are, however, of thin fabric. ΠΑΝ or ΠΟΝ gives the name of no known Imperial mint, and may, perhaps, be a degraded form of ΛΛΕΞ (cp. the blundered coins *supra*, Nos. 303, 304; also Sab., i, p. 281). Kubitschek (*Num. Zeitschrift*, xxix, 1897, p. 195) thinks that possibly we have here the name of Panopolis (or Panephris) which may have been a mint during the siege of Alexandria by the Arabs.

N.*, 1860, p. 129, has on *obv.* CONSVΛIA (i.e. *Consuli* and numerals IA=11), and on *rev.* CONSABIA = *Consulibus*; and 11. (*Victoria consul(is)* or *consul(um)* would, however, be more naturally expected.) Compare the specimens that occurred in the Chatby (Alexandria in Egypt) find described by Dutilh in *Revue belge*, 1905, p. 158.

³ Cp. *Montagu Cat.* (Paris, 1896), No. 1118 and plate, *obv.* DNHERACΛI CONSVΛIIF, *rev.* VICTORIA CONSVΛIIF. Thick fabric, the bust on l. apparently beardless, as on our No. 338. Barthélemy (*R. N.*, 1857, p. 251) wrongly read the *obv.* of our No. 337 as DMNNERAC &c., and interpreted the legend as *Dominis nostris Eracli(is) consuli(us)*. At that time the legends ending in IA and IF were unknown. The legend is clearly equivalent to *Domino nostro Heraclio consuli*, and IB and IF must be numerals (12, 13). The *rev.* legend of No. 337 CONSABIB, unless blundered, must be equivalent to *consulibus* IB (12). Cp. No. 339 with CONSABIA. The *obv.* of No. 339 = *Domino nostro* [H]eraclio consuli and BA?

⁴ Purchased in November, 1861, from C. G. Huber, Consul-General for Austria in

Egypt. A few Roman coins and several coins of Alexandria were included in the same purchase. A similar specimen in Montagu *Cat.*, No. 1117.

<sup>1</sup> Nos. 337-40. The coins of Heraclius with consular types have been discussed by A. de Barthélemy in an interesting but not entirely satisfactory article in the *Rev. num.*, 1857, p. 247 f.; cp. *R. N.*, 1860, p. 129. Barthélemy did not recognize the Carthaginian origin of the gold coins, which, however, is hardly to be doubted in the case of our Nos. 337 and 338. Nos. 339 and 340, on the ground of their types and inscriptions, may be conveniently assigned to Carthage, though their flat fabric and crude style (on the *obv.*) differentiate them from Nos. 337 and 338. The style of the *obv.* of Nos. 339, 340 rather resembles that of the coins assigned in subsequent reigns to the mint of Rome. IA, IB, IF in the legends of the gold coins are almost certainly the numerals 11, 12, and 13, though BA on the *obv.* of Nos. 339 and 340 is hard to explain. (On the *rev.* of 339 we have IA=11.) If '11', '12', and '13' are regnal years they correspond to A.D. 620/1, 621/2, 622/3. Possibly, however, they are only the numbers of *officinae*, as '10', '13', '14', and '15' doubtless are on the gold described, p. 230 f. In spite of the appearance of *two* bearded busts on Nos. 339 and 340, I do not feel sure that these coins are necessarily later than the coins 337 and 338, which show one of the busts *beardless*. Nos. 339 and 340 are in fact highly conventional, and evidently done by an unskilful artist, and on the *rev.* of one of these coins, i.e. 339, we find IA (=11), which might seem to show that they were issued *earlier* than Nos. 337 and 338, which are inscribed IB (=12).

Unless we accept 11, 12, and 13 as regnal dates (A.D. 620-3), it will probably be best to suppose that the coins were issued *circ.* A.D. 629, when Heraclius Constantine was instituted consul (Bury, ii, p. 247 n.; cp. Barthélemy, l. c., p. 256 f.). Barthélemy regards our Nos. 339 and 340 as representing Heraclius and his son Heraclonas who was consul in A.D. 640. I prefer the simpler view that the busts are those of Heraclius and Heraclius Constantine.

<sup>2</sup> Cp. Sab., i, p. 264, Nos. 1 and 2; Barthélemy in *Rev. num.*, 1857, p. 250, No. 3, and p. 261. One specimen was procured from Tunis (*Rev. belge*, 1855, p. 407). The descriptions of similar coins with a *bearded* head seem to be erroneous. The *rev.* legend is arranged so as to form a cross, and Barthélemy has suggested that the upright limb of the cross forms I, so that the legend is VICTORIA C[onsulis?].

<i>Circ. A. D. 613?</i>					
342	9.6	Æ .5	[ERAC] ΛΙΙS Busts, beardless, of Heraclius and Heraclius Constantine, facing. Each wears armour and helmet with triple ornament and globus. Above, cross. <sup>1</sup> [Purchased, 1868]	ΑCΥ STI Cross potent on three steps. Border of dots. [Pl. XXVII. 16.]	
<i>Circ. A. D. 613?</i>					
343	10.5	Æ .55	DNERAC ΛΙΟΡΡΑΥ Bust of Heraclius, beardless, facing; wears cuirass and paludamentum and crown with globus cr. [Purchased, 1849]	Bust of Heraclius Constantine, beardless (on l.), and bust of Martina, facing; above, short cross. Heraclius Constantine wears armour and crown with cross. Martina has drapery, long hair and crown with cross; above, cross. Border of dots. [Pl. XXVII. 17.]	
344	9.1	Æ .45	[Acquired, Jan., 1853]	[Pl. XXVII. 18.]	
345	11.6	Æ .5	[L. Fraser, 1847]		
346	10.4	Æ .5	(DNERC ΛΙΟCCPP•)	[Acquired, Jan., 1853]	
347	12.7 (worn)	Æ .55	DNER ... IVSPPA Bust of Heraclius facing, as on No. 343. [Blacas, 1867] <sup>2</sup>	Busts of Heraclius Constantine and Martina facing, as on No. 343; between them, long cross; in ex., ΑCΤΙ (= <i>Augusti</i> ).	

<sup>1</sup> de Sauley (*Essai*, p. 81, Pl. VIII. 10) and Sabatier (i, p. 239, Nos. 1 and 2) attribute this type to the brief reign of Heraclius Constantine and Heraclonas (after the death of Heraclius), but it is perhaps best to suppose it to be a coin of Heraclius and Heraclius Constantine. That Heraclius can be represented without a beard is shown by the following coins and by other coins of the Carthage mint.

<sup>2</sup> With the *obv.* cp. Sab., Pl. XXIX. 16. The Æ coin attributed by Sabatier (ii, p. 42, Pl. 39, 6; Thomsen *Cat.*, No. 634) to Theodosius III is, almost certainly, a misread specimen of a coin like our No. 347.

<sup>1</sup> The attribution of Nos. 469 and 470 to Ravenna is somewhat doubtful.

COINS WITH THE NAME OF HERACLIUS NOT ISSUED AT THE  
IMPERIAL MINTS.

The imitations (chiefly Lombardic?) are mainly the *semissis* (*rev.* globus cruciger) and *tremissis* (*rev.* cross potent) with the obverses very rude and the legends blundered.

There are also (Brit. Mus.) some *solidi* (possibly Arab imitations) with *obv.* Heraclius and two sons standing facing. The *obv.* is very roughly engraved and does not appear to be of any Imperial mint. One of these has, on the *rev.*, the cross potent represented as T : cp. the early Arab imitations of the thick gold coins of Carthage where the cross is treated in the same way (*Brit. Mus. Cat. Oriental Coins*, Additions I-IV, Pl. III). In Brit. Mus. is also a solidus (acquired in 1906) which is a barbarous imitation of our No. 10, &c., *supra* (*obv.* busts of Heraclius and Heraclius Constantine. Legend blundered; *rev.*, cross potent on three steps. Legend, VICTA ΔOVNI; beneath, NONOC). The provenance is unknown.

On the *Merovingian* imitations see the works of de Belfort and Prou.

## CONSTANS II (Constantinus III)

SEPT. 641—SEPT. (?) 668

CONSTANTINUS IV POGONATUS, son of Constans II; Augustus from A.D. 654.

HERACLIUS and TIBERIUS, sons of Constans II; Caesars from A.D. 659.

Mints = I. Constantinople; [Alexandria?]; II. Carthage; III. Sicily; IV. Rome; V. Ravenna.

<sup>1</sup> The gold and silver cannot be dated with perfect exactness. The principal clues are the first appearance of Constantine IV and of Heraclius and Tiberius in company with their father, probably in A.D. 654 and 659 respectively. The dates assigned to the AV with the single bust of Constans are more conjectural. The beardless head doubtless begins in A.D. 641, when the Emperor was only eleven. In a few years (about 646?) his face displays a close beard and whiskers. Then follows the long beard type, the first appearance of which may be assigned to A.D. 651/2, as in that year Constans is represented with a long beard on the dated Æ of Constantinople. At this time he was only about twenty-one years old, and the portrait is obviously entirely conventional and closely modelled upon that of Heraclius. The Athens (Asklepieion) finds (see Svoronos, *Journ. int.*, 1904, p. 143), which may have been buried *circ.* 662, the date of the visit of Constans to Athens, include the solidi of the Emperor in conjunction with his three sons (two types).

<sup>1</sup> A great number of variations in the legend occur: see Svoronos in *Journ. int.*, 1904, p. 156 (Athens finds). The date of the earliest issue of coins of this class is not earlier than A. D. 659, when Heraclius and Tiberius became Caesars: possibly it may be later than 659, because somewhat similar Æ coins (Pl. XXXII. 13; *obv.* Constans II and Constantine IV standing facing, *rev.* Heraclius and Tiberius standing on l. and r. of M, above, cross) appear to be dated year '25', i. e. A. D. 665/6.

			(Restruck)		

<sup>1</sup> If Sab., i, p. 298, No. 15; Pl. 32, 18 is to be trusted there are coins with a similar *obv.*, but inscribed on the *rev.* ΑΝΝΟ ΙΙΙ CON. Cf. the coins, *infra*, of Constans II of Sicily, inscribed SC<sup>s</sup>. The word ΑΝΑΝΕΟ (which rather seems to have been suggested by the familiar ΑΝΝΟ that had so long appeared on the **M** coins) is followed by Υ or ς, or Σ or SS, these signs being either (as Warren has suggested, *N. C.*, 1861, p. 51 n), equivalent to Σ, or ΣΙΣ, or marking an abbreviation (so Σ or S, in ΙΝΔ<sup>s</sup> = ἰνδικτιῶνος, cp. *Byz. Zeit.*, 1905, p. 12). We have thus the word ἀνανέωσις = 'renewal', 'restoration'. Warren (loc. cit., p. 48) compares it with such imperial coin-legends as *Fel. temp. reparatio* and *Restitutor orbis*. The word has also the meaning of renovation in a religious sense as ἀνανέωσις κατὰ θεόν (Athan. ii. 245 A). This legend was first introduced by Constans II and not by Heraclius as sometimes stated (e. g. by de Sauley, *Essai*, p. 61).

			countermark $\mathfrak{E}$ <sup>3</sup>		

<sup>1</sup> The flans of the bronze coins in this reign are extraordinarily irregular. In some cases large coins of the sixth century seem to have been cut up very carelessly, with scissors, into two or three pieces and each piece to have been employed as a flan on which to strike the types of Constans II.

<sup>2</sup> This coin and other coins of Constans II marked as 'Cyprus find' were presented to the British Museum by Count de Salis. They formed part of a hoard of 512 Byzantine bronze coins of Constans II and his sons, discovered in Cyprus in 1858, and purchased at the time by the Hon. J. L. Warren (afterwards Lord De Tabley), who gave an interesting account of the hoard in the *Num. Chron.*, 1861, p. 42 ff. All these pieces bear a circular countermark containing the monogram  $\mathfrak{E}$  or  $\mathfrak{L}$  i.e. the name 'Constantinus'. This monogram is found on the coins of Constans II (e.g., Pl. XXXIV. 13), and also on those of Constantine IV (e.g. Pl. XXXVII. 21). It is further found as a countermark on a coin of Constantine IV, Pl. XXXVII. 2. It therefore seems likely that it was Constantine IV, rather than Constans II who countermarked the coins of the Cyprus hoard. Since, however, this is not quite certain, and as it is practically certain that the coins were *originally* issued by Constans II, I have described them under Constans II. Mr. Warren was inclined to think that the pieces in this hoard were struck in Cyprus itself, but it seems to me much more likely that they were the product of the Constantinople mint: some are inscribed CON, and others KWUNCTAN, which latter I take to be the mint 'Constantinople' and not (as has been suggested) the mint 'Constantia' in Cyprus, or the name of 'Constans II'. Three coins in the hoard were inscribed with the name of the Cyprus mint, year 15? Warren supposed that these were struck in A.D. 668/9 (Constantine IV). I have suggested, *supra*, p. 223, that they were issued under Heraclius and countermarked by Constans II (or Constantine IV?).

[I have seen a coin (brought to Brit. Mus., April, 1906) similar to the Cyprus hoard pieces, but not countermarked, which was stated to have been obtained from Bethlehem.]

<sup>3</sup> In Brit. Mus. are two coins of the type of No. 93, &c., but of neat fabric and with the legends on *obv.* blundered:—WTOU CON $\delta$ ; *rev.* legend blundered: in ex., CON. I am inclined to think that these are early Arab coinages of Syria.

			<p><i>Circ. A. D. 641-651</i></p> <p>(Standing figure, beardless)</p> <p>ENTØT O NI KA<sup>1</sup> M on l., A; on r., N  Constans II, beardless, standing facing, holding in r. long cross, in l. globus cr.; wears crown with cross and long robes. N  A E  above, cross. O</p>		
101	51.8	Æ .8	[Purchased, 1904]	In ex., AIW <sup>2</sup>	
102	147.4	Æ .9	(ENTØTO N I KA)	In ex., BIS [Purchased, 1904] [Pl. XXXI. 15.]	
103	85.	Æ .85		In ex., BIS	

<sup>1</sup> The *obv.* type and legend were first introduced by Heraclius, at Carthage, but there is nothing distinctively African about this series, which may be conveniently assigned to Constantinople. The earliest coins of this class must have been issued not later (and probably earlier) than the third year of Constans II, because a specimen of the full-face type (*supra*, No. 94), dated year '3' is restruck on one of these coins. The series must have come to an end in the eleventh year (= A.D. 651/2) when somewhat similar coins (with the Emperor *bearded*) were issued.

<sup>2</sup> The  $\omega$  belongs to ANANEO: see note 1, p. 266, *supra*. The numerals in the exergue of this series are curious. AI, BI, ΓI might be the dates 11, 12, 13, but AII, BII, ΓII, seem impossible dates. We may say, therefore, with confidence that I does not represent *ten*, but simply the numeral *one*. If we add the numerals in each series together, we have the following results:—

AI = 2	...
BI = 3	AII = 3
ΓI = 4	BII = 4
ΓII = 5	
qII = 8	ΔIIII = 8 and 4Γ (5 + 3) = 8.
SIII = 9	ΕIIII = 9
ζΔI = 11 ? (i.e. 6 + 4 + 1)	

If these are really dates they are doubtless regnal years, stopping short in year eleven when (as already stated) a new type was undoubtedly introduced.

An alternative theory would be to suppose that the first numeral in the exergue indicates the *officina*, while the following numerals indicate the date (thus, BII = Year II of officina B). We should thus have:—

Year I	of officinae	A, B, Γ
" II	" "	A, B, Γ, q (6)
" III	" "	q (5), q
" IV	" "	Δ, Ε

The main objections to this latter theory are (1) that (on the supposition that the Brit. Mus. collection is fairly representative) it provides coinages for *four* years only, (2) that it does not account for the exergue ζΔI.

<sup>1</sup> This series may possibly be as early as A. D. 659, when Heraclius and Tiberius became Caesars, but probably it succeeded the previous series (No. 199 ff.), which filled the period A. D. 659/60–663/4. (One specimen, No. 252, is restruck on a coin of year 1Θ (19) = A. D. 659/60.) The present series may have ended in A. D. 665/6 (= year 25) when a new (dated) type appears, described *infra*.

[ALEXANDRIA]					
Some of the more barbarous coins described <i>supra</i> under Heraclius (p. 227) may possibly have been struck at this mint in the early part of the reign of Constans II, at some time between A. D. 641–646; see Introduction, § 2, Heraclius I, Alexandria.					

<sup>1</sup> These coins appear from size and style to be of the reign of Constans II, but the attribution is difficult. Sabatier (ii, p. 3, No. 10; Pl. 34, 10) describes a specimen with the date  $\text{N}$ , but our No. 265 has clearly  $\text{N}$  = 7? But in year 7, Constantine IV was not yet associated with Constans as Augustus. Sabatier suggests that the date is reckoned from A. D. 654, when Constantine IV became Augustus.

<sup>1</sup> Cp. Montagu *Cat.*, No. 1146 with P between the busts.

<sup>2</sup> I have ventured to assign to this mint certain solidi of flat fabric which differ in several respects from the pieces struck at Constantinople. The differences are (i) in the fabric, usually very flat; (ii) the somewhat high relief of the inscription on the *rev.*, and sometimes the substitution of a *linear* border on the *rev.* for the usual dotted border; (iii) the peculiar marks of the officinae at the end of the inscription and in the field (with these compare the marks on the semisses and tremisses described *infra*).

<sup>1</sup> de Salis seems to have assigned this coin and the following coins of the I denomination to the mint of Rome, but it appears to me that an attribution to Sicily is decidedly preferable, for the following reasons. (i) The date ANNO I accompanying the bearded head is a difficulty at Rome, where we have *beardless* heads on coins dated year 5; on the other hand, if the coins are attributed to a Sicilian mint the date can be fairly well explained (as suggested by a writer in Spink's *Monthly Numismatic Circular*, 1905, p. 8015) as 'year 1' of the residence of Constans in Syracuse, i.e. A.D. 662. (ii) The fabric is not so much Roman as Sicilian, i.e. the coins are flat and somewhat thin, and the *rev.* is *scooped out* so that the type is in a sort of circular incuse (see these peculiarities on the M coins of Sicily described above, except in the case of the SC pieces). (iii) Specimens of No. 372 have been found at Syracuse (Spink's *M. N. C.*, loc. cit.).

<sup>2</sup> Cp. Photiades *Cat.*, No. 323, with ANNO Δ. A similar specimen in an English collection (1905).

## DIE DEUTSCHE HEIMAT DES RUODLIEB

VON KARL STRECKER

Der deutsche Leser, dessen Blick auf die vorstehende Überschrift fällt, wird etwas erstaunt aufmerken: über die Herkunft des Ruodlieb Worte zu verlieren heißt doch wahrhaftig Eulen nach Athen tragen, denn der Gedanke dürfte ihm noch nicht gekommen sein, daß an der deutschen Heimat des Gedichtes, das wir uns gewöhnt haben zu den köstlichsten Perlen unserer älteren Literatur zu zählen, gezweifelt werden könnte. Ja, das ist es gerade! Das haben die deutschen Gelehrten glücklich erreicht. Seit hundert Jahren sind sie nicht müde geworden mit Plagiat und Fälschung das Ausland um Ruhm und Lohn seiner Ideen zu bringen<sup>1)</sup> und die wertvollsten Erzeugnisse seiner Literatur für ihr Vaterland in Anspruch zu nehmen; die Wissenschaft muß revidiert werden, und allem, was von den Deutschen ausgeht, muß grundsätzlich stärkstes Mißtrauen entgegengebracht werden: *'Ces doutes (R. Laistners), j'ai hésité d'abord à les partager; car ils s'inspirent moins encore de l'examen scrupuleux du texte que de cette méthode hasardeuse, à laquelle l'Allemagne nous a habitués et dont il faut confesser que nous avons été trop longtemps dupes en histoire et en philologie'* (M. Wilmotte in dem sofort zu nennenden Aufsatz S. 380). Es gilt das Verlorene zurückzugewinnen, *revendiquer*. Einen Teil dieser wichtigen Aufgabe hat M. Wilmotte auf sich genommen und das Ergebnis seiner Tätigkeit in einem Buche niedergelegt, das den vielversprechenden Titel trägt *'Le français a la tête épique'* (1917; ich habe es bisher nicht zu Gesicht bekommen). Um freilich den Franzosen die Führung in der epischen Dichtung vindizieren zu können, mußte er zunächst zwei unangenehme Hindernisse aus dem Weg räumen, und so wies er 1916 in einem Aufsatz: *'Le Rodlieb notre premier roman courtois'* (Romania 1916/17, 373ff.) und 1918: *'La patrie du Waltharius'* (Revue historique CXXVII 1ff.) die französische Herkunft dieser beiden epischen Gedichte nach. Man könnte mit einem Achselzucken an diesen kindlichen Vergnügungen vorübergehen, mit Wissenschaft haben sie ja nichts zu tun, aber es erscheint mir doch wünschenswert, die beigebrachten Beweise etwas unter die Lupe zu nehmen, denn es liegt Methode in diesem Vorgehen, und wenn es nicht mit einiger Deutlichkeit gekennzeichnet wird, so dürfte das bald als Zugeständnis aufgefaßt werden, und man wird die neuen Ergebnisse dieser 'Forschung' als feststehend betrachten, wie sie denn der Rezensent des genannten Buches, L. Foulet, Romania 1919,

<sup>1)</sup> Die Leser dieser Zeitschrift werden sich an den Bericht erinnern, den M. Pohlenz 1919 XLIII 340ff. über V. Bérards Buch: *'Un mensonge de la science allemande'* gab. Nach ihm zitiere ich. Vgl. auch M. Pohlenz Neue Jahrb. 1920 XLV 186ff.

535 registriert, ohne Bedenken zu äußern — viel Sachkenntnis darf man ja drüben, namentlich was den Ruodlieb angeht, wohl nicht voraussetzen. Und interessant ist es, daß die Tageszeitungen sich beeilt haben, diese Triumphe romanischen Geistes in alle Welt zu posaunen. Ein Herr, der in Gefangenschaft war, teilte mir mit, daß der 'Matin' in spaltenlangen Leitartikeln über Wilmottes glorreiche Entdeckungen und auch über das Buch von Bérard berichtet hat. Auch aus dem Grunde ist es vielleicht nicht ganz überflüssig, diesen Dingen etwas Aufmerksamkeit zu widmen, weil Wilmotte, je weniger begründet seine Behauptungen sind, desto sicherer auftritt und jemand, der ferner steht, doch vielleicht zu dem Glauben gebracht werden könnte, es sei etwas dahinter. Diese Erwägungen haben mich veranlaßt, die folgenden Zeilen zu schreiben, obwohl es ein quälendes Gefühl ist, so hinabsteigen zu müssen, das nur gelegentlich gemildert wird, wenn des Verfassers unfreiwillige Komik ein befreiendes Lachen auslöst. Da er sich ausdrücklich an die '*esprits non prévenus*' wendet, bemerke ich noch, daß ich zu diesen nicht gehöre, doch beruht meine *préoccupation* lediglich auf meinen Bedenken gegen Wilmottes philologische Methode, die ich am Waltharius sattsam kennen gelernt habe. Daß ich seine Beweise studiert habe, werden meine Ausführungen zeigen.

Also Waltharius und Ruodlieb französisch! Diese These ist ja für das erstgenannte Gedicht nichts Neues, hier hat Wilmotte schon in Fauriel (Hist. de la poésie provençale I, 1846, 397 ff.), Grellet-Balguerie (Comptes rendus de l'Acad. des inscr. et belles lettres IV. Ser. T. XVIII, 1891, 374), J. Flach (Rev. des études hist. Juli-August 1916) wackere Vorläufer.<sup>1)</sup> Ich kenne die Ansichten der beiden zuletzt Genannten nur sehr oberflächlich, doch lohnt es offenbar auch nicht, sich näher damit abzugeben; wie es scheint, herrscht zwischen den vier Gelehrten nur im Ziel Übereinstimmung: der Waltharius muß zurückgewonnen werden; im übrigen widersprechen sie sich und heben sich gegenseitig gewissermaßen auf, wir können diese Ausführungen also auf sich beruhen lassen.<sup>2)</sup> Über den scherzhaften Artikel Wilmottes, dessen Hauptbeweis ein Vers ist, den er ganz falsch verstanden hat, habe ich Zs. f. d. A. LVII 185 ff. das Nötigste gesagt.<sup>3)</sup> Nur auf Fauriel möchte ich mit einem Worte zurückkommen, weil er mit Wilmottes Ruodliebaufsatz in gewisser Beziehung steht; als ich zufällig beide kurz hintereinander las, war es mir sofort klar, daß dieser ihm den besten Teil seiner Methode verdankt, eine Verwandtschaft, die sich sogar auf die für einen Deutschen geradezu verblüffende Flüchtigkeit erstreckt. Bei Wilmotte werden wir sie bald kennen lernen, für Fauriel schnell ein lustiges Beispiel. Er stellt unverdrossen eine Behauptung neben die andere, ohne daß der un-

<sup>1)</sup> Vgl. auch Hist. littér. VI 438.

<sup>2)</sup> Daneben noch eine zweite Übereinstimmung: Geraldus ist der Dichter, dem die Deutschen '*sans ombre de preuve*' seinen Ruhm streitig machen. Nun, wer die Unmöglichkeit nicht zu empfinden vermag, wer auch den Unterschied im Versbau nicht erkennt, dem ist nicht zu helfen.

<sup>3)</sup> Ich habe dort bezweifelt, daß W. das Vorkommen von drei Walthariusshss. in S. Apri verwertet habe. Das war ein Irrtum. Ich konnte damals das Heft nicht nochmals einsehen.

geduldige Leser etwas Positives erhält, schließlich aber bringt er eine Tatsache (S. 404): Walther wird scharf von den Franken unterschieden, einer von diesen wirft ihm vor, daß er Keltisch spreche und einer Rasse angehöre, die von Natur *rieuse* und *boufonne* sei:

V. 765 *Celtica lingua probat te ex illa gente creatum,  
Cui natura dedit reliquas ludendo praeire.*

Wer den Waltharius kennt, erinnert sich sofort, daß die Sache sich gerade umgekehrt verhält: Walther spricht diese Worte zu dem Sachsen Ekefrid!<sup>1)</sup>

Ich komme zum Ruodlieb. Hier ist ja für Wilmotte vollständiges Neuland; das Gedicht ist in Frankreich und Belgien wohl kaum bekannt, und der Verf. gesteht, daß er selbst eigentlich durch einen Zufall darauf geführt worden ist, dies echt französische Gedicht zu entdecken, worauf in ihm natürlich sofort der Entschluß reifte, es zu *revendiquer*. Wollte er dies, so mußte er freilich nicht weniger als alles umwerfen, was bisher darüber festzustehen schien. Dies ist ja nun leider nicht allzuviel, weil es in einem erbarmungswürdigen Zustande auf uns gekommen ist; die rund 2300 Verse oder Versreste, die uns erhalten sind, stehen auf Pergamentblättern oder Fetzen von solchen, die von den Deckeln ehemaliger Tegernseer Hss. abgelöst sind und nun als clm. 19486 in München aufbewahrt werden; außerdem hat sich ein Doppelblatt aus einer Abschrift der Tegernseer Hs. in St. Florian erhalten. Aus dem Charakter der Korrekturen schloß man, soweit ich sehe, einstimmig, daß wir die Originalschrift von der Hand des Dichters selbst haben. Da glücklicherweise das letzte Blatt gerettet ist, auf dem das Gedicht abbricht, während der Rest des Pergaments mit Epigrammen bedeckt ist, die nicht dazu gehören, weiß man, daß der Dichter sein Werk nicht zu Ende geführt hat. So hat bis jetzt noch niemand daran gezweifelt, daß er in Tegernsee zu suchen sei; daß er ein Deutscher ist, mußte um so selbstverständlicher erscheinen, als in dem Gedicht sich zahlreiche deutsche Wörter, namentlich der berühmte Liebesgruß, deutsche Fischnamen, ein Stück einer Heldensage mit deutschen Namen, außerdem, von der Hand des Dichters-Schreibers, einige deutsche Glossen finden. Über Person und Zeit herrscht weniger Übereinstimmung. Da Tegernsee die Heimat ist, konnte kein anderer als der bekannte Froumund in Frage kommen, und weil man das Fragm. V auf die Zusammenkunft Heinrichs II. mit Robert von Frankreich an der Maas im J. 1023 beziehen zu müssen glaubte, nahm man die Zeit bald nach 1023 an und datierte die Hs. dementsprechend. Doch lassen sich diese Aufstellungen kaum halten, Froumund als Dichter hat zweifellos auszuschneiden; ob die historischen Beziehungen nicht auf Täuschung beruhen, ist mindestens zweifelhaft, und schließlich setzt Chroust (Mon. pal. II Lief. 2 Taf. 7) die Hs. erheblich später, nach 1050 an, und Tangl, den ich konsultierte, schließt sich ihm im allgemeinen an.

<sup>1)</sup> Ich kann es mir nicht versagen mitzuteilen, wie W. S. 28, 1 die Stelle erklärt: Der Sachse ist ja *exul*, im Elend hat er Französisch gelernt, und Walther hält ihn natürlich für einen Landsmann! Wie kann er dann aber 768 sagen: *post Saxonibus memorare valebis?* — Das ist natürlich keine *méthode hasardeuse*!

Die Fragen, die sich an das Gedicht knüpfen, sind schwierig, und die deutschen Gelehrten haben sich redlich bemüht, ihrer Herr zu werden, aber sie waren alle auf dem Holzwege, verblendet, *préoccupés*. Wilmotte ist es gelungen die zahlreichen Rätsel spielend zu lösen<sup>1)</sup>, nach ihm ist der Ruodlieb<sup>2)</sup> die Übersetzung<sup>3)</sup> eines französischen höfischen Epos, das nach 1100 am Mittellauf der Maas, etwa zwischen Lüttich und Namur entstand. Und die Beweise für diese immerhin etwas überraschende Tatsache? Nun ja, deren bedarf es doch eigentlich kaum, ein so entzückendes Werk kann doch von einem Deutschen nicht verfaßt sein, zudem erfordert es die Logik, daß es von einem Franzosen ist, *'ces précieux vestiges d'un art, dont nous nous étions habitués à considérer qu'une sorte de génération spontanée nous l'avait restitué aux environs de 1150, nous appartiennent indubitablement et forment la transition, nécessaire et logique, entre les brèves narrations d'une latinité antérieure et nos romans du XII<sup>e</sup> siècle, dont la vogue a conquis l'Europe'* (La patrie du W. S. 2) und *'rien dans ce texte ne s'apparie aux créations authentiques du génie de leur race. Ils (Seiler und Laistner) ne voient pas, ils ne veulent pas voir, qu'il y a là un simple roman d'aventures conçu à la française, j'entends avec l'agréable frivolité, le scepticisme spirituel, la finesse de ton'* usw. (Romania S. 389). Das ist der Hauptbeweis. Erfreulicherweise brauche ich mich nicht allzulange dabei aufzuhalten, denn diese Frage ist von den deutschen Gelehrten, ohne daß der Verf. es weiß, längst erledigt; der Mann, der es unternimmt, die Ruodliedforschung auf eine ganz neue Basis zu stellen, begnügt sich nämlich in rührender Selbstbeschränkung mit der Einleitung Seilers zu seiner Ausgabe und den Ausführungen seines Rezensenten R. Laistner (Anz. f. d. A. IX 70 ff. und Zs. f. d. A. XXIX 1 ff.). Freilich sind diese die unerläßliche Grundlage für jede Beschäftigung mit dem Ruodlieb, aber das Studium wenigstens der Literaturgeschichten von Kögel und Ehrismann ist daneben doch dringend anzuraten, und auch der bekannte Aufsatz P. v. Winterfelds, Arch. f. d. Stud. d. neueren Lit. CXIV 1 ff. würde ihn sehr interessiert haben, hätte er dort doch eine Stelle gefunden, die zweifellos eine bedeutende Rolle in seiner Beweisführung gespielt haben würde, allerdings ohne Grund. Vor allem ist das Buch von Ehrismann wichtig; als ob er vorausahnte, welch Unfug noch einmal mit dem Ruodlieb getrieben werden würde, hat er

<sup>1)</sup> Wenn man nur die richtige Gesinnungstüchtigkeit besitzt, so gibt es keine Schwierigkeit. *'La difficulté que soulèvent nos fragments dans leur teneur actuelle est donc plus apparente que réelle'* (a. a. O. 406).

<sup>2)</sup> W. behauptet, 'Rodlieb' sei die Namensform in der Hs., die mit 'Rotlieb' wechsele.

<sup>3)</sup> Ich weiß nicht, ob ich damit dem Verf. nicht unrecht tue; er spricht es nicht direkt aus, aber seine Ausführungen sind mir nur bei dieser Annahme verständlich, und S. 374 steht der Satz *'à lire les fragments de R. on est invinciblement tenté de le considérer comme le simple décalque d'un texte en langue vulgaire'* Er scheint sich selbst nicht ganz klar darüber zu sein, denn er redet dauernd vom *auteur*, wo er vom Übersetzer sprechen müßte. Auch sonst ist er oft recht unklar oder unsicher; z. B. die Heimat an der Maas wird einmal behauptet, dann aber sagt er wieder, er wolle sich nicht bestimmt darüber ausdrücken. Sollte ich gelegentlich die Anschauungen des Verfassers nicht genau wiedergeben, so liegt das an diesem Mangel an Präzision.

Litg. S. 402ff. und noch schärfer schon früher Zs. f. d. Phil. XXXVI 400 diesen Punkt widerlegt. Wenn ich trotzdem ein wenig dabei verweile, so ist es nicht, weil ich glaube dem irgend etwas Schwerwiegendes hinzufügen zu können, sondern um die Leser über die Sachlage zu orientieren.

Lassen wir den Inhalt des Märchenepos ganz kurz an unserm Auge vorüberziehen.<sup>1)</sup> Ein edelgeborener junger Mann, der im Dienst mehrerer Herren gar oft sein Leben aufs Spiel gesetzt hat, ohne von ihnen den gebührenden Lohn zu erhalten, entschließt sich, um den Feindschaften zu entgehen, die er sich dadurch zugezogen hat, Mutter und Heimat zu verlassen. Unterwegs gewinnt er einen treuen Freund, der ihn veranlaßt, in den Dienst seines Königs zu treten. Hier erringt er sich als echter Märchenheld gar bald eine angesehene Stellung und macht sich namentlich in einem Grenzkriege außerordentlich verdient. Als er auf die Bitte seiner Mutter zurückzukehren den König um seine Entlassung angeht, läßt dieser ihm die Wahl zwischen guten Lehren und klingendem Lohn; er entscheidet sich für ersteres und erhält zwölf Weisheitslehren, daneben aber in zwei Attrappen, silbernen Kapseln in Brotform, die von außen mit Brotteig bedeckt sind — im zugrundeliegenden Märchen sind es wirkliche Brote —, Goldmünzen und Kostbarkeiten aller Art. Die weitere Entwicklung der Handlung dreht sich nun zunächst um die Erprobung der guten Lehren, aber es werden nur die drei ersten in Anwendung gebracht.<sup>2)</sup> Dann setzt wieder die Rahmen-erzählung ein. Bei der Fortsetzung der Rückkehr trifft er einen Neffen, den er aus unklar bleibenden, wenig ehrenvollen Verhältnissen befreit, kehrt mit diesem auf einem Edelsitz bei einer vornehmen Witwe ein, deren liebeizende Tochter es dem Neffen alsbald antut, und trifft dann in dessen Begleitung, von allen freudig begrüßt, wieder zu Hause ein. Bald danach wird der Neffe mit dem Fräulein vermählt, und auch Ruodlieb entschließt sich zur Ehe, hat aber Gelegenheit, eine Dame, die er sich erkoren hat oder die ihm empfohlen ist, als Buhlerin zu entlarven (Liebesgruß). Am Schluß hat die Mutter zwei Träume, die ihr die Zukunft des Sohnes ausmalen. Diese weisen schon auf das ganz anders geartete letzte Bruchstück hin. Dort sind wir plötzlich in der Heldensage.

<sup>1)</sup> Eine ausführliche Inhaltsangabe bietet Kögel, Littg. I<sub>2</sub>, 344ff. mit der etwas unhöflichen Begründung, das Lesen des Originals sei keine ganz leichte Sache. Er hat aber nicht unrecht, und aus mancherlei Anzeichen glaube ich schließen zu dürfen, daß auch W. alle Veranlassung hat ihm zuzustimmen. Wer zugleich einen ästhetischen Genuß haben will, lese die metrische Übersetzung von P. v. Winterfeld, Deutsche Dichter des lat. Mittelalters in deutschen Versen, 1913, 287ff. (auf S. 329—332 ist die Reihenfolge der Szenen in Verwirrung geraten, an den Fischzug S. 329 mußte sich sofort die Mahlzeit 332f. schließen). Weniger gelungen ist die Übertragung von Moriz Heyne (1897), vgl. ebd. S. 426.

<sup>2)</sup> Wie sorgfältig W. ist, ersehe man daraus, daß er behauptet, der Held erhalte drei Lehren vom Könige; von der interessanten und Kopferbrechen veranlassenden Tatsache, daß es zwölf sind, aber die neun letzten unbeachtet bleiben, erfährt der Leser kein Wort. Auch behauptet er S. 373: '*notre héros néglige successivement ces trois conseils, et il n' a pas à s'en féliciter*'. Tatsächlich läßt er nur die erste unbeachtet, indem er die Gesellschaft eines Rotkopfs duldet. Dieser verstößt dann gegen die zweite und dritte Lehre und zieht sich Unannehmlichkeiten zu, während der Held sie streng befolgt und sich deswegen auch nur beglückwünschen kann.

Ruodlieb hat einen Zwerg am Kragen, der ihm eine glänzende Zukunft prophezeit, wenn er ihn schone und seine Ratschläge befolge. Seine zierliche Gattin schließt sich den Bitten an und ist bereit, als Geisel in seiner Hand zu bleiben. Damit bricht das Gedicht unvermittelt ab.

Diese ganz rohe Wiedergabe kann natürlich nur den Zweck haben, den Gang der Handlung ins Gedächtnis zurückzurufen, und muß darauf verzichten, das, was für den Ruodlieb so charakteristisch ist, die eigenartige Form der Darstellung, die Vorliebe für Kleinmalerei, Beschreibung von Kunstgegenständen, Neigung zu episodenhafter Ausweitung einzelner Szenen, die vom Waltharius himmelweit verschiedene, fast modern anmutende Sprache usw. zur Anschauung zu bringen. Wilmotte hat das alles mit höchstem Staunen kennen gelernt: hier haben wir ja offensichtlich die Anfänge des höfischen Epos! Dasselbe Genre, *ce ton, ces usages, ce convenu* existiert schon im 'Roman de Thèbes'! (S. 390). Der Dichter ist nicht für Beschreibung von Kämpfen interessiert, wohl aber schildert er liebevoll die Ausrüstung des Ritters; er malt nicht die Schlacht, sondern die Heimkehr im Triumph; nicht der krieglerische König ist das Ideal, sondern der milde und gerechte. Das Leben am Königshof und auf der Ritterburg ist dasselbe, wie wir es später entwickelt finden; die Damen sitzen am Fenster und schauen dem Ankommen und Abreiten der Ritter zu, hurtige Pagen, *agiles tyrones, bachelers legiers* bedienen sie. Dazu die detaillierte Beschreibung von Schmuckstücken, dressierten Tieren, des Schachspiels, die Entwicklung des Gefühlslebens, Umarmungen und Tränen bei Ankunft und Abschied — der Verf. findet kein Ende, Parallelen mit der französischen Dichtung zu ziehen: der Ruodlieb ist das erste höfische Epos! Folglich ist er französisch. — Nun, diese Beobachtung ist auch den Deutschen nicht ganz neu, namentlich betont Kögel immer wieder, vielleicht sogar etwas zu stark, daß wir im Ruodlieb den ersten höfischen Abenteuerroman zu sehen haben, nur zieht er andere Folgerungen daraus.

Aber Kögel erkannte auch, was Wilmotte in seiner Entdeckerfreude völlig übersehen hat, daß dies nur die eine Seite der Betrachtungsweise sein kann und nicht einmal den wesentlichen Charakter der Dichtung trifft. Noch schärfer hat Ehrismann a. a. O. dies herausgearbeitet, ich brauche nur kurz zu wiederholen, was dort ausgeführt ist: Menschen und Dinge sind nicht die der idealen Sagenwelt des volkstümlichen Epos, auch nicht die eines erträumten höfischen Rittertums, sondern sie leben in der Gegenwart; das Leben der Zeit gibt den Hintergrund ab, der Realismus ist die eigenartige Form dieses Werkes.<sup>1)</sup> Um das richtige Verständnis, den richtigen Standpunkt für seine Beurteilung zu gewinnen, muß man es mit Dichtungen wie Meier Helmbrecht vergleichen. Dieser Gesichtspunkt ist Wilmotte fremd geblieben, seine Darlegungen beweisen daher für seine Behauptung nicht das geringste.

Er schließt dann (S. 394): '*et si l'on peut établir que c'est dans un vocabulaire tout roman avec des tours à peine contraints par les exigences syntaxiques d'une autre*

<sup>1)</sup> Um des Raumes willen muß ich es mir versagen mehr zu bringen, bitte aber die Leser, die Interesse dafür haben, die vortreffliche Darstellung Ehrismanns nachzulesen.

*langue* usw. Man glaubt Fauriel zu lesen, der mit denselben Argumenten die französische Herkunft des Waltharius bewies: *locution* und *phraseologie* sind nach ihm '*dans le génie des idiomes romans et semblent n'avoir pu échapper qu' à un homme accoutumé à sentir et à penser en quelqu'un de ces idiomes*'; man könne den Waltharius einem Italiener, Spanier, Galloromanen zuschreiben, einem Germanen nicht. Genau dasselbe Argument verwendet Wilmotte für den Ruodlieb. Er ist hier nun insofern in einer günstigen Lage, als Seiler ihm unbewußt vorgearbeitet hat durch die unvorsichtige Bemerkung (S. 135f., vgl. Wilmotte S. 383 Note), es kämen im Ruodlieb eine ganze Reihe Romanismen vor, so daß er, wenn sein germanischer Ursprung nicht zweifellos wäre und diese scheinbaren Romanismen nicht durch eine weit größere Zahl von Germanismen aufgewogen würden, in den Ruf französischen Ursprungs kommen könnte (als ob Romanisch und Französisch ohne weiteres identisch wäre!). Wegen der echten Germanismen könnten es aber keine echten Romanismen sein, sondern die Wörter müßten mittellateinisches Gemeingut sein und der Vulgärsprache entstammen. Wenn nun aber jemand diese 'wirklichen Germanismen' leugnet, nachweist, daß es keine sind, ist das Gedicht dann als französisch anzusehen? Seiler macht einen grundsätzlichen Fehler, indem er zuviel mit Diez, Kühner, Draeger operiert, statt sich die Sprachdenkmäler selbst anzusehen; es fehlte ihm, wie er in der Vorrede klagt, an der nötigen Literatur. Er hat aus Diez, Gramm. I<sup>3</sup> 34 zehn Wörter herausgefischt, die auch im Ruodlieb vorkommen, und redet ein langes und breites darüber, ob das nun Romanismen sind. Ein klein wenig Lektüre würde ihn belehrt haben, daß ihr Vorkommen im Ruodlieb nicht das geringste zu bedeuten hat, weil sie eben auch sonst überall im Latein der Zeit zu finden sind. Bei der Bedeutung der Sache hole ich es für ihn nach und bringe einige Parallelen, die ich ohne Mühe zusammengesucht habe, natürlich aus Texten, deren französischer Ursprung bisher von Wilmotte noch nicht nachgewiesen ist; hoffentlich richte ich damit nicht neues Unheil an. Man muß sich natürlich überlegen, wo man zu suchen hat; Werke, die unter klassischem Einfluß stehen, werden für den Ruodlieb nicht viel hergeben, dafür bedarf es anderer Parallelen, z. B. Notkers 'Gesta Caroli', Ekkehard's 'Casus s. Galli', Briefliteratur, auch die Volksgesetze, deren Wortschatz im Volke sicherlich verbreitet war.<sup>1)</sup>

Die 10 Romanismen sind also folgende: 1. *auca* (*oie*): findet sich z. B. bei Ekkehard IV, Lib. benedict. ed. Egli S. 290, 79. Formelbuch Salomonis ed. Dümmler n. XXXV (cod. U). XXXVI. 2. *caminata*: Gesta C. I 5. Cas. s. Galli passim. 3. *cappa*: Cas. s. G. 5. MG. LL. I 201, 27. 4. *causa* = *res*: vgl. Thesaurus l. l. s. v. (W., La patr. d. W. 27 weist auf Cicero hin), Hrotsvit vgl. Winterfelds Index, Waltharius.<sup>2)</sup> 5. *gamba*:

<sup>1)</sup> Im allgemeinen verweise ich auf Wölfflins Archiv f. lat. Lexikogr.; daneben auf die trefflichen Ausführungen von Klebs, Die Erzählung von Apollonius von Tyrus S. 228ff. usw.

<sup>2)</sup> Die Nennung des Waltharius ist natürlich Wasser auf die Mühle Wilmottes. Wie unklar er in diesen Dingen denkt, zeigen seine Ausführungen S. 376: Althof, der annahme, der Ruodliedichter habe den Waltharius gekannt und imitiert, wird von ihm getadelt, daß er sich nicht gefragt habe, '*si de telles analogies que les différences de thème et de style ne pouvaient faire prévoir, ne sont pas imputables à une tout autre cause, et si par exemple on n'a pas composé les deux écrits à court intervalle dans des lieux voisins*' (S. 376). Also wenn beide

schon bei Vegetius, wie Seiler selbst angibt; die Bedeutung hat sich später erweitert 6. *iterare* = *iter facere*: aus Tegernsee Pez, Thesaur. VI 1 S. 125; Ardeo, Vita Corbiniani, SS. rer. Mer. VI 574; vgl. auch Ph. Fuchs, D. altfranz. Verbum *errer* mit seinen Stammesverwandten usw. Rom. Forsch. 1919, 336. 7. *placitum*: Formelb. n. XIX. Translatio Liborii MG. SS. IV 150, 40. In den Leges unendlich oft. 8. *praestare* (*préter*): aus Tegernsee Pez, Thes. VI 115 Brief 7, 166 Br. 16 usw.; speziell vom Leihen des Pferdes, wie bei Ruodl. V 469, Lex Fris. LL. III 695. 9. *poledrus*: Brief aus Tegernsee, von Seiler S. 170 N. selbst zitiert, *puletum*; Leg. Alam., Baiuvar. usw. 10. *vassus*, *vasallus*: unendlich häufig, z. B. Vita Udalrici SS. IV 399, 5. Gesta C. I 13. Sollen nun diese von mir angeführten Werke auch in den Ruf französischen Ursprungs kommen? Man sieht, welchen Wert diese Ausführungen haben. — Dann folgen bei Seiler noch einige 'scheinbare Romanismen', die bei Diez fehlen 1. *sera* der Abend. Es ist nicht uninteressant, daß Wölfflin, Arch. IV 263 daran dachte, wegen dieses einen Wortes die Peregrinatio Aetheriae in Italien zu suchen, weil es in Frankreich fehle, denn *soir* setzt *serum* voraus; Suchier hat dann freilich gezeigt, daß es in der Provence vorkommt, und Geyer (Arch. VIII 479) hat es bei Sextus Empiricus nachgewiesen; in Nordfrankreich ist es jedenfalls nicht vorhanden, beweist also in unserem Falle eher das Gegenteil. 2. *gens*, *gentes* = Leute. Ein Hinweis auf Klebs S. 247 und Arch. VI 341 ff. genügt. 3. *parabola* (Ruodl. V 591). Laistner hat schon darauf aufmerksam gemacht, daß die Übersetzung mit 'Wort' hier nicht zutreffend ist; im übrigen vgl. Klebs S. 270, 1. 4. *seriosus* erinnert uns ja natürlich an das französische *sérieux*, doch ist das Wort gemeinromanisch und gehörte ohne jeden Zweifel dem Latein der Zeit an. Es ist auffallend, wie beliebt diese Wörter auf *-osus* sind, z. B. De schola Herbiol., Zs. f. d. Ph. XIV 434 ff. *leprosus*, *viciosus*, *mendosus*, *furiosus*, *maculosus*, *generosus*, *formosus*; so werden wir uns nicht wundern, wenn wir sie auch im R. häufig finden, mit dem Französischen hat das nichts zu tun. 5. *gulatus*: dies Wort ist ganz anders zu beurteilen, es ist wahrscheinlich französisch, denn es setzt die Erfindung voraus, daß man die Kleidung mit *gulae*, *gueules*, roten Einsätzen, verzierte. Für die Herkunft des Gedichtes ist das natürlich ganz unwesentlich; unsere lieben Landsleute ließen sich eben damals wie heute die Mode von Frankreich diktieren, mit der Mode kam auch das Wort. Ebenso wird es sich mit IV 6 *pellicis crisis varicosis sive crusennis, gris et vair* verhalten.

Wie steht's nun mit den 'wirklichen Germanismen'? Den Verf. stören sie wenig. Die vier deutschen Glossen gehören dem Tegernseer Schreiber. Über den Liebesgruß, die deutschen Fischnamen siehe unten. Mit dem Rest ist leicht aufzuräumen. Allerdings sind sie deutschen Ursprungs, aber als Lehnwörter längst, '*dès les origines de notre langue*', eingebürgert und '*usuellement employés*', *verra* = *guerre*, im Norden *werre*, *fodrum fue(d)re*, *faida faide*, *gris*, *mordrita mordrit*; sie beweisen für deutschen Ursprung gar nichts. Das ist für einige ohne weiteres zuzugeben, aber ein höchst interessantes Wort ist darunter, *mordrita* = Mörder, dem wir unsere Aufmerksamkeit zuwenden müssen. Wenn es wirklich im Sprachgebrauch der Zeit gewöhnlich wäre, so wäre das eine wichtige Sache, denn diesseits des Rheins ist Ruodlieb VIII 20 der einzige Beleg für

die Phrasen *patria dulcis*, *mensa sublata*, *inquit* (*susurrat*) *in aurem* usw. haben, so soll das durch die Nähe des Entstehungsortes und der Zeit erklärt werden, ohne daß R. von W. abhängig wäre. Oder was will der Vf. sagen? Was den *court intervalle* betrifft, so liegen nach ihm 200 Jahre zwischen den beiden Dichtungen!

diesen Gebrauch, und zwar ist die Stelle noch unerklärt, vgl. Kögel S. 380 f. Das Wort *mordritus* und ähnliches ist ja in den Gesetzen weit verbreitet, aber es bedeutet nicht 'Mörder', sondern den 'heimlich Ermordeten', und die Form *mordrita* findet sich nur in der Lex Baj. LL. III 328, was bei der uns interessierenden Frage nicht bedeutungslos ist. Kögel nimmt zu der verzweifelten Annahme seine Zuflucht, der Dichter hätte das Gesetz nicht richtig verstanden. Das ist freilich schwer zu glauben. Aus aller Not sind wir, wenn wirklich im Französischen das Wort in der Bedeutung 'Mörder' vorkommt; dann müssen wir wirklich überlegen, ob nicht diese Sprache zur Erklärung heranzuziehen ist; doch muß ich leider fürchten, daß Wilmotte den Beweis schuldig bleibt; bei Godefroy habe ich die Vokabel vergeblich gesucht, und wie mein Kollege Lommatzsch, der Verwalter des Toblerschen Nachlasses, mir mitteilt, ist es auch bei diesem nicht zu finden!<sup>1)</sup> Ob *fodrum* ohne weiteres mit *fuere* gleichzusetzen ist, scheint mir auch nicht zweifellos. Über *marhmanni* R. II 52 schließlich geht der Verf. mit allgemeinen Redensarten hinweg und glaubt dazu berechtigt zu sein, weil Seiler und Laistner darüber geschwiegen hätten. Daß es deutsch ist, wagt auch er wohl nicht zu leugnen.

Es handelt sich aber nicht nur um ein paar romanische Vokabeln, nein, die ganze Sprache ist völlig romanisch, das Lateinische ist nur *une enveloppe, un léger tissu*. Auch hier konnte der Verf. an Seiler anknüpfen. Dieser hat im 5. Kap. der Einleitung fleißige Zusammenstellungen über die Sprache des Dichters gemacht, die leider nicht sehr glücklich ausgefallen sind, weil ihm die nötige Belesenheit fehlte und er infolgedessen den Ruodlieb unter dem Gesichtspunkte des klassischen Lateins betrachtete. Und einen schlimmen Fehler macht er dann, indem er geneigt ist, alles, was sich nicht in das klassische Schema pressen läßt, als 'Germanismus' zu betrachten.<sup>2)</sup> Das ist natürlich ganz verkehrt, er hat das auch erkannt und in der Vorrede zurückgenommen, wenn auch nur implizite, aber da war es zu spät, die Vorrede studiert keiner, und so geht denn das Gerede von den Germanismen des Ruodlieb unangefochten durch die Literatur, und Kögel verstieg sich sogar zu dem Ausspruch, der Ruod-

<sup>1)</sup> Wilmotte hat für solche Fälle ganz niedliche Wendungen zur Verfügung, z. B. '*je n'ose dire que cet effort ait été totalement désintéressé*' (La patrie d. W. S. 15); es läge nahe hier eine solche zu verwerten, doch nehme ich die gewohnte Flüchtigkeit an, es fehlt da etwas am '*examen scrupuleux*': daß das deutsche *murdrian* ins Französische übergegangen ist, ist ja bekannt; daß damit noch nicht *mordrit* der Mörder gegeben ist, hat er sich wohl nicht klargemacht.

<sup>2)</sup> Ich möchte die Gelegenheit benutzen, einen üblen Germanismus, der, wie es scheint, seit 40 Jahren unbeanstandet geblieben ist, aus der Welt zu schaffen, III 61 *citat ad remeandum*. Seiler 124, 1 vergleicht, etwas bedenklich, das deutsche *ilen ze*. Damit kommen wir allerdings den *Epistolae obscurorum virorum* bedenklich nahe; aber der Dichter ist unschuldig daran. Erhalten ist *..ns ad equum iuvenis citat ad remeandum*, leicht verständlich, der Bote eilt zum Pferde, um den Rückweg anzutreten. Seiler ergänzt *Tunc currens ad equum* usw., dann muß man natürlich *ad equum* zu *currens* ziehen, mithin ist die Ergänzung falsch. Ich denke *Inclinans ad equum*, er verneigt sich zum Abschiede, das *inclinare* spielt ja im Gedicht eine große Rolle. Seiler hat es schon V. 50 ergänzt, dort steht es weniger passend, weil es mitten im Gespräch ist.

lieb sei ein einziger Germanismus, womit er doch wohl in erster Linie die Sprache meint. Es rächt sich eben, daß sich bisher fast nur Germanisten über das Gedicht geäußert haben. Natürlich leugne ich nicht das Vorkommen von Germanismen, doch wird das maßlos übertrieben.<sup>1)</sup> Auf Wilmotte nun hat das gewirkt wie das rote Tuch auf den Stier, er ist ganz offenbar der Ansicht, Seiler hätte diese Zusammenstellungen nur gemacht, (vielfach will dieser selbst die Phrasen gar nicht als Germanismen betrachtet wissen), um die *annexion allemande* zu rechtfertigen, und gefällt sich nun darin, neben jeden Seilerschen Germanismus eine entsprechende französische Wendung zu setzen; statt nun aber logischerweise daraus zu folgern, daß diese Germanistentheorie falsch ist, kommt er zu dem Ergebnis, daß die Sprache völlig romanisch sei.

Ich gebe nur ein paar Beispiele. R. I 28 *medii cubiti longa*, Seiler S. 137 aus Grimm, Gr. IV 730 *einer halben ellen lanc*; Wilmotte: französisch ist *long de*. Was es für ein -ismus ist, zeigt Columella *longus sex pedum*. R. IV 59 *omnigeni serviminis promptus*; Seiler: 'bereit einem eines dienstes', Wilmotte: *hastif de*. Dagegen vgl. die Beispiele aus Gellius, Justinus usw. bei Georges. Seiler führt das nicht weiter auffällige *libet me* an, Wilmotte vergleicht *il m'est bel, il m'atalente*. Es lohnt wirklich nicht, weiter darüber zu reden. Nur noch ein Beispiel: die zahlreichen *quod quia quoniam* nach den Verben des Sagens, *quod* für *ut consecutivum*, *quam* sind doch deutlich Übersetzungen des französischen *que*! Hier scheint überall die französische Sprache durch den leichten lateinischen Schleier hindurch. Stellen wie I 62 *perpendit quod*, VI 94, VIII 32, IX 27<sup>2)</sup> XI 76, XVII 117<sup>3)</sup> werden als Zeugen französischen Ursprunges angeführt. Ich habe die betreffende Stelle immer wieder gelesen, der Verf. macht keine Scherze! Und es ist ein eingewurzelttes Übel, La patr. d. W. 29, 1 wiederholt er dasselbe. Unbegreiflich, daß ihn keiner seiner Landsleute darauf hingewiesen hat, daß das ein recht blamables Versehen ist.

Dann holt er weiter aus und führt nun die offensichtlichen Romanismen auf, die Seiler übergangen hat, sei es, weil er kein Französisch verstand, sei es, weil sie seine Folgerungen störten(!) oder weil er nicht darauf geachtet hat (S. 385). Man ist gespannt, findet dann aber wieder lauter Kindlichkeiten wie folgende: VII 20 *vinum de quo bibit*; *de* sei durchaus ungermanisch. Man sieht lächelnd, wie er nur auf Seilers Germanismen eingestellt ist, andre Leute würden fragen, ob es lateinisch ist. Übrigens wüßte ich nicht, warum man nicht sagen könnte 'von dem er trank'. Wilmotte denkt natürlich daran, daß der *article partitif* im Deutschen fehlt; davon ahnt seine Seele nichts, daß er im damaligen Latein nicht ungewöhnlich ist, z. B. *Gesta C. I 16 modium de argento*,

<sup>1)</sup> Wie vorsichtig man dabei sein muß, dafür ein instruktives Beispiel. Als flagranter Germanismus gilt der Gebrauch von *post* nach Verben der Bewegung in *finale*m Sinne, z. B. IV 128 *mittitur post nos . . ut veniamus*. Vita Coemgens von Glenn da locha AASS Juni I 305, cap. I 6: es soll ein Holzstoß angezündet werden, aber Coemgen hat vergessen Feuer mitzunehmen, da wird ihm befohlen: *Percurre, frater, citius post ignem*. Danach dürfte die irische Vita in den 'Verdacht deutschen Ursprungs' kommen.

<sup>2)</sup> Hier ist nicht erkannt, daß *quam male* zu verbinden ist.

<sup>3)</sup> In seinem Eifer, der unterdrückten Wahrheit endlich zum Siege zu verhelfen, '*souci de vérité et de justice*', hat der Verf. übersehen, daß dies Stück nach seiner Behauptung ja gar nicht französisch ist, sondern dem gleich zu erwähnenden bajuwarischen *remanieur* gehört.

Formelbuch XXII *deem siclas de cervisa*, XXXVI. MG. LL. III 57, 19 *tertiam partem de hereditatem usw. pro ist pour*, afr. *por*, *ad mensas* = à table, *bene velox* (bien), *multum* im Sinn von *valde*, *si* = ob; Seiler notiert höchst überflüssigerweise in *Mairo mense*, Wilmotte ahnt einen Germanismus und fragt vorwurfsvoll, ob er denn nicht an den französischen Gebrauch gedacht habe. Es ist wirklich nicht zu verstehen, daß ein Mann, der über diese Dinge im Tone der Überlegenheit redet, '*qui se hasarde dans la philologie médiévale*', wie er ironisch (S. 388) von Seiler sagt, so verblendet sein kann, daß er das Nächstliegende nicht sieht, denn er muß vermutlich doch auch gelegentlich einen lateinischen Text der Zeit aufschlagen, wo dergleichen auf jeder Seite begegnet. Das einzig Interessante bei diesen Verhandlungen ist, daß Wilmotte für die Abschiedsformel *mihi praecipitote* VII 88, wofür Seiler nur aus dem Tristan *gebietet mir* notiert, das afrz. *al vostre comant* zitiert, das freilich nicht den französischen Ursprung beweist, wohl aber, daß damals schon in Deutschland eine ähnliche Abschiedsformel gebräuchlich gewesen sein muß.

Wenn der Ruodlieb im französischen Sprachgebiet entstand, wie kommt denn die Hs. nach Tegernsee? Nach Wilmotte ist die Frage ganz falsch gestellt: die Münchener Fragmente sind nur die Reste einer unter vielen, und daß sie in Bayern auftaucht, ist nur ein Beweis dafür, daß das Gedicht sehr beliebt und außerordentlich verbreitet gewesen ist. Das ist allerdings etwas ganz Neues. Seit Schmeller, dem ersten Herausgeber, hat noch niemand daran gezweifelt, daß wir das Original haben (vgl. Seiler S. 9ff.). Das Wichtigste ist, daß die Hs. zahlreiche Korrekturen aufweist, die während des Schreibens ausgeführt wurden, so daß wir gelegentlich einen Vers gleichsam entstehen sehen.

Ein besonders instruktives Beispiel ist VII 21. Der Ritter ist gastfreundlich aufgenommen worden. Nach dem Essen läßt der Wirt einen Becher Wein kommen, nippt daran und schickt ihn dann dem Gaste, *fertur ei vinum, de quo bibit et sibi misit*. Darauf folgte der Vers

*Cuius in amore dederat sibi que bibit ipse.*

Er war mißglückt, so tilgte denn der Schreiber *in* und *sibi*, setzte letzteres über *dederat* und über das frühere *sibi* que schrieb er *quatinus*; der Vers sollte offenbar lauten

*Cuius amore sibi dederat quatinus bibit ipse.*

Auch das war unmöglich, so strich er ihn kurz entschlossen durch und ging zu Bett. Am folgenden Tage oder auch später — von V. 21 an ist andere Tinte verwandt — setzte er von neuem an und schrieb nun in einem Zuge

*Qui dederat domine prius et post ebibit ipse.*

Oder IV 178. Der König fragt: Wann soll die Zusammenkunft sein? Darauf der Bote

*Ebdomade cum pretereunt, ait, inducie sunt.*

Das wichtigste Wort, die Zahl, war nicht untergebracht, so strich der Schreiber *ait* und setzte *tres* darüber. Wie will man denn diese und andere Fälle erklären als durch die Annahme, daß der Dichter auch der Schreiber ist? Daran ist gar nicht zu rütteln. Auch dies weiß Wilmotte besser: der Text ist das Produkt eines im Lateinischen höchst mangelhaft unterrichteten Dichters — hier ist schon wieder vergessen, daß der Vorwurf höchstens den Übersetzer treffen könnte — und eines um so gebildeteren Schreibers,

der jenem bei der Tätigkeit des Kopierens zugleich das Latein verbesserte.<sup>1)</sup> Die armen Leser der vielen andern leider verlorenen Hss. haben sich also mit einem ganz barbarischen und dabei, wie die beiden beigebrachten Beispiele zeigen, teilweise geradezu unsinnigen Text behelfen müssen, und man kann sie nur bewundern, daß sie ihm trotzdem soviel Geschmack abgewannen; ein wahres Glück für uns, daß sich gerade der von einem anständigen Lateiner revidierte Text erhalten hat. Ob der Verf. sich die Mühe gemacht hat, diesen Einfall wirklich zu Ende zu denken? Er führt 3 Stellen an, die seine Theorie allerdings zulassen: 1. VIII 9 der Imperativ *inspira* durch den höflicheren Konjunktiv ersetzt; 2. I 23, wo *ad fodrum* steht und *annonae* überschrieben ist, *le barbarisme 'ad fodrum' écarté grâce à l'ingénieux emploi de 'annonae'*, wobei sich allerdings die scherzhafte Tatsache ergeben würde, daß der Franzose das deutsche *ad fodrum* schrieb, während der deutsche Schreiber es als barbarisch tilgte; 3. V 144 *'alter' pour 'alius' condamné par la grammaire*. Auch merkwürdig, denn bekanntlich ist *alius* im Französischen verloren gegangen und durch *alter*, *autre* ersetzt worden. Was stand denn im französischen Urtext? Dieser kurzen Aufzählung fügt Wilmotte dann ein *etc. etc.* an, das ist, milde ausgedrückt, sehr ungenau, der harmlose Leser wird dadurch doch zu dem Glauben gebracht, die anderen Fälle seien ähnlich. Verfällt er aber doch auf den Gedanken, die Sache nachzuprüfen, so kann er sein blaues Wunder erleben.<sup>2)</sup> Der firme Grammatiker tilgte z. B. V 605 die zweite Hälfte des Verses und schrieb dafür das wundervolle *miror quod non video quam*. (Dieser Gebrauch des Relativums ist so charakteristisch für den Stil des Ruodlieb — vgl. z. B. V 67. 106. Seiler S. 118 f. —, daß die eine Stelle genügt, den Verf. ad absurdum zu führen.) VI 54 schrieb er *si* für *etiamsi*, der Vers ist kaum zu verstehen. III 65 schrieb der Dichter *illi venerunt et . . stelerunt*, der bayerische Schreiber *illi conveniunt et . . stelerunt*, während nach Wilmotte gerade das mangelnde Gefühl für den Unterschied der Tempora der Vergangenheit Zeichen französischen Ursprungs sein soll (La p. d. W. S. 24. 29, 1.); Und was muß sich der Dichter sonst noch aufpacken lassen! VII 79 lautete

*Posthac hec hera sit mea agat et sibi quodque placebit,*

bevor der Schreiber ihn verbesserte. Mit welchem Recht behauptet Wilmotte, daß der Dichter dies Monstrum nicht bemerkt hätte? Daß er sonst die Elision streng vermied, wird er ja doch wohl nicht leugnen. Und schließlich muß man fragen, wieviel wir bei dieser Annahme von dem echten Gedicht haben, wieviel dem Schreiber gehört. Eine ganze Reihe von Versen ist teils vollständig getilgt, teils zur Hälfte neu gemacht. Soll man nun glauben, diese hätten einfach gestrichen werden können, ohne daß die Umgebung dadurch in Mitleidenschaft gezogen worden wäre? Den nächstfolgenden wird man doch mindestens dem verbessernden Schreiber zuweisen müssen, wie es VII 21 besonders deutlich ist. Am Ende kommen wir auf dem gewiesenen Wege doch noch wieder zu dem Tegernseer Dichter zurück?

Aber die segensreiche Tätigkeit des gelehrten Bayern geht noch viel weiter, mit seiner Hilfe werden Tatsachen bei Seite geschafft, aus denen auf den ersten Blick die Unsinnigkeit der These Wilmottes erhellt, der Liebesgruß mit seinen deutschen Vokabeln *liebes . . loubes, wunna . . minna* XVII 12 u. 67, und das Heldenepos mit den deutschen Namen. Dem Schluß unseres Gedichtes ist ja

<sup>1)</sup> S. 379 *'l'auteur médiocrement familier avec l'écriture latine und un transcripteur plus lettré, un copiste instruit, une deuxième personne plus versée dans la connaissance du bon latin.'*

<sup>2)</sup> Vgl. die Anm. 1 S. 297.

leider durch die fragmentarische Erhaltung besonders übel mitgespielt worden, und um das Unglück vollständig zu machen, ist die Anordnung der Fragmente hier durch den Herausgeber verfehlt worden; erst Laistner hat mit großem Scharfsinn Licht in die Sache gebracht, so daß man den Ruodlieb ohne seine Rezension überhaupt nicht lesen kann. Und auch eine andere Schwierigkeit hat er unter fast allgemeinem Beifall gehoben. Der Held der Erzählung ist, wie es sich für ein echtes Märchen geziemt, namenlos ebenso wie die andern Personen. Im letzten Viertel des Gedichtes aber trägt er plötzlich den Namen Ruodlieb, und am Schluß findet sich ein Stück, das völlig aus dem Charakter des Vorhergehenden herausfällt, es ist echte Heldensage mit einer ganzen Reihe benannter Personen. Und in diesem letzten Teil beobachtete Laistner auch gewisse Abweichungen in Prosodie, Metrik und Wortschatz. So kam er zu der Hypothese, der Dichter hätte aus irgendeinem Grunde sich entschlossen, sein Märchenepos mit einem alten Heldengedicht von Ruodlieb<sup>1)</sup>, einem 'Ruodliebus', zu verschmelzen. Von dem Augenblick des Entschlusses an gab er seinem Helden den Namen, und zwar wird dieser in der hübschen Szene eingeführt, wo ein Knabe, auf einem Kirschbaum sitzend, die Ankunft gar nicht erwarten kann und immer vor sich hinspricht *Ruodlieb here curre venique*. Unvollendet sei das Gedicht geblieben, weil der Dichter es leid wurde, den ihm vorliegenden Text abzuschreiben. In dieser Form wird sich die Hypothese nun freilich nicht halten lassen, weil die Ähnlichkeit des letzten Stückes mit den vorhergehenden Partien doch so groß ist, daß man unmöglich glauben kann, daß Werke von zwei verschiedenen Dichtern vorliegen; deshalb nahm Kögel, wie mir scheint mit Recht, an, der Dichter habe ein Ruodliebepos, das er selbst einmal verfaßt hatte, hervorgezogen. Daß er freilich nur, weil er des Schreibens überdrüssig wurde, abgebrochen habe, kann ich nicht recht glauben, denn er schrieb nicht einfach ab, sondern verbesserte auch hier wie bei den anderen Stücken; vielleicht erkannte er, daß es einfacher sei, die Korrekturen in seinem alten Manuskript vorzunehmen und dies an das seines Märchenepos anzuheften, wo es dann verloren ging. Wie dem auch sein mag, die Vermutung leistet, soviel eine Vermutung eben leisten kann, sie behebt die zweifellos vorliegenden Schwierigkeiten. Volle Sicherheit ist ja in einem solchen Falle nicht zu gewinnen. Hören wir nun Herrn Wilmotte! Im Bewußtsein seiner Überlegenheit ruft er aus: '*Que de complications inutiles!*' (S. 381 Note). Er sieht keine Schwierigkeiten. Was er an die Stelle von Laistners Ausführungen setzt, ist auch wirklich kinderleicht, aber trotzdem geht mir dabei der Atem aus, und ich muß mich begnügen seine eignen Worte hierher zu setzen (S. 381):

*'Je passe sous silence toute une série d'autres hypothèses, beaucoup plus audacieuses encore et où se joue l'imagination d. M. Laistner (Anz. f. d. A. IX 72. 73). Mais je*

<sup>1)</sup> Für unser Thema ist es nicht gleichgültig, daß der Name neuerdings in Süddeutschland nachgewiesen ist. Nekrol. v. Lilienfeld MG. Necrol. V 378 Mart. 2 von einer Hand des XIV. Jahrh. *Margareta de Pach et filius eius Rudlibus*. Nekrol. von Zwettl Necrol. V 569 Jan. 1, um 1200 geschrieben, *Ruodlibus*. Aus der Maasgegend hat W. nichts dgl. beigebracht

reliens, parce que l'étude attentive du texte les confirme, les remarques ingénieuses de ce critique sur l'omission du nom de Rodlieb dans les trois premiers quarts de l'œuvre conservée, sur l'étrangeté de l'épisode final, qui atteste une pensée étrangère, sur les memes dissemblances de style, de métrique et de grammaire entre les derniers fragments et les premiers. Pour expliquer ces anomalies, il suffit d'admettre, que le manuscrit de Tegernsee est l'œuvre d'un remanieur, travaillant sur un texte écrit avec des préoccupations différentes des siennes. Ce n'est pas un simple hasard qui lui a fait insérer dans ce texte (la place qu'ils y occupent les localise et les date nettement) les noms propres teutons (Rodlieb, Immunch, Hastunch (!), Heriburg) et les quelques mots d'allemand qui, dans un passage où rien n'en justifiait leur introduction, sont mis assez plaisamment dans la bouche d'une femme de mœurs légères' (sc. Liebesgruß!). Kein Wort weiter!

Da ich nicht dazu da bin, Wilmottes Rätsel zu raten, lasse ich dahingestellt sein, was diese orakelhaften Expektionen bedeuten sollen, und begnüge mich mit der Bemerkung, daß wir gar nicht erfahren, ob dieser *remanieur* mit dem besprochenen klugen Schreiber identisch ist — meine obige Annahme war nur ein Versuch, dem Verf. zu Hilfe zu kommen — oder ob noch ein anderer kluger Mann eingeführt wird, der die Rücksichtslosigkeit beging, der Dame *les quelques mots d'allemand* in den Mund zu legen, obwohl das durch nichts gerechtfertigt war, vielmehr Wilmottes Theorie bedenklich ins Wanken bringt. Wir hätten dann glücklich vier Arbeiter an dem Werk, den Dichter des französischen Textes, den Übersetzer, den gelehrten Abschreiber und den *remanieur*. Ganz scherzhaft ist es, daß dieser *remanieur* nachher wieder den Laufpaß erhält, für den gedankenlosen Leser hat er ja seine Schuldigkeit getan, und so gehören diese deutschen Worte schließlich doch dem Franzosen.

Ganz so leicht hat der Verf. es sich mit Fragm. XIII, dem Fischzug, doch nicht gemacht. Der Held ist in allen Künsten wohl bewandert; so hat er auch ein wunderbares Mittel Fische zu fangen. Das Kraut Buglossa wird getrocknet, zerrieben und mit Mehl vermischt. Aus der Masse formt man Pillen und wirft sie ins Wasser. Die Fische, welche sie verschlucken, können nicht wieder untertauchen und werden mühelos mit einer Gerte ans Ufer getrieben.<sup>1)</sup> Diese merkwürdige Art der Fischweide macht dem Dichter solchen Spaß, daß er sie zweimal schildert; zum zweitenmal zeigt der Ritter sie auf dem Edelsitze, wo er auf der Rückreise eingekehrt ist, und hier wird ein langer Katalog der gefangenen Fische gegeben; einzelne sind lateinisch benannt, sehr viele aber auch deutsch, so daß wir hier, wie Kögel bemerkt, den ersten deutschen Hexameter haben: XIII 41 *Prahsina, lahs, charpho, tinco, barbatulus, orvo*; das kann auch ein Wilmotte nicht wegdisputieren. Ist es denkbar, daß ein Dichter in Frankreich den Fischen deutsche Namen gab? Aber wer behauptet denn, daß das Gedicht im Innern Frankreichs entstand? Was hindert uns den Dichter unter den Anwohnern der Maas zu suchen, in der Nähe der Sprachgrenze? Das hat Pater

<sup>1)</sup> Es ist noch wenig beachtet worden, daß ein ungenanntes Kraut in den 'Virtutes herbarum' Zs. f. d. A. XXIII 354 dieselben wunderbaren Eigenschaften hat. Vorher geht eine Lücke; Fr. Wilhelm, Münch. Mus. III 153 vermutet mit höchster Wahrscheinlichkeit, daß sie den Namen *Buglossa* verschlungen hat. Der Traktat ist in einer süddeutschen Hs. erhalten.

Lamormain allerdings wohl ausgesonnen; an der Sprachgrenze kann man natürlich nach Belieben deutsche und französische Wörter einsetzen, wie es paßt. Der Dichter zeigt ein großes Interesse an der Fischerei, aber das hat nichts Auffallendes, wenn er in einem Lande mit fischreichen Flüssen lebte. Der Text muß hier freilich ein klein wenig frisiert werden, aber dann paßt er auch vortrefflich für die Maas. Wilmotte behauptet nämlich, der Dichter zähle die Fische auf, die ein ungenannter Fluß berge. Im Text dagegen steht ziemlich deutlich, V 37: *quot . . lacus is generaret*<sup>1)</sup>, und es ist ja auch wohl klar, daß diese Art der Fischerei im Flusse ihre Schwierigkeit gehabt hätte. Dort also an der Sprachgrenze nannte der Franzose die Fische mit deutschen Namen! Beweis: Noch heute sagt der Wallone *aspiringue* für den geräucherten Hering! Jammerschade, daß der Dichter sich das entgehen ließ; es hätte doch einen Hauptspaß, *nimius risus manuum plaususve cachinnus* gegeben, wenn der Ritter mit seinem Wunderkraut holländische Bücklinge aus dem Schloßteich hervorgezaubert hätte. Außerdem sagt man in jener Gegend *spitrai*, *hötich* (holländ. *houting*) und *maklote*. Von Ruodliebs Fischen ist leider keiner dabei, obwohl der Verf. eifrig gesucht hat. Oder doch? Unter den Fischen wird auch die *trutta digena*, *rufa vel alba* genannt, und in den Ardennenbächen leben weiße und rotgetüpfelte Forellen! (Wilmotte findet das ganz überraschend, *étonnamment*; bei Brehm hätte er seitenlange Auszüge aus Tschudi usw. darüber finden können). Ferner ist da der *rinanch*, und in Lüttich fängt man einen Fisch *ancrawe*. (Man bringt das Wort mit *ancorago* bei Cassiodor, Var. XII 4, 1 zusammen: *a Rheno veniat ancorago*). Wilmotte fügt hinzu: *et le rhénan 'anke'*. Was er damit sagen will, weiß ich nicht, hoffentlich will er uns nicht weismachen, daß im Unter-rhein oder gar in der Maas Renken gefangen werden. Ein Blick in die Lexika lehrt, und auch bei seinem Orakel Grandgagnage, Vocabulaire des noms wallons d'animaux usw. S. 18, der selbstverständlich ohne Titel und Seitenzahl zitiert wird, konnte er lesen, daß das Wort *anke* nur in Compositis, *rhinanch*, *illanch* usw. vorkommt. Er hat wohl nie an den oberbayrischen Seen die köstlichen Renken gegessen, sonst würde er sicherlich die Sache etwas ernsthafter behandelt haben. Unwiderleglich wird der Beweis schließlich durch die Mitteilung, daß Ausonius die Mosel fischreich nennt — er wird doch hoffentlich nicht *Mosa* und *Mosel* verwechselt haben! — und daß Sedulius Scottus wußte, daß in der Maas Fische lebten; ja, Johann von Gorze (Vita cap. 61) hat sogar schon Fische gegessen. Mir bleibt nur noch zu bemerken, daß der Mann, der uns diese erschütternden Aufklärungen bringt, sich über Laistners Bemühungen um die Fischnamen lustig zu machen wagt (*'s'est évertué dans cette voie, et avec assez peu de succès'* S. 396, 2).

Auch anderes spricht deutlich dafür, daß der Dichter ein Landsmann des Verf. war. VII 115 erscheint das Wort *secretum* für *latrina*. Noch heute nennt man an der Maas das bewußte Lokal *les secrètes*. Godefroy hat für Frankreich ein Beispiel, für Lüttich drei aus dem XV./XVI. Jahrh. Ich mußte lachen,

<sup>1)</sup> Vgl. S. 297 Anm. 1
